Securities Registered Pursuant to Section 12(b) of the Act:

Title of Each Class:

Common Stock, par value \$0.01 per share

Name of Exchange on Which Registered:

New York Stock Exchange

Securities registered pursuant to Section 12(g) of the Act: **None**

Indicate by check mark if the registrant is a well-known seasoned issuer, as defined in Rule 405 of the Securities Act. Yes ☐ No ☒

Indicate by check mark if the registrant is not required to file reports pursuant to Section 13 or Section 15(d) of the Exchange Act. Yes ☐ No ☒

Indicate by check mark whether the registrant (1) has filed all reports required to be filed by Section 13 or 15(d) of the Securities Exchange Act of 1934 during the preceding 12 months (or for such shorter period that the registrant was required to file such reports), and (2) has been subject to such filing requirements for the past 90 days. Yes ☒ No ☐

Indicate by check mark if disclosure of delinquent filers pursuant to Item 405 of Regulation S-K (§229.405 of this chapter) is not contained herein, and will not be contained, to the best of registrant's knowledge, in definitive proxy or information statements incorporated by reference in Part III of this Form 10-K or any amendment to this Form 10-K. ☒

Indicate by check mark whether the registrant is a large accelerated filer, an accelerated filer or a non-accelerated filer. See definition of "accelerated filer and large accelerated filer" in Rule 12b-2 of the Exchange Act. (Check one):

Large accelerated filer ☐ Accelerated filer ☒ Non-accelerated filer ☐ Smaller reporting company ☐

Indicate by check mark whether the registrant is a shell company (as defined in Rule 12b-2 of the Exchange Act).
Yes ☐ No ☒

At June 30, 2008, the aggregate market value of the registrant's common stock held by non-affiliates of the registrant was \$491,007,240 based on the closing sale price as reported on the New York Stock Exchange.

The number of shares of the registrant's Common Stock outstanding on February 25, 2008 was 60,222,048.

DOCUMENTS INCORPORATED BY REFERENCE

Portions of the registrant's definitive Proxy Statement to be filed with the Securities and Exchange Commission under Regulation 14A within 120 days after the end of registrant's fiscal year covered by this Annual Report are incorporated by reference into Part III.

PART I

ITEM 1. BUSINESS

Introduction

Redwood Trust, Inc., together with its subsidiaries, is a financial institution focused on investing in, financing, and managing residential and commercial real estate loans and securities. We seek to invest in assets that have the potential to provide cash flow returns over a long period of time and support our goal of distributing attractive levels of dividends to our stockholders. For tax purposes, we are structured as a real estate investment trust, or REIT. We are able to pass through substantially all of our earnings generated at our REIT to our stockholders without paying income tax at the corporate level. We pay income tax on the REIT taxable income we retain and on the income we earn at our taxable subsidiaries. Redwood was incorporated in the State of Maryland on April 11, 1994, and commenced operations on August 19, 1994. Our executive offices are located at One Belvedere Place, Suite 300, Mill Valley, California 94941.

All references to 2008, 2007, and 2006 refer to our fiscal years ended December 31, 2008, December 31, 2007, and December 31, 2006, respectively. References herein to Redwood, the company, we, us, and our include Redwood Trust, Inc. and its consolidated subsidiaries, unless the context otherwise requires.

Our primary real estate investments include investments in real estate loans and securities, investments in the securitization entities that we sponsor, and investments in a private fund that we sponsor.

Financial information concerning our business for each of 2008, 2007, and 2006 is set forth in Management's Discussion and Analysis of Financial Condition and Results of Operations, the consolidated financial statements and the notes thereto, and the supplemental financial information, which are in Part II, Items 7, 7A, and 8 of this Annual Report on Form 10-K.

Our web site can be found at www.redwoodtrust.com. We make available free of charge on, or through the investor information section of our website, access to our annual reports on Form 10-K, quarterly reports on Form 10-Q, current reports on Form 8-K, and amendments to those reports filed or furnished pursuant to Section 13(a) or 15(d) of the U.S. Securities Exchange Act of 1934 as well as proxy statements, as soon as reasonably practicable after we electronically file such material with, or furnish it to, the U.S. Securities and Exchange Commission (SEC). We also make available, free of charge, access to our Corporate Governance Standards, charters for our Audit Committee, Compensation Committee, and Corporate Governance and Nominating Committee, our Corporate Governance Standards, and our Code of Ethics governing our directors, officers, and employees. Within the time period required by the SEC and the New York Stock Exchange, we will post on our web site any amendment to the Code of Ethics and any waiver applicable to any executive officer, director, or senior officer (as defined in the Code). In addition, our web site includes information concerning purchases and sales of our equity securities by our executive officers and directors, as well as disclosure relating to certain non-GAAP financial measures (as defined in the SEC's Regulation G) that we may make public orally, telephonically, by webcast, by broadcast, or by similar means from time to time.

The information on our website is not part of this Annual Report on Form 10-K.

Our Investor Relations Department can be contacted at One Belvedere Place, Suite 300, Mill Valley, CA 94941, Attn: Investor Relations, telephone (866) 269-4976.

Cautionary Statement

This Annual Report on Form 10-K and the documents incorporated by reference herein contain forward-looking statements within the meaning of the safe harbor provisions of the Private Securities Litigation Reform Act of 1995. Forward-looking statements involve numerous risks and uncertainties. Our actual results may differ from our beliefs, expectations, estimates, and projections and, consequently, you should not rely on these forward-looking statements as predictions of future events. Forward-looking statements are not historical in nature and can be identified by words such as anticipate, estimate, will, should, expect, believe, intend, seek, plan and similar expressions or forms, or by references to strategy, plans, or intentions. These forward-looking statements are subject to risks and uncertainties, including, among other things, those described in this Annual Report on Form 10-K under

2

TABLE OF CONTENTS

the caption Risk Factors. Other risks, uncertainties, and factors that could cause actual results to differ materially from those projected are described below and may be described from time to time in reports we file with the Securities and Exchange Commission (SEC), including reports on Forms 10-Q and 8-K. We undertake no obligation to update or revise any forward-looking statements, whether as a result of new information, future events, or otherwise.

Statements regarding the following subjects, among others, are forward-looking by their nature: (i) the ability of our current and future investments to generate attractive future cash flows and returns with a comfortable margin of safety, (ii) our belief that our common stock offering in January 2009, and the investment of the proceeds thereof, will be accretive to our future financial results and significantly extend the duration of our investment cash flows, (iii) our expectation that we will generate over \$100 million in positive cash flow from existing investments after operating and interest expenses in 2009, (iv) our expectations regarding future declines in home values, (v) our credit loss expectations for investments in investment grade securities and the sensitivity of investment grade securities to credit risk, (vi) our Board of Directors' intention to pay a regular quarterly dividend of \$0.25 per share in 2009, and (vii) our belief that government initiatives could result in an increase in mortgage prepayment rates.

Important factors, among others, that may affect our actual results include: changes in interest rates; changes in mortgage prepayment rates; the timing of credit losses within our portfolio; our exposure to adjustable-rate and negative amortization mortgage loans; the state of the credit markets and other general economic conditions, particularly as they affect the price of earning assets and the credit status of borrowers; the concentration of the credit risks we are exposed to; the ability of counterparties to satisfy their obligations to us; legislative and regulatory actions affecting the mortgage industry or our business; the availability of high quality assets for purchase at attractive prices; declines in home prices and commercial real estate prices; increases in mortgage payment delinquencies; changes in the level of liquidity in the capital markets which may adversely affect our ability to finance our real estate asset portfolio; changes in liquidity in the market for real estate securities, the re-pricing of credit risk in the capital markets, inaccurate ratings of securities by rating agencies, rating agency downgrades of securities, and increases in the supply of real estate securities available-for-sale, each of which may adversely affect the values of securities we own; the extent of changes in the values of securities we own and the impact of adjustments reflecting those changes on our income statement and balance sheet, including our stockholders' equity; our ability to maintain the positive stockholders' equity necessary to enable us to pay the dividends required to maintain our status as a real estate investment trust for tax purposes; our ability to generate the amount of cash flow we expect from our investment portfolio; changes in our investment, financing, and hedging strategies and the new risks that those changes may expose us to; changes in the competitive landscape within our industry, including changes that may affect our ability to retain or attract personnel; our failure to manage various operational risks associated with our business; our failure to maintain appropriate internal controls over financial reporting; our failure to properly administer and manage our securitization entities; risks we may be exposed to if we expand our business activities, such as risks relating to

significantly increasing our direct holdings of loans; limitations imposed on our business due to our REIT status and our status as exempt from registration under the Investment Company Act of 1940; our ability to successfully deploy the proceeds from our recent common equity offering and raise additional capital to fund our investing activity; and other factors not presently identified. Fair values for our securities and ABS issued are dependent upon a number of market-based assumptions including future interest rates, prepayment rates, discount rates, credit loss rates, and the timing of credit losses. We use these assumptions to generate cash flow estimates and internal values for each individual security.

This Annual Report on Form 10-K may contain statistics and other data that in some cases have been obtained from or compiled from information made available by servicers and other third-party service providers.

Certifications

Our Chief Executive Officer and Chief Financial Officer have executed certifications dated February 25, 2009, as required by Sections 302 and 906 of the Sarbanes-Oxley Act of 2002, and we have included those certifications as exhibits to this Annual Report on Form 10-K. In addition, our Chief Executive Officer

3

TABLE OF CONTENTS

certified to the New York Stock Exchange (NYSE) on June 20, 2008 that he is unaware of any violations by Redwood Trust, Inc. of the NYSE's corporate governance listing standards in effect as of that date.

Employees

As of December 31, 2008, Redwood employed 79 people.

ITEM 1A. RISK FACTORS

The following is a summary of the risk factors that we believe are most relevant to our business. These are factors which, individually or in the aggregate, we think could cause our actual results to differ significantly from anticipated or historical results. In addition to understanding the key risks described below, investors should understand that it is not possible to predict or identify all risk factors, and consequently, the following is not a complete discussion of all potential risks or uncertainties. We undertake no obligation to update forward-looking statements, whether as a result of new information, future events, or otherwise. Investors are advised, however, to review any further disclosure we make in our reports on Forms 10-Q and 8-K filed with the SEC.

The current turbulence in the financial markets and economy may adversely affect our business and these conditions may not improve in the near future. There can be no assurance that the actions of the U.S. government (including through the Treasury Department, the Federal Reserve System, and other governmental bodies), which are intended to stabilize the financial markets, will achieve the intended effect or that the intended effect would be beneficial to our business.

Recent market and economic conditions have been unprecedented and challenging with tighter credit conditions and slower growth through the end of 2008. Continued concerns about the systemic impact of inflation or deflation, energy costs, geopolitical issues, the availability and cost of credit, the U.S. mortgage market, and the declining real estate market in the U.S. have contributed to increased market volatility and diminished expectations for the U.S. economy. In the second half of 2008, added concerns fueled by the federal government conservatorship of the Federal Home Loan Mortgage Corporation (Freddie Mac) and the Federal National Mortgage Association (Fannie Mae), the declared bankruptcy of Lehman Brothers Holdings Inc., the infusion of capital into financial institutions under the U.S. government's Troubled Asset Relief Program (TARP), and other federal government interventions in the U.S. credit markets have led to increased market uncertainty and instability in both U.S. and international capital and credit markets. These conditions, combined with volatile oil prices, declining business and consumer confidence, and increased unemployment have contributed to volatility in domestic and international markets at unprecedented levels.

