NEWS RELEASE

Enbridge commences construction of 400,000 bpd

Southern Access expansion

CALGARY, Alberta and HOUSTON, December 8, 2005 Enbridge Inc. (TSX/NYSE:ENB) and Enbridge Energy Partners, L.P. (NYSE:EEP) (the Partnership) today announced that they are commencing construction of their 400,000 barrel per day (bpd) Southern Access expansion project. The expansion received strong shipper support during last summer's Open Season and has been endorsed by the Canadian Association of Petroleum Producers (CAPP). CAPP's endorsement will permit Enbridge and the Partnership to file negotiated settlements for Canadian and U.S. regulatory approvals of tariff rate surcharges, using a cost-of-service-based tolling methodology. Fieldwork will commence immediately to ensure completion in early 2009, with capacity increases to start in 2007.

The Canadian portion of the expansion project from Hardisty, Alberta, to the international border near Neche, North Dakota, will be undertaken by Enbridge Inc. on its Canadian mainline system, at a cost of approximately US\$135 million in 2005 dollars.

The U.S. portion of the expansion will be undertaken on the Partnership's Lakehead System with the first stage to add 44,000 bpd of capacity in 2007 and up to an additional 146,000 bpd by early 2008. The first stage includes a new 30-inch pipeline between Superior and Delavan, Wisconsin, along with pump station enhancements upstream and downstream of this segment. The expansion project's second stage will add additional upstream pumping capacity and new pipeline from Delavan to Flanagan, Illinois, with completion in early 2009. At Flanagan, the new line will have access to Chicago and will interconnect with Enbridge Inc.'s Spearhead Pipeline to provide access to Cushing, Oklahoma. Completion of the total Southern Access expansion project will create a new 454-mile pipeline and will add 400,000 bpd of incremental capacity to the Lakehead System. The total cost of the U.S. portion of the expansion is currently estimated at US\$815 million (2005 dollars) including estimated tankage requirements.

The expansion project is the first part of the overall Southern Access Program, which also involves an extension of the mainline system from Flanagan south to the major pipeline hub at Patoka, Illinois. The extension is planned to provide 300,000 bpd of capacity to move Canadian crude to new markets south of Chicago, at a cost of approximately U.S. \$250 million. The extension will be undertaken by Enbridge Inc. but will be integrated with the Partnership's mainline system for tolling purposes.

Patrick D. Daniel, President & Chief Executive Officer of Enbridge Inc., said, "We've worked closely with customers to arrive at the optimum pipeline solution to meet their needs to access markets of choice. The Southern Access expansion is one of the cornerstones of a broader market access strategy undertaken by Enbridge and the Partnership to provide timely, economical, integrated transportation solutions to connect growing supplies of production from Alberta's oil sands to key refinery markets in the U.S. Midwest and beyond.

Daniel added, "The mainline expansion will ensure adequate capacity to Chicago, at favorable tolls, through 2009. With the mainline expansion component of the strategy now under way, our next priority will be to finalize discussions with shippers and CAPP on the Southern Access extension. Together the Southern Access expansion and extension form a pipeline network that will provide lower tolls than any other alternative for transportation of Canadian crude to U.S. destinations beyond Chicago, including Patoka, Wood River, Cushing and the U.S. Gulf Coast.

Additional information on the Southern Access Program is posted at www.enbridgepartners.com.

ABOUT ENBRIDGE ENERGY PARTNERS

Enbridge Energy Partners, L.P. owns and operates a diversified portfolio of crude oil and natural gas transportation systems in the U.S. Its principal crude oil system is the largest transporter of growing oil production from western Canada. The system's deliveries to refining centers in the U.S. Midwest account for approximately 10 percent of total U.S. oil imports; while deliveries to Ontario, Canada satisfy approximately 60 percent of refinery demand in that region. The Partnership's natural gas gathering, treating, processing and transmission assets, which are principally located onshore in the active U.S. Mid-Continent and Gulf Coast area, deliver more than 2 billion cubic feet of natural gas daily. Enbridge Energy Management, L.L.C. (NYSE:EEQ) (www.enbridgemanagement.com) manages the business and affairs of the Partnership and its principal asset is an approximate 18 percent interest in the Partnership. Enbridge Energy Company, Inc., an indirect wholly owned subsidiary of Enbridge Inc. is the general partner and holds an approximate 11 percent interest in the Partnership.