As a result of these market conditions, the cost and availability of credit has been and may continue to be adversely affected by illiquid credit markets and wider credit spreads. Concern about the stability of the markets and the strength of counterparties has led many lenders and institutional investors to reduce, and in some cases cease, lending to borrowers. Continued turbulence in the U.S. and international markets and economies may contribute to a continuing deterioration in the distressed housing market and in the credit performance and book value of our assets, limit our ability to access the capital markets, and adversely affect our financial condition and results of operations.

There can be no assurance that governmental actions will directly benefit our business or otherwise have a lasting and beneficial impact on the financial markets. For example, to the extent TARP does not function as intended to address conditions in the credit markets, our business may not be positively impacted. Alternatively, to the extent TARP is ultimately successful in stabilizing credit markets, it and other governmental actions may have the effect of influencing long-term interest rates in a manner that is not favorable to us. In addition, the federal government may, through its conservatorship of the Federal Home Loan Mortgage Corporation and the Federal National Mortgage Association, expand the breadth of its lending in the U.S. housing market, resulting in increased competition and diminishing our business expansion opportunities. The U.S. government, the Treasury Department, the Federal Reserve System, and other governmental agencies may be considering taking other actions to address the financial crisis that may not benefit us and could, in fact, harm our business. We cannot predict whether or when such actions may occur or what impact, if any, such actions could have on our business, results of operations, and financial condition.

TABLE OF CONTENTS

Mortgage loan modification programs and future legislative action may adversely affect the value of, and the returns on, mortgages and mortgage-related securities we own or may acquire in the future.

During the third quarter of 2008, the federal government, through the Federal Housing Administration and the Federal Deposit Insurance Corporation, commenced implementation of programs designed to provide homeowners with assistance in avoiding residential mortgage loan foreclosures. In addition, certain mortgage lenders and servicers have voluntarily, or as part of settlements with law enforcement authorities, established loan modification programs relating to the mortgages they hold or service. In January 2009, the President announced his Homeowner Affordability and Stability Plan, which is focused on reducing foreclosures. These programs may involve, among other things, the modification of mortgage loans to reduce the principal amount of the loans or the rate of interest payable on the loans, or to extend the payment terms of the loans. In addition, members of the U.S. Congress have indicated support for additional legislative relief for homeowners, including a proposed amendment of the bankruptcy laws to permit the modification of mortgage loans in bankruptcy proceedings. These loan modification programs, as well as future law

The current turbulence in the financial markets and economy may adversely affect our business and these conditions

enforcement and legislative or regulatory actions, including amendments to the bankruptcy laws that result in the modification of outstanding mortgage loans, may adversely affect the value of, and the returns on, the mortgage loans and the related mortgage securities we currently own or may acquire in the future.

Continued disruption in the mortgage securitization market may adversely affect our earnings and growth.

We have historically depended upon the issuance of mortgage-backed securities by the securitization entities we sponsor as a funding source for our business. However, due to current market conditions, we are not currently engaged in additional mortgage securitization transactions. We do not know when, or if, market conditions will allow us to restart our securitization business and the continued disruption of this market may adversely affect our earnings and growth. If mortgage securitization activity does resume among participants other than government sponsored entities, we do not know if it will be on terms and conditions that will permit us to participate or be favorable to us. Even if conditions are favorable to us, we may not be able to return to the volume of securitization activity we previously conducted. For example, the credit rating agencies have generally determined the amount of net investment we must make in a securitization entity to credit-enhance the securities issued by that entity. Increases in the amount of the net investment the credit agencies require us to make could adversely affect our ability to profitably sponsor new securitization entities.

If we fail to develop, enhance, and implement strategies to adapt to changing conditions in the mortgage industry and capital markets, our financial condition and earnings may be adversely affected.

The manner in which we compete and the products for which we compete are affected by changing conditions which can take the form of trends or sudden changes in our industry, regulatory environment, changes in the role of government sponsored entities, changes in the role of credit rating agencies or their rating criteria or process, or the U.S. economy more generally. If we do not effectively respond to these changes, or if our strategies to respond to these changes are not successful, our financial condition and earnings may be adversely affected.

Recently proposed legislation could alter the rights we have with respect to our Sequoia securitization entities, which could have business, operational, and legal compliance effects on us. This and other recently proposed legislation could also affect the exemptions from the Investment Company Act that we have historically relied on in structuring our business.

In January 2009, legislation was introduced in the Senate entitled the Hedge Fund Transparency Act and in February 2009 additional legislation was introduced in the Senate entitled the Real Estate Mortgage Investment Conduit Improvement Act of 2009. Although they have not been enacted into law, if enacted in their current forms each of these bills could affect our business, the way we structure our operations, and our compliance with various laws and regulations. In particular, they could affect rights relating to loan modifications with respect to loans held by our Sequoia mortgage securitization entities, the accounting treatment that applies to our Sequoia mortgage securitization entities, our ability to continue to satisfy the rules and tests that relate to our status as a REIT, and the exemptions we have relied on in structuring our business so as to not be subject to registration under the Investment Company Act.

Among other things, these

effects could result in increased losses resulting from loan modifications and increased costs of operating our business. Although it is difficult to fully assess the potential impacts on us at this time, they could be significant.

Political changes may alter the risks inherent in our business or result in changes in the industry we operate in, in each case in ways that may be adverse to our business.

The transition of control of the executive branch of the U.S. government and changes in the political make-up of the U.S. Senate and House of Representatives, particularly at a time of financial disruption and economic recession, could have long-term effects on our business that are difficult to assess. Changes in laws, regulations, or policies could negatively impact the housing market or the financial markets or could more directly and adversely affect our operations, the value of our investments, or the value of our common stock. For example, the U.S. Congress and various state and local legislatures are considering legislation, which, among other things, would permit limited assignee liability for certain violations in the mortgage loan origination process. We cannot predict whether or in what form Congress or various state and local legislatures may enact legislation affecting our business and we are also unable to predict how changes in regulations promulgated by federal, state, or local authorities may affect us.

Residential and commercial real estate loan delinquencies, defaults, and credit losses could reduce our earnings, dividends, cash flows, and access to liquidity, and otherwise negatively affect our business.

We assume credit risk with respect to residential and commercial real estate loans through the ownership of securities backed by residential and commercial real estate loans, collateralized debt obligation (CDO) securities backed by residential and commercial loans and real estate securities, and through residential and commercial real estate loans. Residential and commercial credit-enhancement securities (CES) have below investment-grade credit ratings and, correspondingly, a higher degree of credit risk with respect to the residential and commercial real estate loans within the securitizations that issued these securities as compared to investment grade securities (IGS).

Credit losses on residential real estate loans can occur for many reasons, including: poor origination practices; fraud; faulty appraisals; documentation errors; poor underwriting; legal errors; poor servicing practices; weak economic conditions; increases in payments required to be made by borrowers; declines in the value of homes; earthquakes and other natural events; uninsured property loss; over-leveraging of the borrower; costs of remediation of environmental conditions, such as indoor mold; changes in zoning or building codes and the related costs of compliance; acts of war or terrorism; changes in legal protections for lenders; and personal events affecting borrowers, such as reduction in income, job loss, divorce, or health problems. If the U.S. economy or the housing market continues to weaken, our credit losses could increase beyond levels that we originally anticipated or that we currently anticipate.

Rising interest rates may increase the credit risks associated with residential real estate loans. For example, the interest rate is adjustable for most of the loans securitized by securitization entities we have sponsored and for a portion of the loans underlying residential and CDO CES we have acquired from securitizations sponsored by others. Accordingly, when short-term interest rates rise, required monthly payments from homeowners will rise under the terms of these adjustable-rate mortgages, and this may increase borrowers' delinquencies and defaults.

Credit losses on commercial real estate loans can occur for many of the reasons noted above for residential real estate loans. Losses on commercial real estate loans can also occur for other reasons including decreases in the net operating income from the underlying property, which could be adversely affected by a weakened U.S. economy. Moreover, many commercial real estate loans are not fully amortizing and, therefore, the borrower's ability to repay the principal when due may depend upon the ability of the borrower to refinance or sell the property at maturity.

Recently proposed legislation could alter the rights we have with respect to our Sequoia securitization entities, which

The IGS we hold are exposed to the same types of credit-related risks described above. These assets initially received investment-grade ratings, but these initial ratings do not ensure that these securities will be free from credit losses, especially in a housing or economic downturn such as the one the U.S. is currently experiencing. In particular, certain of the IGS we hold are part of so-called shifting interest securitization structures, in which losses attributable to bankruptcy are distributed more evenly among IGS and CES issued

TABLE OF CONTENTS

as part of the same securitization. To the extent losses arise due to bankruptcy, which may occur more frequently if the proposed changes to the bankruptcy laws are enacted into law, IGS we hold may be exposed to significant losses.

We attempt to manage these risks by periodically evaluating our investments for impairment indicators and establishing reserves under GAAP for credit and other risks based upon our assessment of these risks. We cannot establish credit reserves for tax accounting purposes. The amount of capital and cash reserves that we hold to help us manage credit and other risks may prove to be insufficient to protect us from earnings volatility, reductions or suspensions in regular dividends, and liquidity issues. If these increased credit losses are greater than we anticipated and we need to increase our credit reserves or in the event that assets that have declined in value are deemed to be other-than-temporarily impaired, our GAAP earnings might be reduced. Increased credit losses may also adversely affect our cash flows, dividend distribution requirements and payments, asset fair values, access to short-term borrowings, and our ability to securitize assets.

The nature of the securities we hold exposes us to concentrated credit risk that could reduce our earnings, dividends, cash flows, and access to liquidity, and otherwise negatively affect our business.

Our residential and commercial CES have concentrated risks with respect to residential and commercial real estate loans, respectively. In general, losses on an asset securing a residential or commercial real estate loan included in a securitization will be borne first by the owner of the property (i.e., the owner will first lose the equity invested in the property) and, thereafter, by mezzanine or preferred equity investors, if any, then by a cash reserve fund or letter of credit, if any, then by the first-loss CES holder, and then by holders of more senior CES. In the event the losses incurred upon default on the loan exceed any equity support, reserve fund, letter of credit, and classes of securities junior to those in which we invest (if any), we may not be able to recover all of our investment in the securities we hold. In addition, if the underlying properties have been overvalued by the originating appraiser or if the values subsequently decline and, as a result, less collateral is available to satisfy interest and principal payments due on the related ABS, then the first-loss securities may suffer a total loss of principal, followed by losses on the second-loss and then third-loss securities (or other residential and commercial CES or residential and commercial IGS) in which we invest (or have an indirect interest).

We have significant credit risk in California and may be disproportionately affected by an economic or housing downturn, natural disaster, terrorist event, or any other adverse event specific to California. We also have credit risk in other states and our business may be harmed by an economic or housing downturn, natural disaster, terrorist event, or any other adverse event in an area where we have credit risk.

We have a concentration of residential and commercial real estate loans secured by property in California. In addition, a significant number of residential and commercial real estate loans that underlie the securities we own are secured by property in California. We have residential credit risk in all states although we do not have more than 1% of our residential loans in any one zip code. We also have commercial credit risk in most states. Nonetheless, we still have a significantly higher exposure in California and any event that adversely affected the California economy or real estate market could have a disproportionately adverse effect on our business.

A decline in the economy or difficulties in the real estate markets are likely to cause a decline in the value of residential and commercial properties. This, in turn, will increase the risk of delinquency, default, and foreclosure on real estate underlying securities and loans we hold. This may then adversely affect our credit loss experience and other aspects of our business, including our ability to securitize real estate loans and securities.

The occurrence of a natural disaster (such as an earthquake, tornado, hurricane, or a flood) may cause a sudden decrease in the value of real estate and would likely reduce the value of the properties collateralizing the mortgage loans we own or those underlying the securities we own. Since certain natural disasters may not typically be covered by the standard hazard insurance policies maintained by borrowers, the borrowers may have to pay for repairs due to the disasters. Borrowers may not repair their property or may stop paying their mortgage loans under those circumstances, especially if the property is damaged. This would likely cause foreclosures to increase and lead to higher credit losses on our loans or on the pool of mortgage loans underlying the securities in which we provide credit-enhancement.

7

TABLE OF CONTENTS

We have credit risk and other risk exposure to commercial real estate.

The commercial real estate assets we own or in which we have an indirect interest through our investment in commercial mortgage backed securities and our investment in Acacia entities may be subject to significant credit and other risks, including environmental and legal risks. The net operating income and fair values of commercial real estate properties may fluctuate with economic cycles and as a result of other factors, so that debt service coverage may be unstable. The value of the property may not support the value of the loan if there is a default. Commercial real estate loans are particularly sensitive to changes in the local economy, so even minor local adverse economic events may adversely affect the performance of commercial real estate assets. Many commercial real estate loans are not fully amortizing and, therefore, the timely recovery of principal is dependent on the borrower's ability to refinance or sell the property at maturity.

The prices of commercial CES are more sensitive to adverse economic downturns or individual issuer developments than more highly rated real estate securities. A projection of an economic downturn, for example, could cause a decline in the price of commercial CES because of increasing concerns regarding the ability of obligors of loans underlying CES to continue to make principal and interest payments.

For some types of commercial loans, the commercial real estate securing the loan is in transition, such as a former office building that is in the process of being converted into condominiums. These loans entail higher risks than traditional commercial property loans made against stabilized properties. Initial debt service coverage ratios, loan-to-value ratios, and other indicators of credit quality for these loans may not meet standard market criteria for stabilized commercial real estate loans. The underlying properties may not transition or stabilize as expected. The personal guarantees and forms of cross-collateralization that are secured in connection with some of these loans may not be effective.

We have significant credit risk in California and may be disproportionately affected by an economic or housing downturn.

Our commercial loans are illiquid. If we choose to sell them, we may not be able to do so in a timely manner or for a satisfactory price. Financing these loans may be difficult, and may become more difficult if credit quality deteriorates.

Mezzanine loans, distressed assets, and loan participations have concentrated credit, servicing, and other risks. We have in the past directly originated some of our commercial loans and participated in the origination of others, and may do so again in the future. This may expose us to credit, legal, and other risks that may be greater than is usually present with acquired loans.

We may incur losses on commercial real estate loans and securities for reasons not necessarily related to an adverse change in the performance of the property. This includes bankruptcy by the owner of the property, issues regarding the form of ownership of the property, poor property management, origination errors, inaccurate appraisals, fraud, and non-timely actions by servicers. We review the underlying loan files prior to acquiring commercial loans and securities backed by commercial loans, but our review may not uncover these or other issues at that time. By the time these problems become apparent, we may have little or no recourse to the issuer of the securities or seller of the loan and we may incur losses as a result.

We assume credit risk on a variety of residential and commercial mortgage assets through our investments in Acacia entities.

The Acacia entities we sponsor own investment-grade and non-investment-grade securities issued by residential and commercial real estate loan securitization entities. Acacia also owns CDO securities created and issued by others and these securities usually have concentrated risks with respect to residential and commercial real estate. Other assets held by Acacia entities include, without limitation, loans, debt instruments, and derivatives. Assets held by Acacia entities are reported as part of our consolidated securities portfolio on our consolidated balance sheets. Generally, we do not control or influence the underwriting, servicing, management, or loss mitigation efforts with respect to the underlying assets in these securities. Some of the securities Acacia owns are backed by subprime loans and alt-a loans that have substantially higher risk characteristics than prime-quality loans and are expected to have higher rates of delinquency and loss than prime loans. Some of the assets Acacia has acquired are investment-grade and non-investment-grade residential loan securities from the Sequoia securitization entities we have sponsored. Although we may have a limited degree of control or influence over the selection and management of the loans underlying Sequoia securitizations, we believe the possibility of loss on these assets remains approximately the same as it is for

TABLE OF CONTENTS

securities issued from securitizations of equivalent-quality loans that we did not sponsor. When the pools of residential loans underlying any of these securitizations experience poor credit results, Acacia's securities could have their credit ratings down-graded, could suffer declines in fair value, or could experience principal losses. When any of these events occurs, it likely reduces our long-term returns and near-term cash flows from the Acacia CDO equity securities we have acquired. As a result of poor credit performance and outlook, a significant number of securities owned by the Acacia entities have been downgraded and cash flows to most of our Acacia CDO equity securities have been cut off. We expect the remaining Acacia CDO equity security that has not yet been cut off from cash flows to be cut off sometime in 2009 for similar reasons. We do not currently anticipate sponsoring any new Acacia transactions.

The nature of the assets underlying some of the securities we hold could increase the credit risk of those securities, which, in turn, could reduce our earnings, dividends, cash flows, and access to liquidity, and otherwise negatively affect our business.

For certain types of loans underlying our CES or IGS, the loan rate or borrower payment rate may increase over time, increasing the potential for default. For example, a portion of the securities we acquire, or have an indirect interest in through our investment in the Acacia entities we sponsor, are backed by residential real estate loans that have negative amortization features. The rate at which interest accrues on these loans may change more frequently or to a greater extent than payment adjustments on an adjustable-rate loan, and adjustments of monthly payments may be subject to limitations or may be limited by the borrower's option to pay less than the full accrual rate. As a result, the amount of interest accruing on the remaining principal balance of the loans at the applicable adjustable mortgage loan rate may exceed the amount of the monthly payment. This is particularly a risk in a rising interest rate environment. Negative amortization occurs when the resulting excess is added to the unpaid principal balance of the related adjustable mortgage loan. For certain loans that have a negative amortization feature, the required monthly payment is increased after a specified number of months or after a maximum amount of negative amortization has occurred in order to amortize fully the loan by the end of its original term. Other negative amortizing loans limit the amount by which the monthly payment can be increased, which results in a larger final payment at maturity. As a result, negatively amortizing loans have performance characteristics similar to those of balloon loans. Negative amortization may result in increases in delinquencies, loan loss severity, and loan defaults, which may, in turn, result in payment delays and credit losses on our investments. Other types of loans to which we are exposed, such as hybrid loans and teaser-rate adjustable-rate loans, may also have greater credit risk than more traditional amortizing mortgage loans.

The timing of credit losses can harm our economic returns.

The timing of credit losses can be a material factor in our economic returns from residential and commercial loans and securities. If unanticipated losses occur within the first few years after a loan is originated or a securitization is completed, those losses could have a greater negative impact on our investment returns than unanticipated losses on more mature loans or securities. In addition, higher levels of delinquencies and cumulative credit losses within a securitized loan pool can delay our receipt of the principal and interest that is due to us under the terms of the securities backed by that pool. This would also lower our economic returns. The timing of credit losses could be affected the creditworthiness of the borrower and the borrower's to continue to make payments as well as new legislation, legal actions, or programs that allow for the modification of loans or ability for borrowers to get relief through bankruptcy.

Changes in prepayment rates of residential real estate loans could reduce our earnings, dividends, cash flows, and access to liquidity.

The economic returns we expect to earn from most of the residential real estate securities and loans we own (directly or indirectly) are affected by the rate of prepayment of the underlying residential real estate loans. Prepayments are unpredictable and adverse changes in the rate of prepayment could reduce our cash flows, earnings, and dividends.

Adverse changes in cash flows would likely reduce an asset's fair value, which could reduce our ability to borrow against that asset and may cause a market valuation adjustment for GAAP purposes, which could reduce our reported earnings. While we estimate prepayment rates to determine the effective yield of our assets and valuations, these estimates are not precise, and prepayment rates do not

TABLE OF CONTENTS

necessarily change in a predictable manner as a function of interest rate changes. Prepayment rates can change rapidly. As a result, changes can cause volatility in our financial results, affect our ability to securitize assets, affect our ability to fund acquisitions, and have other negative impacts on our ability to grow and generate earnings.

We own a number of securities that are particularly sensitive to changes in prepayments rates. These securities include interest-only securities (IOs) that we acquire from third parties and from our Sequoia entities. Faster prepayments than we anticipated on the underlying loans backing these IOs will have an adverse effect on our returns on these investments.

Interest rate fluctuations can have various negative effects on us and could lead to reduced earnings and increased earnings volatility.

Changes in interest rates, the interrelationships between various interest rates, and interest rate volatility could have negative effects on our earnings, the fair value of our assets and liabilities, loan prepayment rates, and our access to liquidity. Changes in interest rates can also harm the credit performance of our assets. We generally seek to hedge some but not all interest rate risks. Our hedging may not work effectively, or we may change our hedging strategies or the degree or type of interest rate risk we assume.

A portion of our equity-funded assets have adjustable-rate coupons. The cash flows we receive from these assets may vary as a function of interest rates, as may the reported earnings generated by these assets. We may also acquire loans and securities which are generally held as inventory prior to sale to a securitization entity or as a longer term investment. We may fund assets with equity and with floating rate debt and to the extent these assets have fixed or hybrid interest rates (or are adjustable with an adjustment period longer than our short-term debt), an interest rate mismatch would exist and we would earn less (and fair values may decline) if interest rates rise. We may or may not seek to mitigate interest rate mismatches for these assets with a hedging program using interest rate agreements and, to the extent we do use hedging techniques, they may not be successful.

Interest rate changes have diverse and sometimes unpredictable effects on the prepayment rates of real estate loans. Changes in prepayment rates can lower the returns we earn from our assets, diminish or delay our cash flows, reduce the fair value of our assets, and decrease our liquidity.

Except with respect to our adjustable-rate assets, higher interest rates generally reduce the fair value of most of our assets. This may affect our earnings results, reduce our ability to re-securitize or sell our assets, or reduce our liquidity. Higher interest rates could reduce the ability of borrowers to make interest payments or to refinance their loans. Higher interest rates could reduce property values and increased credit losses could result. Higher interest rates could reduce mortgage originations, thus reducing our opportunities to acquire new assets.

When short-term interest rates are high relative to long-term interest rates, an increase in adjustable-rate residential loan prepayments may occur, which would likely reduce our returns from owning adjustable-rate residential whole loans.

When short-term interest rates fall, our premium amortization expense may increase on loans acquired by Sequoia prior to July 2004, which are reported on our consolidated balance sheet. Under the applicable GAAP accounting elections, the amortization expense for the current period is a function of actual and projected prepayments and the current LIBOR interest rate. During a period of rapidly falling rates, the effect that the interest rate has on the amortized amount may become the more significant factor and may increase the amount of premium amortized thereby decreasing our reported income for that period, all other factors being equal.

The securities and loans we own are likely to lead to variable returns.