ABOUT ENBRIDGE INC.

Enbridge Inc. (www.enbridge.com) is a leader in energy transportation and distribution in North America and internationally. As a transporter of energy, Enbridge operates, in Canada and the United States, the world's longest crude oil and liquids pipeline system. Enbridge also has international operations and a growing involvement in the natural gas transmission and midstream businesses. As a distributor of energy, Enbridge owns and operates Canada's largest natural gas distribution company, which provides distribution services in the provinces of Ontario and Quebec, and in New York State; and is developing a gas distribution system for the Province of New Brunswick. Enbridge is a Canadian company and its common shares trade on the Toronto Stock Exchange in Canada and on the New York Stock Exchange in the United States under the symbol ENB.

LEGAL NOTICE

When used in this news release, words such as anticipates, expects, plans, will and similar expressions are intended to identify forward-looking statements. Such statements are subject to certain risks, uncertainties and assumptions pertaining to factors such as: (1) changes in the demand for, or the supply of, and price trends related to crude oil and natural gas liquids; including the rate of development of the Alberta Oil Sands; (2) changes in or challenges to Enbridge Partners' tariff rates; (3) the effects of competition, including by other pipeline systems; (4) regulatory approvals; and (5) performance of other parties. Reference should also be made to Enbridge Partners' filings with the U.S. Securities and Exchange Commission, including its Annual Report on Form 10-K for the most recently completed fiscal year, for additional factors that may affect results. These filings are available to the public over the Internet at the SEC's web site (www.sec.gov) and via Enbridge Partners' web site.

NEWS RELEASE

Enbridge to acquire 65% interest in Olympic Pipe Line Company

CALGARY, Alberta, December 12, 2005 Enbridge Inc. (TSX, NYSE: ENB) today announced that it will acquire a 65% common share interest in the Olympic Pipe Line Company (Olympic) from Arco MidCon LLC, a wholly owned subsidiary of BP, for a total consideration of US\$101.9 million, which includes Enbridge's share of existing shareholder debt. Closing of the purchase is anticipated to occur by year end, subject to receipt of regulatory approvals and customary closing conditions. The acquisition is expected to be immediately accretive to earnings per share. Olympic owns the largest refined products pipeline in the State of Washington, transporting approximately 290,000 barrels per day (bpd) of gasoline, diesel and jet fuel. The pipeline system extends 480 kilometres (300 miles) from Blaine, Washington to Portland, Oregon, connecting four Puget Sound refineries to terminals in Washington and Portland. Olympic delivers refined product to terminals in Washington (Seattle, Renton, Tacoma, Olympia, Vancouver) and Portland. Olympic is the sole supplier of jet fuel to the Seattle-Tacoma International Airport and is a major supplier to the Portland International Airport. The system consists of 640 kilometres (400 miles) of 6-to-20-inch diameter pipe, a 500,000-barrel products terminal, 9 pumping stations and 21 delivery points or facilities. Arco MidCon LLC will continue to own the remaining 35% interest and BP Pipelines (North America) Inc. will remain in its role as operator of the pipeline system.

The investment in Olympic Pipe Line Company is consistent with the Enbridge strategy of investing in stable energy infrastructure assets that come with strong organic growth opportunities, said J. Richard Bird, Enbridge Group Vice President, Liquids Pipelines. This investment enables Enbridge to enter the U.S. refined products pipeline business in a growing market and new geographic region. It also further expands and diversifies the investment base of Enbridge and provides an important window into the U.S. West Coast market.