We actively manage the risks associated with acquiring, holding, and disposing of real estate loans and securities. No amount of risk management or mitigation, however, can change the variable nature of the cash flows, fair values of, and financial results generated by these loans and securities. Changes in the credit performance or the prepayments on these real estate loans and the loans underlying these securities and changes in interest rates impact the cash flows on

Changes in prepayment rates of residential real estate loans could reduce our earnings, dividends, cash flows, and

these securities, and the impact could be significant for our

TABLE OF CONTENTS

securities with concentrated risks. Changes in cash flows lead to changes in our return and also to potential variability in reported income. The revenue recognized on most of our assets is based on an estimate of the yield over the remaining life of the asset. Thus, changes in our estimates of expected cash flow from an asset will result in changes in our reported earnings on that asset in the current reporting period. We may be forced to recognize adverse changes in expected future cash flows as a current expense, further adding to earnings volatility.

For other assets, our revenue and income are based on changes in the fair value of the asset. As market conditions, liquidity, perceptions, supply, demand, and the fundamentals of each asset change, the fair values can vary widely, causing volatility in our reported earnings. Fair values for illiquid assets can be difficult to ascertain accurately, which may also lead to volatility and uncertainty of earnings.

Changes in the fair values of our assets, liabilities, and derivatives can have various negative effects on us, reduced earnings, increased earnings volatility, and volatility in our book value.

Fair values for our assets, liabilities, and derivatives can be volatile. The fair values can change rapidly and significantly and changes can result from changes in interest rates, perceived risk, supply, demand, and actual and projected cash flows and prepayments and credit performance.

A decrease in fair value may not necessarily be the result of a deterioration in future cash flows. For GAAP purposes, we mark-to-market some, but not all, of our consolidated assets and liabilities on our consolidated balance sheet. In addition, valuation adjustments on certain consolidated assets and many of our derivatives are reflected in our consolidated statement of income. As a result, assets that are funded with certain liabilities and interest-rate matched with certain liabilities and hedges may have differing mark-to-market treatment than the liability or hedge. If we sell an asset that has not been marked to market through our consolidated statement of income at a reduced market price relative to its cost basis, our reported earnings will be reduced.

A decrease in the fair value of the securities we own may result in a reduction in our book value due to the accounting standards we are required to apply. Reporting a low book value could have adverse effects even if that book value is not indicative of the actual value of our net investments in assets and securitization entities. The adverse effects include the inability to meet or agree upon covenants with counterparties, to enter into derivative contracts, or a reduction in the market price of our common stock.

Effective January 1, 2008, we adopted a new accounting standard, Financial Accounting Standards Board Statement No. 159 *The Fair Value Option for Financial Assets and Financial Liabilities* (FAS 159), which enabled us to mark-to-market both the consolidated assets and liabilities of Acacia. Our adoption of FAS 159 resulted in a one-time cumulative-effect adjustment to retained earnings on the balance sheet on January 1, 2008, for the unrealized gains or losses on Acacia assets and liabilities at that time. We believe the adoption of FAS 159 reduced the magnitude of the disparity that existed between the value of Acacia under GAAP presentation and the economic value of Acacia at and prior to December 31, 2007. Even following the adoption of FAS 159, however, there will be differences between the value of Acacia under GAAP presentation and the economic value of our investments in Acacia, and they could be significant. Discrepancies arise as a result of market dynamics and the limitations of the measurement techniques required by FAS 159. In addition to affecting our consolidated GAAP balance sheet, the adoption of FAS 159 with respect to the Acacia assets and liabilities also affects our consolidated statements of income (loss), as we are required

to record any changes in the fair value of those assets and liabilities in any given period. Fair values for illiquid assets can be difficult to estimate, which may lead to volatility and uncertainty of earnings.

Our calculations of the fair value of the securities we own or consolidate are based upon assumptions that are inherently subjective and involve a high degree of management judgment. The use of different assumptions could materially affect our fair value calculations and our results of operations and financial condition. Recent market disruptions have generated fewer third-party data points for us to consider in connection with our estimates of the fair value of our securities than were available to us in the past.

We report our securities at fair value on our consolidated balance sheets. In computing the fair values for illiquid securities such as the securities we own or consolidate and for which there are few, if any, observable third-party trades, we make a number of market-based assumptions, including assumptions regarding future

TABLE OF CONTENTS

interest rates, prepayment rates, discount rates, credit loss rates, and the timing of credit losses. These assumptions are inherently subjective and involve a high degree of management judgment. Use of different assumptions could materially affect our fair value calculations and our results of operations and financial condition.

Although we rely on our internal calculations to compute the fair value of securities we own, we also request and consider indications of value (marks) from third-party dealers to assist us in our valuation process. Recent market disruptions have resulted in fewer third-party generated data points for us to consider in connection with our estimates of the fair value of our securities than were available to us in the past.

Credit ratings assigned to debt securities by the credit rating agencies may not accurately reflect the risks associated with those securities.

Rating agencies rate debt securities based upon their assessment of the safety of the receipt of principal and interest payments. Rating agencies do not consider the risks of fluctuations in fair value or other factors that may influence the value of debt securities and, therefore, the assigned credit rating may not fully reflect the true risks of an investment in securities. Also, rating agencies may fail to make timely adjustments to credit ratings based on available data or changes in economic outlook or may otherwise fail to make changes in credit ratings in response to subsequent events, so that our investments may be better or worse than the ratings indicate. We try to reduce the impact of the risk that a credit rating may not accurately reflect the risks associated with a particular debt security by not relying solely on credit ratings as the indicator of the quality of an investment. We make our acquisition decisions after factoring in other information. However, our assessment of the quality of an investment may also prove to be inaccurate and we may incur credit losses in excess of our initial expectations.

Credit rating agencies may change their methods of evaluating credit risk and determining ratings on securities backed by real estate loans and securities. These changes may occur quickly and often. The market's ability to understand and absorb these changes, and the impact to the securitization market in general, are difficult to predict. Such changes will have an impact on the amount of investment-grade and non-investment-grade securities that are created or placed on the market in the future.

Changes in the fair values of our assets, liabilities, and derivatives can have various negative effects on us, including reduced

The assignment of an investment grade rating to a security by a rating agency (or our reference to a security as investment grade or IGS) does not mean that there is not credit risk associated with the security or that the risk of a credit loss with respect to such security is remote. For example, a large number of RMBS that were rated triple-A by one or more rating agencies have recently been downgraded, in many cases by several rating levels at one time.

Further downgrades in the credit ratings of bond insurers or any downgrades in the credit ratings of mortgage insurers could increase our credit risk, reduce our cash flows, or otherwise adversely affect our business and operations.

Downgrades on securities could have an adverse effect on the value of some of our investments and our cash flows from those investments, particularly our equity investments in Acacia. The underlying documents of each Acacia securitization entity state that certain average rating levels must be met, and if not met on the securities held by the entity, then cash that would otherwise be distributed to the equity holders or the lower-rated debt holders, would instead be distributed to the more senior debt holders. Our investments in Acacia are primarily in the equity in the securitization entities, and the vast number of downgrades that rating agencies reported have caused most of the Acacia entities to fail this average rating test, which, in turn, has adversely affected our cash flows on our investments in these entities.

Some of the securities held by the Acacia entities as well as some of the securities held by Redwood are insured by bond insurers such as Ambac Financial Group Inc., MBIA Inc., and Financial Guaranty Insurance Co., which are commonly known as monoline insurers. These monoline insurers historically have had AAA credit ratings and this credit rating has been passed on to any bonds that they insure. The high number of recent credit downgrades and other recent market turbulence has revealed that these monoline insurers have greater credit risk exposure than previously realized and the credit ratings of a number of these insurers have been downgraded as a result. Any decline in the credit rating of a monoline insurer generally results in a corresponding decline in the credit ratings of the securities insured by that insurer.

TABLE OF CONTENTS

Some of the loans held by our Sequoia securitization entities, or in which we have an indirect interest through securities we hold through Acacia or at Redwood, are insured in part by mortgage insurers. Mortgage insurance protects the lender or other holder of a loan, up to a specified amount, in the event the borrower defaults on the loan.

Mortgage insurance generally is required only when the principal amount of the loan at the time of origination is greater than 80% of the value of the property (loan-to-value). Any inability of the mortgage insurers to pay in full the insured portion of the loans that we hold would adversely affect the value of the securities we own that are backed by these loans, which could increase our credit risk, reduce our cash flows, or otherwise adversely affect our business.

Our efforts to manage credit risk may not be successful in limiting delinquencies and defaults in underlying loans or losses on our investments.

Despite our efforts to manage credit risk, there are many aspects of credit risk that we cannot control. Our quality control and loss mitigation operations may not be successful in limiting future delinquencies, defaults, and losses, or they may not be cost effective. Our underwriting reviews may not be effective. The securitizations in which we have invested may not receive funds that we believe are due from mortgage insurance companies and other counterparties.

Loan servicing companies may not cooperate with our loss mitigation efforts or those efforts may be ineffective. Service providers to securitizations, such as trustees, bond insurance providers, and custodians, may not perform in a

manner that promotes our interests. The value of the homes collateralizing residential loans may decline. The value of the commercial properties collateralizing commercial loans may decline. The frequency of default and the loss severity on loans upon default may be greater than we anticipate. Interest-only loans, negative amortization loans, adjustable-rate loans, larger balance loans, reduced documentation loans, subprime loans, alt-a loans, second lien loans, loans in certain locations, and loans that are partially collateralized by non-real estate assets may have increased risks and severity of loss. If loans become real estate owned as a result of foreclosure, we bear the risk of not being able to sell the property and recovering our investment and of being exposed to the risks attendant to the ownership of real property. Changes in consumer behavior, bankruptcy laws, tax laws, regulation on the mortgage industry, and other laws may exacerbate loan losses. Future changes in rules that would enable loans owned by a securitization entity to be modified may not be beneficial to our interests if the modifications reduce the interest we earn and increase the eventual severity of a loss. In some states and circumstances, the securitizations in which we invest have recourse as owner of the loan against the borrower's other assets and income in the event of loan default; however, in most cases, the value of the underlying property will be the sole effective source of funds for any recoveries. Other changes or actions by judges or legislators regarding mortgage loans and contracts including the voiding of certain portions of these agreements may reduce our earnings, impair our ability to mitigate losses, or increase the probability and severity of losses. Any expansion of our loss mitigation efforts as we grow our portfolio will increase our operating costs and the expanded loss mitigation efforts may not reduce our future credit losses.

New assets we acquire may not generate yields as attractive as yields on our current assets, resulting in a decline in our earnings per share over time.

We believe the assets we acquire have the potential to generate attractive economic returns and GAAP yields, but acquiring assets in an uncertain economic environment poses risks. Potential cash flow and mark-to-market returns from new asset acquisitions could be negative, including both new assets that are backed by newly-originated loans, as well as new acquisitions that are backed by more seasoned assets that may experience higher than expected levels of delinquency and default.

In order to maintain our portfolio size and our earnings, we must reinvest in new assets a portion of the cash flows we receive from principal, interest, calls, and sales. We receive monthly payments from many of our assets, consisting of principal and interest. In addition, occasionally some of our residential securities are called (effectively sold). Principal payments and calls reduce the size of our current portfolio and generate cash for us. We may also sell assets from time to time as part of our portfolio management and capital recycling strategies.

If the assets we acquire in the future earn lower GAAP yields than the assets we currently own, our reported earnings per share will likely decline over time as the older assets pay down, are called, or are sold. Under the effective yield method of accounting that we use for GAAP accounting purposes for some of our

TABLE OF CONTENTS

assets, we recognize yields on assets based on our assumptions regarding future cash flows. A portion of the cash flows we receive may be used to reduce our basis in these assets. As a result of these various factors, our basis for GAAP amortization purposes may be lower than their current fair values. Assets with a lower GAAP basis than current fair values generate higher GAAP yields, yields that are not necessarily available on newly acquired assets. Business conditions, including credit results, prepayment patterns, and interest rate trends in the future are difficult to project with accuracy over the life of the assets we acquire, so there will be volatility in the reported returns over time.

Investments in diverse types of assets and businesses could expose us to new, different, or increased risks.

We have invested in and may in the future invest in a variety of real estate and non-real estate related assets that may not be closely related to our current core business. Additionally, we may enter various securitizations, service, and other operating businesses that may not be closely related to our current business. Any of these actions may expose us to new, different, or increased investment, operational, financial, or management risks. We have made investments in CDO debt and equity securities issued by CDO securitizations other than Acacia that own various types of assets, generally real estate related. These CDOs (as well as the Acacia entities) have invested in manufactured housing securities, subprime residential securities, synthetic securities that reference other securities, and other residential securities backed by lower-quality borrowers. They also own a variety of commercial real estate loans and securities, corporate debt issued by REITs that own commercial real estate properties, and other assets that have diverse credit risks. We may invest in equity securities issued by CDOs that own trust preferred securities issued by financial institutions or other types of non-real estate assets. We may invest directly or indirectly in real property. We may invest in non-real estate ABS or corporate debt or equity. We have invested in diverse types of IOs from residential and commercial securitizations sponsored by us or by others. The higher credit and prepayment risks associated with these types of investments may increase our exposure to losses. We may invest in non-U.S. assets that may expose us to currency risks (which we may choose not to hedge) and different types of credit, prepayment, hedging, interest rate, liquidity, legal, and other risks.

We may change our investment strategy or financing plans, which may result in riskier investments and diminished returns.

We may change our investment strategy or financing plans at any time, which could result in our making investments that are different from, and possibly riskier than, the investments we have previously made or described. A change in our investment strategy or financing plans may increase our exposure to interest rate and default risk and real estate market fluctuations. A decision to employ additional leverage could increase the risk inherent in our investment strategy. Furthermore, a change in our investment strategy could result in our making investments in new asset categories or in different proportions among asset categories than we previously have. For example, we could in the future determine to invest a greater proportion of our assets in securities backed by subprime residential mortgage loans. These changes could result in our making riskier investments, which could ultimately have an adverse effect on our financial returns. Alternatively, we could determine to change our investment strategy or financing plans to be more risk averse, resulting in potentially lower returns, which could also have an adverse effect on our financial returns.

Our growth may be limited if assets are not available or not available at attractive prices.

To reinvest proceeds from principal repayments and deploy capital we raise, we must acquire new assets. If the availability of new assets is limited, we may not be able to acquire assets that will generate attractive returns. Generally, asset supply can be reduced if originations of a particular product are reduced or if there are few sales in the secondary market of seasoned product from existing portfolios. In particular, assets we believe have a favorable risk/reward ratio may not be available for purchase.

We do not originate loans and rely on the origination market to supply the types of loans we wish to credit-enhance. At times, due to heightened credit concerns, strengthened underwriting standards, or concerns about economic growth or housing values, the volume of originations may decrease significantly. In 2008, the volume of all types of loan originations was significantly lower than in recent years, and the volume may not return to previous levels in the foreseeable future. This reduced volume may make it difficult for us to acquire loans and securities.

Investments in diverse types of assets and businesses could expose us to new, different, or increased risks.

TABLE OF CONTENTS

The supply of new securitized assets available for purchase could continue to be reduced if the economics or form of the securitization continues to be unattractive. A key factor in the economics of securitization is a highly liquid market for triple-A rated securities. The events beginning in late 2007 and continuing through 2008 revealed that the liquidity of this market may be severely disrupted at times. Fears about credit quality and the changes in credit rating agencies analyses have dampened the demand for IGS backed by real estate loans and securities, and investor demand in the foreseeable future for these securities may not reach previous levels. Without a robust market for triple-A rated securities, the supply of real estate CES could be significantly diminished. In addition, the risks associated with the acquisition of loans for the purpose of securitization may increase significantly and we may choose not to acquire any loans during these periods.

We may allocate investment opportunities between us and investment funds or accounts we manage.

One of our long-term business strategies is to build an asset management business through our wholly-owned subsidiary, Redwood Asset Management, and as part of this strategy we may sponsor additional limited partnerships that Redwood Asset Management will advise. We believe that this strategy will allow us to expand our investment platform by attracting third party limited partnership investors. It will also enable us to generate management and performance fees for managing the investments of those limited partnerships, which may make investments in the same types of assets in which we invest. In addition, Redwood Asset Management may provide investment advice with respect to separately managed accounts that also invest in the same types of assets in which we invest. We will develop methodologies for allocating investment opportunities between Redwood and these limited partnerships and separately managed accounts. As a result, we may allocate investment opportunities, in whole or in part, to limited partnerships that we sponsor or separate accounts that we manage.

Many of our investments have limited liquidity.

The residential, commercial, and CDO CES we acquire are generally less liquid than the residential, commercial, and CDO IGS we acquire. In turbulent markets, it is likely that the liquidity of the lower-rated securities, and some of the higher-rated securities that we hold, may become even less liquid. As a result, we may not be able to sell certain assets at opportune times or at attractive prices or may incur significant losses upon sale of the assets.

As a result of the limited liquidity of the types of securities we acquire and our securitization entities issue, there may be little trading information available to verify the values at which we report these assets and liabilities on our financial statements. This makes the estimates of fair value reflected in our financial statements more assumption-based, and our reported earnings and book values may not reflect the values we ultimately realize from our portfolio.

We sometimes utilize short-term financial leverage and this could expose us to increased risks.

We have invested in the past and may invest in the future in IGS and residential whole loans financed with various types of short-term debt. By incurring this leverage we can generate attractive returns on our equity invested in these assets. However, as a result of the leverage, we could also incur significant losses if our borrowing costs increase relative to the earnings on our assets and hedges. Financing facilities may also force us to sell assets under adverse market conditions to meet lenders' margin calls in the event of a decrease in the fair values of the assets pledged as

collateral. Liquidation of the collateral could create negative tax consequences and raise REIT qualification issues.

Although we typically seek a variety of financing facilities from several counterparties, there can be no assurance that we would be able to establish short-term financing facilities or renew them when they mature. The failure to renew facilities could force us to sell assets in adverse market conditions. Liquidity in debt markets, including repo and commercial paper, can be withdrawn suddenly, making it difficult or expensive to renew short-term borrowings as they mature.

15

TABLE OF CONTENTS

To the extent the use of short-term financial leverage is or were to become critical to our business, the inability to access financial leverage through warehouse and repurchase facilities, credit facilities, or commercial paper may inhibit our ability to execute our business plan, and our inability to access funding could have a material adverse effect on our results of operations, financial condition, and business.

Our ability to fund our business or our investment strategy may depend upon our securing warehouse, repurchase, credit, commercial paper, and other forms of debt financing (or leverage) on acceptable terms. For example, pending the securitization of a pool of mortgage loans we may fund the acquisition of mortgage loans through borrowings from warehouse, repurchase, credit facilities, and commercial paper. We can provide no assurance that we would be successful in establishing sufficient warehouse, repurchase, credit facilities, and issuing commercial paper. In addition, because warehouse, repurchase, credit facilities, and commercial paper are short-term in nature, the lenders may decline to renew them upon maturity or expiration, making it more difficult for us to secure continued financing. During certain periods of the credit cycle such as has been in effect recently, lenders may curtail their willingness to provide financing. To the extent our business or investment strategy calls for us to access leverage through borrowing funds and counterparties are unable or unwilling to lend to us, then our business and results of operations will be adversely affected. Furthermore, to the extent we do employ leverage, and subsequently default or are unable to renew the facilities when they mature, we may suffer adverse consequences. In addition, it is possible that lenders who provide us with committed financing could experience changes in their ability to advance funds to us, independent of our performance or the performance of our investments, in which case funds we had planned to be able to access may not be available to us.

Hedging activities may reduce long-term earnings, may fail to reduce earnings volatility, and may fail to protect our capital in difficult economic environments.

We attempt to hedge certain interest rate risks (and, to a lesser extent, prepayment risks) by balancing the characteristics of our assets and associated liabilities with respect to those risks and entering into various interest rate agreements. The number and scope of the interest rate agreements we utilize may vary significantly over time. We generally attempt to enter into interest rate agreements that provide an appropriate and efficient method for hedging the desired risk.

Hedging against interest rate risks using interest rate agreements and other instruments usually has the effect over time of lowering long-term earnings. To the extent that we hedge, it is usually to protect us from some of the effects of short-term interest rate volatility, to lower short-term earnings volatility, to stabilize liability costs or fair values, to

We sometimes utilize short-term financial leverage and this could expose us to increased risks.

21

stabilize our economic returns from or meet rating agency requirements with respect to a securitization, or to stabilize the future cost of anticipated ABS issuance by a securitization entity. Hedging may not achieve its desired goals.

Pipeline hedging for loan purchase commitments may not be effective due to loan fallout or other reasons. Using interest rate agreements as a hedge may increase short-term earnings volatility, especially if we do not elect certain accounting treatments for our hedges. Reductions in fair values of interest rate agreements may not be offset by increases in fair values of the assets or liabilities being hedged. Conversely, increases in fair values of interest rate agreements may not fully offset declines in fair values of assets or liabilities being hedged. Changes in fair values of interest rate agreements may require us to pledge significant amounts of collateral or cash.

We also may hedge by taking short, forward, or long positions in U.S. Treasuries, mortgage securities, or other cash instruments. We may take both long and short positions in credit derivative transactions linked to real estate assets.

These derivatives may have additional risks to us, such as special liquidity, basis risks, and counterparty risks.

Our quarterly earnings may be subject to fluctuations from period to period as a result of the accounting treatment for certain interest rate agreements or for assets or liabilities that do not necessarily match those used for interest rate agreements, or as a result of our failure to meet the requirements necessary to obtain specific hedge accounting treatment for certain interest rate agreements.

16

TABLE OF CONTENTS

We may enter into derivative contracts that expose us to contingent liabilities and those contingent liabilities may not appear on our balance sheet.

We may enter into derivative contracts that could require us to make cash payments in certain circumstances. Potential payment obligations would be contingent liabilities and may not appear on our balance sheet. Our ability to satisfy these contingent liabilities depends on the liquidity of our assets and our access to capital and cash. The need to fund these contingent liabilities could adversely impact our financial condition.

We may invest in synthetic securities, credit default swaps, and other credit derivatives, which expose us to additional risks.

We may invest in synthetic securities, credit default swaps, and other credit derivatives that reference other real estate securities or indices. These investments may present risks in excess of those resulting from the referenced security or index. These investments are typically a contractual relationship with a counterparty and not an acquisition of a referenced security or other asset. In these types of investments, we have no right directly to enforce compliance with the terms of the referenced security or other assets and we have no voting or other consensual rights of ownership with respect to the referenced security or other assets. In the event of insolvency of a counterparty, we will be treated as a general creditor of the counterparty and will have no claim of title with respect to the referenced security.