Enbridge Inc., a Canadian company, is a leader in energy transportation and distribution in North America and internationally. As a transporter of energy, Enbridge operates, in Canada and the U.S., the world's longest crude oil and liquids transportation system. The Company also has international operations and a growing involvement in the natural gas transmission and midstream businesses. As a distributor of energy, Enbridge owns and operates Canada's

largest natural gas distribution company, and provides distribution services in Ontario, Quebec, New Brunswick and New York State. Enbridge employs approximately 4,400 people, primarily in Canada, the U.S. and South America. Enbridge's common shares trade on the Toronto Stock Exchange in Canada and on the New York Stock Exchange in the U.S. under the symbol ENB. Information about Enbridge is available on the Company's web site at www.enbridge.com.

NEWS RELEASE

**Enbridge announces successful conclusion
of Gateway Pipeline Open Season**

CALGARY, Alberta, December 19, 2005 Enbridge Inc. (TSX/NYSE: ENB) today announced that the Open Season for the Gateway Petroleum Export Pipeline concluded successfully on December 16, 2005. Non-binding indications of interest in excess of the 400,000 barrels per day (bpd) economic threshold were received.

The Petroleum Export Pipeline will provide low-cost transportation from the origination of Gateway at Edmonton, Alberta, to the west coast of British Columbia, at Kitimat, then via marine transport to Asia and U.S. west coast markets. The additional pipeline capacity will be required to provide expanded market access for crude oil expected to be produced in growing amounts from Alberta's oil sands. The Petroleum Export Pipeline is one component of the Gateway Project, which also involves a Condensate Import Pipeline. Enbridge is also working to conclude negotiation of precedent agreements with the potential condensate pipeline shippers.

Commenting on the Open Season results, J. Richard Bird, Enbridge Group Vice President, Liquids Pipelines said, "The response to the Open Season exceeded our expectations and supports continued preparations to file a full regulatory application in 2006, following the Preliminary Information Package filed earlier this year. Based on the level of subscriptions, we will look at increasing the planned pipeline diameter from 30 inches to 36 inches. At throughput levels above 400,000 bpd, the 36-inch line would permit a significant reduction in tolls. Together with the synergies we can now plan on from constructing the condensate line and the crude line in tandem, the increased scale for both pipelines would provide a very economical pipeline system.

Enbridge will work with the shippers who participated in the Open Season to finalize binding precedent agreements and initial pipeline capacity. The regulatory application will be filed following completion of binding agreements for both pipelines, subject to satisfactory completion of the environmental assessment and mitigation plan, and public and aboriginal consultation.

NEWS RELEASE

Enbridge files regulatory application for Waupisoo Project

CALGARY, Alberta, December 22, 2005 Enbridge Pipelines (Athabasca) Inc., a wholly owned subsidiary of Enbridge Inc., has filed an application for regulatory approval for the Waupisoo Pipeline Project with the Alberta Energy and Utilities Board and other provincial government departments. Subject to regulatory approval in mid-2006, the expected in-service date of the pipeline is mid-2008.

Enbridge will construct the 30-inch diameter, 380-kilometre long Waupisoo Pipeline at an estimated cost of Cdn\$400 million (in 2005 dollars) to transport crude oil from the Alberta oil sands to the Edmonton area refinery hub. The line's initial capacity will be 350,000 barrels per day with a maximum capacity of 600,000 barrels per day. The Waupisoo Project's scope also includes a 16-inch diluent return line, which would operate from the Edmonton area refinery hub north to the oil sands region, and would be constructed in conjunction with the Waupisoo crude oil pipeline. The estimated cost of the diluent line is approximately Cdn\$200 million.

On September 9, 2005, Enbridge announced that it has reached an agreement on long-term crude oil shipping commitments on the Waupisoo Pipeline with a group of founding shippers. Shipping commitments have not been finalized on the diluent line.

The Waupisoo Pipeline will initiate at Enbridge's Cheecham Terminal on the Athabasca Pipeline and terminate adjacent to Enbridge's mainline Edmonton Terminal. The pipeline route, which was defined through the project's public consultation process and field studies, was selected to minimize impact on environmentally sensitive areas, aboriginal traditional territories and agricultural lands.

Enbridge Inc., a Canadian company, is a leader in energy transportation and distribution in North America and internationally. As a transporter of energy, Enbridge operates, in Canada and the U.S., the world's longest crude oil and liquids transportation system.