The markets for these types of investments have, in some cases, only existed for a few years and may not be liquid. Many of these investments incorporate pay as you go credit events which have been introduced into the market fairly recently. For example, the terms of credit default swaps are still evolving and may change significantly, which could make it more difficult to assign such an instrument or determine the loss pursuant to the underlying agreement. In a credit default swap, the party wishing to buy protection will pay a premium. When interest rates change, the spreads change, or the prevailing credit premiums on credit default swaps change, the amount of the termination payment due could change by a substantial amount. In an illiquid market, the determination of this change could be difficult to ascertain and, as a result, we may not achieve the desired benefit of entering into this contractual relationship.

Hedging activities may reduce long-term earnings, may fail to reduce earnings volatility, and may fail to protect our c

To date, we have entered into a limited number of these agreements. We may over time increase our exposure to these types of investments as the market for them grows and during times when acquiring other real estate loans and securities may be difficult. We may find credit default swaps and other forms of synthetic securities to be a more efficient method of providing credit-enhancement on specific pools of real estate loans. We will attempt to manage the risks associated with these investments including counterparty risks, but our efforts may prove to be insufficient in enabling us to generate the returns anticipated.

Our results could be adversely affected by counterparty credit risk.

We have credit risks that are generally related to the counterparties with which we do business. There is a risk that counterparties will fail to perform under their contractual arrangements with us and this risk is usually more pronounced during an economic downturn. Counterparties may seek to eliminate credit exposure by entering into offsetting, or back-to-back, hedging transactions, and the ability of a counterparty to settle a synthetic transaction may be dependent on whether the counterparties to the back-to-back transactions perform their delivery obligations. Those risks of non-performance may differ materially from the risks entailed in exchange-traded transactions, which generally are backed by clearing organization guarantees, daily mark-to-market and settlement of positions, and segregations and minimum capital requirements applicable to intermediaries. Transactions entered into directly between parties generally do not benefit from those protections, and expose the parties to the risk of counterparty default. Furthermore, there may be practical and timing problems associated with enforcing our rights to assets in the case of an insolvency of a counterparty.

In the event a counterparty to our short-term borrowings becomes insolvent, we may fail to recover the full value of our pledged collateral, thus reducing our earnings and liquidity. In the event a counterparty to our interest rate agreements, credit default swaps, or other derivatives becomes insolvent or interprets our agreements with it in a manner unfavorable to us, our ability to realize benefits from the hedge transaction may be diminished, any cash or collateral we pledged to the counterparty may be unrecoverable, and we may be forced to unwind these agreements at a loss. In the event that one of our servicers becomes insolvent or

17

TABLE OF CONTENTS

fails to perform, loan delinquencies and credit losses may increase and we may not receive the funds to which we are entitled. We attempt to diversify our counterparty exposure and (except with respect to loan representations and warranties) attempt to limit our counterparty exposure to counterparties with investment-grade credit ratings; however, we may not always be able to do so. Our counterparty risk management strategy may prove ineffective and, accordingly, our earnings could be adversely affected.

Our securitization operations expose us to liquidity, fair value, and execution risks.

Residential loan and CDO securitization operations require access to short-term debt to finance inventory accumulation prior to sale to the securitization entities. This debt may be unavailable or the terms of the available debt may be unfavorable to us. We expect to pledge the inventory assets we acquire to secure the short-term debt we incur. This type of debt is recourse to us and if the fair value of the collateral declines, we would be required to increase the amount of collateral pledged to secure the debt or to reduce the debt amount. Our goal is to sell the assets acquired with the proceeds from the debt to a securitization entity; however, if our ability to complete the securitization is disrupted and we are unable to extend the term of the debt incurred to finance the inventory of assets, we would need to sell the assets instead of completing the planned securitization, which typically would result in a loss.

We may invest in synthetic securities, credit default swaps, and other credit derivatives, which expose us to additional

When we acquire assets for a securitization, we make assumptions about the cash flows that will be generated from the securitization of these assets. Widening ABS spreads, rising ABS yields, incorrect estimation of rating agency securitization requirements, poor hedging results, and other factors could result in a securitization execution that provides lower cash flows than initially assumed. This could result in significant losses to us for tax purposes and reduced earnings for GAAP purposes.

Short-term borrowing arrangements used to support securitization operations include debt covenants. While these covenants have not meaningfully restricted our operations in the past, they could be restrictive to us in the future. In the event we violate debt covenants, we may incur expenses or losses, or our ability to incur additional debt may be restricted.

Our payment of commitment fees and other expenses to secure borrowing lines may not protect us from liquidity issues or losses. Variations in lenders' abilities to access funds, lender confidence in us, lender collateral requirements, available borrowing rates, the acceptability and fair values of our collateral, and other factors could force us to utilize our liquidity reserves or to sell assets, thus affecting our liquidity, financial soundness, and earnings.

Our securitization activities could expose us to litigation which may adversely affect our business.

We sponsor securitization entities which issue asset-backed securities. Through our Sequoia securitization entities, we issue ABS that are backed by mortgage loans held by the Sequoia entities. Through our Acacia securitization entities, we issue ABS that are backed by securities held by the Acacia entities. As a result of declining property values, increasing defaults, and other factors, the cash flows from the loans held by the Sequoia entities and the securities held by the Acacia entities may be insufficient to repay in full the ABS issued. We are not directly liable for any of the ABS issued by these entities. Nonetheless, third parties who hold the ABS issued by these entities may try to hold us liable for any losses they experience, including through claims under the securities laws. Defending a lawsuit can consume significant resources and may divert management's attention from our operations. To the extent we are unsuccessful in our defense of any lawsuit, we could suffer losses, which could be material.

Our due diligence of potential investments may not reveal all of the liabilities associated with such investments and may not reveal aspects of such investments which could lead to investment losses, and our ability to manage exposures to assets in which we have an indirect interest is limited.

Before making certain investments we may undertake due diligence efforts with respect to various aspects of the investment, including investigating the strengths and weaknesses of the originator or issuer of the asset and, in the case of investments in ABS, verifying certain aspects of the underlying assets themselves as well as other factors and characteristics that may be material to the performance of the investment. In making the assessment and otherwise conducting due diligence, we rely on resources available to us and, in some cases, an investigation by third parties. There can be no assurance that any due diligence process that we conduct will uncover relevant facts that could be determinative of whether or not an investment will be successful.

TABLE OF CONTENTS

Moreover, our ability to manage our exposures on residential mortgage assets and other assets held indirectly by us through securitization programs (such as Sequoia and Acacia) is significantly limited by contractual and other constraints of the securitization vehicle structures in which such assets are held.

We have exposure under representations and warranties we make in the loan sale contracts with securitization entities.

In connection with our securitization activities, we sell the loans to the securitization entities we sponsor pursuant to agreements in which we make representations and warranties to those securitization entities with respect to the assets we transfer to them. If our representations and warranties are inaccurate, for example, because of irregularities in the underlying loans, we may be obligated to repurchase the loans from the securitization entities at principal value, which may exceed fair value. We generally obtain representations and warranties that parallel those we provide to the securitization entities from the parties from whom we acquired the loans. As a result, we believe that we should, in most circumstances, be able to compel the original sellers of the loans to repurchase from us the loans we are obligated to repurchase from the securitization entities. However, if the representations and warranties are not parallel, or if the original seller is not in a financial position to be able to repurchase the loans or disputes its obligation to repurchase the loans, we may incur a loss upon repurchase of the loans from the securitization entity. Furthermore, if we were to establish a reserve to cover this contingency for GAAP purposes, the amount we reserve could turn out to be inadequate to cover losses incurred.

We may be subject to the risks associated with inadequate or untimely services from third-party service providers, which may harm our results of operations. We also rely on corporate trustees to act on behalf of us and other holders of securities in enforcing our rights.

Our loans and loans underlying securities we own are serviced by third-party service providers. In the case of our securitization entities, these arrangements allow us to increase the volume of the loans we purchase and securitize without incurring the expenses associated with servicing operations. Should a servicer experience financial difficulties, it may not be able to perform these obligations. Servicers who have sought bankruptcy protection may, due to application of provisions of bankruptcy law, not be required to make advance payments to us of amounts due from loan obligors. Even if a servicer were able to advance amounts in respect of delinquent loans, its obligation to make the advances may be limited to the extent that it does not expect to recover the advances due to the deteriorating credit of the delinquent loans. In addition, as with any external service provider, we are subject to the risks associated with inadequate or untimely services for other reasons. Servicers may not advance funds to us that would ordinarily be due because of errors, miscalculations, or other reasons. Many borrowers require notices and reminders to keep their loans current and to prevent delinquencies and foreclosures, which our servicers may fail to provide. In the current economic environment, many servicers are experiencing higher volumes of delinquent loans than they have in the past and, as a result, there is a risk that their operational infrastructures cannot properly process this increased volume. A substantial increase in our delinquency rate that results from improper servicing or loan performance in general may result in credit losses, may increase our cost of doing business, and could harm our ability to securitize our real estate loans in the future.

We also rely on corporate trustees to act on behalf of us and other holders of securities in enforcing our rights. Under the terms of most securities we hold we do not have the right to directly enforce remedies against the issuer of the security, but instead must rely on a trustee to act on behalf of us and other security holders. Should a trustee not be required to take action under the terms of the securities, or fail to take action, we could experience losses.

Our cash balances and cash flows may be insufficient relative to our cash needs.

We need cash to meet our interest expense payments, working capital, minimum REIT dividend distribution requirements, and other needs. We may also need cash to repay any recourse short-term borrowings in the event the fair values of our assets that serve as collateral for that debt decline, the terms of short-term debt become less

We have exposure under representations and warranties we make in the loan sale contracts with securitization entities

attractive, or for other reasons.

Our sources of cash flow may not be sufficient to satisfy these needs. Cash flows from principal repayments could be reduced if prepayments slow or if credit quality deteriorates. Cash flows from most of

19

TABLE OF CONTENTS

our investments in CDOs (including investments in Acacia) have been disrupted due to credit rating agencies downgrading securities owned by the securitization entity below certain average rating tests. For some of our assets, cash flows are locked-out and we receive less than our pro-rata share of principal payment cash flows in the early years of the investment. For some loans, borrowers have the option to make payments that are less than the fully amortized amount. Operating cash flows could be reduced if earnings are reduced, if discount amortization income significantly exceeds premium amortization expense, or for other reasons. Our minimum dividend distribution requirements could exceed our cash flows if our income as calculated for tax purposes significantly exceeds our net cash flows. This could occur when taxable income (including non-cash income such as discount amortization and interest accrued on negative amortizing loans) exceeds cash flows received. In the event that our liquidity needs exceed our access to liquidity, we may need to sell assets at an inopportune time, thus reducing our earnings. In an adverse cash flow situation, we may not be able to sell assets effectively, and our REIT status or our solvency could be threatened.

We are subject to competition and we may not compete successfully.

We are subject to competition in seeking investments. Our competitors include other mortgage REITS, Fannie Mae, Freddie Mac, financial institutions, securities dealers, insurance companies, investment funds, and other investors in real estate securities. In addition, other companies may be formed that will compete with us for investments or otherwise pursue investment strategies similar to ours. Some of our competitors have greater resources than us and we may not be able to compete successfully for investments. Furthermore, competition for investments may lead to a decrease in the returns available from the investments which may further limit our ability to generate desired returns.

Recent legislation may lead to increased competition. Until recently, Fannie Mae and Freddie Mac have been statutorily prohibited from purchasing loans for single unit residences in the continental United States with a principal amount in excess of \$417,000. On February 7, 2008, Congress passed an economic stimulus package that includes provisions that increase the size of the loans these entities may purchase to up to \$729,750 for loans originated between July 31, 2007, and December 31, 2008. Beginning on January 1, 2009, the maximum size of the loans these entities may purchase reverted back to \$417,000, with the exception that certain high-cost areas are subject to a higher cap based on median home prices in those areas (which higher cap cannot be higher than \$625,500). In the future these loan size limits could be increased, including by an act of Congress. In addition, to the extent that property values decline while these limits remain the same, it may have the same effect as an increase in this limit, as a greater percentage of loans would likely be within the size limit. Any increase in the loan size limit, or in the overall percentage of loans that are within the limit, allows Fannie Mae and Freddie Mac to compete against us to a greater extent than they had been able to compete previously and our business could be adversely affected. The status of Fannie Mae and Freddie Mac as government-sponsored enterprises, combined with their size and other factors, make them significant competitors.

Our future success depends on our ability to attract and retain key personnel.

Our future success depends on the continued service and availability of skilled personnel, including members of our executive management team. There can be no assurance that we will be able to attract and retain key personnel.

Our cash balances and cash flows may be insufficient relative to our cash needs.

The expansion of our asset management business may expose us to new risks and will increase our cost of doing business.

We currently manage and receive a fee for managing the assets in our Acacia entities. We expanded our asset management business in 2008 by forming the Redwood Opportunity Fund, LP, and we may form additional limited partnerships and expand further into the asset management business in the future. New asset management activities may increase our exposure to litigation, fiduciary responsibilities, conflicts of interest arising from Redwood's investment activities and the activities of the entities we manage, and other risks. We cannot be certain that we will be able to manage these risks effectively. In addition, as we expand our asset management business, our asset management subsidiary may register with the SEC as an investment advisor and, as a result, become subject to additional regulation and associated additional costs of compliance.

20

TABLE OF CONTENTS

If we expand our asset management business, we will incur additional costs to establish new funds, limited partnerships, and other investment vehicles and to maintain appropriate controls and procedures and comply with applicable law and regulations. Our efforts to raise capital for these ventures may not succeed, or the capital we raise may not be sufficient to offset the initial and ongoing costs of these ventures.

If we purchase mortgage loans in the secondary market in the future, we may be required to obtain various state licenses and there is no assurance we would be able to obtain or maintain those licenses.

While we are not required to obtain licenses to purchase mortgage-backed securities, we may be required to obtain various state licenses to purchase mortgage loans in the secondary market. If we were to purchase mortgage loans in the secondary market, we may have to apply for and obtain these licenses before we could commence purchasing loans. We expect the licensing process would take several months. There is no assurance that we will be able to obtain all of the licenses we need or that we would not experience significant delays in obtaining these licenses. Furthermore, once any licenses were issued we would be required to comply with various informational and other requirements to maintain those licenses, and there is no assurance that we would be able to satisfy those requirements on an ongoing basis. If we purchase mortgage loans in the secondary market in the future, our failure to obtain or maintain the required licenses may restrict our investment options and could harm our business.

To the extent we own mortgage loans, we may be subject to liability for potential violations of predatory lending laws or similar laws, which could adversely impact our results of operations, financial condition, and business.

Various federal, state and local laws have been enacted that are designed to discourage predatory lending practices. For example, the federal Home Ownership and Equity Protection Act of 1994 (HOEPA) prohibits inclusion of certain provisions in residential mortgage loans that have mortgage rates or origination costs in excess of prescribed levels and requires that borrowers be given certain disclosures prior to origination. Some states have enacted, or may enact, similar laws or regulations, which in some cases impose restrictions and requirements greater than those in HOEPA. In addition, under the anti-predatory lending laws of some states, the origination of certain residential mortgage loans, including loans that are not classified as high cost loans under applicable law, must satisfy a net tangible benefits test with respect to the borrower. This test may be highly subjective and open to interpretation. As a result, a court may determine that a residential mortgage loan did not meet the test even if the originator reasonably believed that the test

had been satisfied. Failure of residential mortgage loan originators or servicers to comply with these laws, could subject us, as an assignee or purchaser of these loans, to monetary penalties and could result in rescission of the affected residential mortgage loans, which could adversely impact our results of operations, financial condition, and business.

We may be exposed to environmental liabilities with respect to properties to which we take title which could adversely affect our results of operations, financial condition, and business.

In the course of our business, we may take title to real estate. If we do take title, we could be subject to environmental liabilities with respect to the property, including liability to a governmental entity or third parties for property damage, personal injury, investigation, and clean-up costs. In addition, we may be required to investigate or clean up hazardous or toxic substances, or chemical releases, at a property. The costs associated with investigation or remediation activities could be substantial. If we ever become subject to significant environmental liabilities, our results of operations, financial condition, and business could be materially and adversely affected.

We may change our policies, procedures, practices, product lines, leverage, hedging strategies, or internal risk-adjusted capital guidelines in ways that may increase our risk exposure.

We may alter our policies, procedures, practices, product lines, leverage, internal risk-adjusted capital guidelines, and other aspects of our business. We may enter into new businesses, relationships, or partnerships or pursue acquisitions of other companies or a variety of different types of assets. These changes may increase the nature or magnitude of the risks to which we are exposed.

Our risk management efforts may not effectively mitigate the risks we seek to manage.

We could incur substantial losses and our business operations could be disrupted if we are unable to effectively identify, manage, monitor, and mitigate operations risks, credit risks, interest rate risks, prepayment

21

TABLE OF CONTENTS

risks, liquidity risks, and other market risks related to our business, assets, and liabilities. We actively manage our risks but our risk management policies, procedures, and techniques may not be sufficient to mitigate the risks we have identified or to identify additional risks to which we are subject or may be subject in the future.

Our technology infrastructure and systems are important and any significant disruption could have an adverse effect on our business.

In order to analyze, acquire, and manage our investments and manage the operations and risks associated with our business, assets, and liabilities, we rely upon computer hardware and software systems. Some of these systems are located at our office and some are maintained by third party vendors. Any significant interruption in the availability or functionality of these systems could have an adverse effect on our operations.

To the extent we own mortgage loans, we may be subject to liability for potential violations of predatory lending laws

We have taken steps to provide for the security of our systems and data. However, these security measures may not effectively prevent others from obtaining improper access to our systems data. Improper access could expose us to risks of data loss, litigation, and liabilities to third parties, and otherwise disrupt our operations.

Our business could be adversely affected if we have deficiencies in our disclosure controls and procedures or internal controls over financial reporting.

The design and effectiveness of our disclosure controls and procedures and internal controls over financial reporting may not prevent all errors, misstatements, or misrepresentations. While management continues to review the effectiveness of our disclosure controls and procedures and internal controls over financial reporting, there can be no assurance that our disclosure controls and procedures or internal controls over financial reporting will be effective in accomplishing all control objectives all of the time. Deficiencies, particularly material weaknesses, in internal controls over financial reporting which may occur in the future could result in misstatements of our results of operations, restatements of our financial statements, a decline in our stock price, or otherwise materially and adversely affect our business, reputation, results of operation, financial condition, or liquidity.

Our reported GAAP financial results differ from the taxable income results that drive our dividend distributions and reliance on GAAP results may not accurately reflect future taxable income and dividend distributions.

We manage our business based on long-term opportunities to generate cash flows. Our dividend distributions are generally driven by our minimum dividend distribution requirements under the REIT tax laws and our taxable income as calculated for tax purposes pursuant to the Internal Revenue Code. Our reported results for GAAP purposes may differ materially, however, from both our cash flows and our taxable income.

In determining our REIT taxable income (which drives our minimum dividend distribution requirements as a REIT), no current tax deduction is available for future credit losses that are anticipated to occur. Credit losses can only be deducted for tax purposes when they are actually realized. As a result, for tax purposes, there is no credit reserve or reduction of yield accruals based on anticipated losses, and an increase in our credit losses in the future will reduce our taxable income (and dividend distribution requirements). By contrast, for GAAP purposes, we are required to reflect in our results of operations assumptions about the amount and timing of credit losses in advance of when the losses are actually realized. As a result, the occurrence of these assumed losses will not directly impact our future GAAP income (although they could lead to additional provisions or credit reserve designations to provide for potential additional losses in the event we revise our assumptions).

For tax purposes, we generally do not mark-to-market any asset or liability. Any potential gain, loss, or impairment on an asset or liability is generally recognized for taxable income purposes only at the time of sale, call, or maturity of the asset or liability. For GAAP accounting purposes, certain assets and liabilities are marked-to-market with the changes in the fair values being reflected in the income statement in some cases. Thus, the amount and timing of any changes in the fair value of an asset or liability will likely be reported at substantially different periods when calculating GAAP and taxable income.

TABLE OF CONTENTS

Accounting for compensation expense also varies for GAAP and tax calculations, especially in how costs relating to equity awards (such as options and deferred stock units) are determined. For the most part, under GAAP, the total

Our technology infrastructure and systems are important and any significant disruption could have an adverse effect on our operations.

expense associated with an award is determined at the award date and is recognized over the vesting period. For tax purposes, the expense is recognized at the date of distribution or exercise. This leads to the potential that the total expense related to equity awards, as well as the timing for the recognition of the expense, could be significantly different for GAAP and tax purposes.

There are other differences in calculating taxable and GAAP income and there could be further differences as accounting principles and tax regulations change.

As a result of these differences in GAAP and tax accounting, our cumulative taxable income and our cumulative dividend distributions have been far greater than our cumulative earnings reported under GAAP. To the extent that the credit loss assumptions we use for GAAP purposes on our existing portfolio do occur, then we would expect our future taxable income to decrease as the credit losses occur. To the extent the other-than-temporary impairments we have recognized for GAAP income purposes reflect a decrease in future cash flows, then our taxable income will decrease in future periods.

Our GAAP income to date also includes the expense of vested equity awards that have not yet been distributed or exercised. The taxable expense we will incur on these equity awards will be dependent on the value of our common stock at future dates and this amount could be significant in any one period depending on the timing of distributions and exercises.

Taxable income consists of ordinary income and capital gains and losses. In order to recognize capital losses, we can only offset them against capital gains. There can be no assurance that we could generate capital gains to offset any capital losses we incur. Thus, in such instances, our dividend distributions would not be reduced by the amounts of any unused capital losses.

Furthermore, we establish the amount of our dividend distributions during each year based in part on our estimate of taxable income for that year. Our estimates may not be accurate and this could affect our ability to make the dividend distributions we planned and could affect the character of dividend distributions as return or capital, ordinary income, or capital gains. As a result, our dividend distributions may not end up being made in the most economic or tax-advantaged manner.

Our reported income depends on estimates and assumptions about the future and actual results may vary from our estimates, resulting in fluctuations in our balance sheet and earnings.

The preparation of financial statements in conformity with GAAP requires us to make a significant number of estimates. These estimates include the fair value of certain assets and liabilities, the amount and timing of credit losses, prepayment rates, and other items that affect the reported amounts of certain assets and liabilities as of the date of the consolidated financial statements and the reported amounts of certain revenues and expenses recognized during the reported period. Our estimates are inherently subjective in nature and fluctuations in our reported earnings will result when actual results differ from our estimates.

To prepare our financial statements we depend on accounting principles, conventions, and interpretations. Over time, accounting principles, conventions, and interpretations may change, which could affect our reported income, earnings, and stockholders equity.

Accounting rules for the various aspects of our business change from time to time. Changes in GAAP, or the accepted interpretation of these accounting principles, can affect our reported income, earnings, and stockholders equity.

Our reported GAAP financial results differ from the taxable income results that drive our dividend distributions and re

Failure to qualify as a REIT would adversely affect our dividend distributions and could adversely affect the value of our securities, including our common stock.

We believe that we have met all requirements for qualification as a REIT for federal income tax purposes for all tax years since 1994 and we intend to continue to operate so as to qualify as a REIT in the future. However, many of the requirements for qualification as a REIT are highly technical and complex and require an analysis of particular facts and an application of the legal requirements to those facts in situations where there is only limited judicial and administrative guidance. Thus, no assurance can be given that the Internal

23

TABLE OF CONTENTS

Revenue Service or a court would agree with our conclusion that we have qualified as a REIT or that future changes in our factual situation or the law will allow us to remain qualified as a REIT. Furthermore, in an environment where assets are subject to rapid changes in value, previous planning for compliance with REIT qualification rules may be disrupted. If we failed to qualify as a REIT for federal income tax purposes and did not meet the requirements for statutory relief, we would be subject to federal income tax at regular corporate rates on all of our income and we could possibly be disqualified as a REIT for four years thereafter. If we were to become subject to federal income tax, we might not have at that time the liquid assets to pay the taxes due, which could result in our needing to liquidate assets at unattractive prices. Failure to qualify as a REIT would adversely affect our dividend distributions and could adversely affect the value of our common stock.

Maintaining REIT status and avoiding the generation of excess exclusion income may reduce our flexibility and could limit our ability to pursue certain opportunities. Failure to appropriately structure our business and the transactions we enter into to comply with laws and regulations applicable to REITs could have adverse consequences.

To maintain REIT status, we must follow certain rules and meet certain tests. In doing so, our flexibility to manage our operations may be reduced. For instance:

If we make frequent asset sales from our REIT entities to persons deemed customers, we could be viewed as a dealer, and thus subject to 100% prohibited transaction taxes or other entity-level taxes on income from such transactions. Compliance with the REIT income and asset rules may limit the type or extent of financing or hedging that we can undertake.

Our ability to own non-real estate related assets and earn non-real estate related income is limited. Our ability to own equity interests in other entities is limited. If we fail to comply with these limits, we may be forced to liquidate attractive assets on short notice on unfavorable terms in order to maintain our REIT status.

Our ability to invest in taxable subsidiaries is limited under the REIT rules. Maintaining compliance with this limit could require us to constrain the growth of our taxable REIT subsidiaries in the future.

Meeting minimum REIT dividend distribution requirements could reduce our liquidity. Earning non-cash REIT taxable income could necessitate our selling assets, incurring debt, or raising new equity in order to fund dividend distributions.

Stock ownership tests may limit our ability to raise significant amounts of equity capital from one source. A REIT is limited in its ability to earn income that is treated as compensation for services. Federal legislation has been proposed that would characterize taxable income earned in the form of a carried interest in an investment fund as

Failure to qualify as a REIT would adversely affect our dividend distributions and could adversely affect the value of

compensation for services. If this legislation is enacted and does not contain a carve out for carried interests earned by REITs, we may need to restructure the way we invest in funds that we sponsor, including by having all or a portion of any carried interests held by our taxable affiliates and subject to taxation as compensation for services.

The rules we must follow and the tests we must satisfy to maintain our REIT status may change, or the interpretation of these rules and tests by the Internal Revenue Service may change. In circumstances where the application of these rules and tests to our business is not clear, we may have to interpret them and their application to us. We seek the advice of outside tax advisors in arriving at these interpretations, but our interpretations may prove to be wrong, which could have adverse consequences.

In addition, historically, our stated goal has been to not generate excess inclusion income that would be taxable as unrelated business taxable income (UBTI) to our tax-exempt stockholders. Achieving this goal has limited, and may continue to limit, our flexibility in pursuing certain transactions or has resulted in, and may continue to result in, our having to pursue these transactions through a taxable subsidiary, which reduces the

24

TABLE OF CONTENTS

net returns on these transactions by the associated tax liabilities. Despite our efforts to do so, we may not be able to avoid creating or distributing UBTI to our stockholders.

Changes in tax rules could adversely affect REITs and could adversely affect the value of our common stock.

The requirements for maintaining REIT status or the taxation of REITs could change in a manner adverse to our operations. Rules regarding the taxation of dividends are enacted from time to time and future legislative or regulatory changes may limit the tax benefits accorded to REITs, either of which may reduce some of a REIT's competitive edge relative to non-REIT corporations. For example, federal legislation enacted in 2003 generally reduced the maximum federal tax rate for dividends payable to domestic stockholders that are individuals, trusts, and estates to 15% (through 2010), however, this legislation did not, as a general matter, reduce tax rates on dividends paid by REITs. Any future adverse changes could negatively affect our business and reduce the value of our common stock.

New subsidiaries that we may establish to conduct certain types of activities or for other for specific purposes may be taxable subsidiaries of a REIT and increase our costs of operations.

In order to expand our business, seek new opportunities, or for other business reasons, we may create new subsidiaries. Generally, these would be wholly-owned by Redwood. The creation of those subsidiaries may increase our administrative costs and expose us to other legal and reporting obligations. Some of these entities may be incorporated in states other than Maryland and some may be set up to expand into regulated or international businesses.

Some of these entities will be taxable subsidiaries. Taxable subsidiaries are wholly-owned subsidiaries of a REIT that pay corporate income tax on the income they generate. That is, a taxable subsidiary is not able to deduct its dividends paid to its parent in determining its taxable income, and any dividends paid to the parent are generally recognized as income at the parent level.

Maintaining REIT status and avoiding the generation of excess exclusion income may reduce our flexibility and could

Conducting our business in a manner so that we are exempt from registration under and compliance with the Investment Company Act of 1940 may reduce our flexibility and could limit our ability to pursue certain opportunities. At the same time, failure to continue to qualify for exemption from the Investment Company Act could adversely affect us.

Under the Investment Company Act of 1940, as amended, an investment company is required to register with the SEC and is subject to extensive restrictive and potentially adverse regulations relating to, among other things, operating methods, management, capital structure, dividends, and transactions with affiliates. However, companies primarily engaged in the business of acquiring mortgages and other liens on and interests in real estate are exempt from the requirements of the Investment Company Act. We believe that we have conducted our business so that we are exempt from the Investment Company Act, however, in order to continue to do so we, among other things, must maintain at least 55% of our assets in certain qualifying real estate assets (the 55% Requirement) and are also required to maintain an additional 25% of our assets in such qualifying real estate assets or certain other types of real estate-related assets (the 25% Requirement). Rapid changes in the values of assets we own, however, can disrupt prior efforts to conduct our business to meet these requirements. Our efforts to comply with the 55% Requirement and the 25% Requirement may reduce our flexibility and could limit our ability to pursue certain opportunities.

If we failed to meet the 55% Requirement and the 25% Requirement, we could, among other things, be required either (i) to change the manner in which we conduct our operations to avoid being required to register as an investment company or (ii) to register as an investment company, either of which could adversely affect us by, among other things, requiring us to dispose of certain assets or to change the structure of our business in ways that we may not believe to be in the best interests of Redwood. Further, if we were deemed an unregistered investment company, we could be subject to monetary penalties and injunctive relief and we could be unable to enforce contracts with third parties and third parties could seek to obtain rescission of transactions undertaken during the period we were deemed an unregistered investment company, unless the court found that under the circumstances, enforcement (or denial of rescission) would produce a more equitable result than no enforcement (or grant of rescission) and would not be inconsistent with the Investment Company Act.

25

TABLE OF CONTENTS

Recently proposed legislation which could affect our ability to continue to qualify for an exemption from the Investment Company Act is described above under the risk factor entitled Recently proposed legislation could alter the rights we have with respect to our Sequoia securitization entities, which could have business, operational and legal compliance effects on us. This and other recently proposed legislation could also affect the exemptions from the Investment Company Act that we have historically relied on in structuring our business.

Our growth may be limited if we are not able to raise additional capital.

As a REIT we are required to distribute at least 90% of our REIT taxable income. Thus, we do not generally have the ability to retain earnings and we rely on our ability to raise capital to grow. We may raise capital through the issuance of new shares of our common stock, either through our direct stock purchase and dividend reinvestment plan or through secondary offerings. We may also raise capital by issuing other types of securities, such as preferred stock or convertible subordinated notes, or by taking on long-term debt. Following the completion of our recent public offering of common stock in January 2009, we have less than 15 million additional shares authorized for issuance under our charter, which will limit the amount of capital we can raise through share issuances unless our stockholders approve an increase in the authorized number of our shares in our charter.

Conducting our business in a manner so that we are exempt from registration under and compliance with the Investment

In addition, we may not be able to raise capital at times when we see opportunities to employ capital. Many of the same factors that would make investments in real estate loans and securities attractive, such as the availability of assets from distressed owners who need to liquidate and thus may accept reduced prices, and uncertainty about credit risk, housing, and the economy, may make it difficult for us to convince investors to provide us with additional capital. There may be other reasons we are not able to raise capital and, as a result, may not be able to finance growth in our portfolios. Our plan is to grow and we build our infrastructure accordingly. If we are unable to raise capital and expand our portfolios, our operating expenses may increase significantly relative to our capital base.

Provisions in our charter and bylaws and provisions of Maryland law may limit a change in control or deter a takeover that might otherwise result in a premium price being paid to our stockholders for their shares in Redwood.

In order to maintain our qualifications as a REIT, not more than 50% in value of our outstanding capital stock may be owned, actually or constructively, by five or fewer individuals (defined in the Internal Revenue Code to include certain entities). In order to protect us against risk of losing our status as a REIT due to concentration of ownership among our stockholders, our charter generally prohibits any single stockholder, or any group of affiliated stockholders, from beneficially owning more than 9.8% of the outstanding shares of any class of our stock, unless our board of directors waives or modifies this ownership limit. This limitation may have the effect of precluding an acquisition of control of us by a third party without the consent of our board of directors. As of January 31, 2009, one institutional shareholder owned in excess of 9.8% of our outstanding common stock and our board of directors has granted a waiver to that shareholder to own shares in excess of 9.8%, subject to certain terms and conditions including the execution of a voting agreement. This voting agreement applies to the shares owned in excess of 9.8% by and states that the excess shares shall be voted on matters in the same proportion as all other shares are voted (exclusive of the 9.8% block voted by the party to the voting agreement.) Our board of directors may amend this existing waiver to permit additional share ownership or may grant waivers to additional stockholders at any time.

Certain other provisions contained in our charter and bylaws and in the Maryland General Corporation Law (MCGL) may have the effect of discouraging a third-party from making an acquisition proposal for us and may therefore inhibit a change in control. For example, our charter includes provisions granting our board of directors the authority to issue preferred stock from time to time and to establish the terms, preferences and rights of the preferred stock without the approval of our stockholders. In addition, provisions in our charter and the MCGL restrict our stockholders' ability to remove directors and fill vacancies on our board of directors and restrict unsolicited share acquisitions. Our charter provides that our board of directors is divided into three classes serving staggered terms of office of three years each, and thus at least two annual meetings of stockholders, instead of one, generally would be required to effect a change in a majority of our directors. These provisions and others may deter offers to acquire our stock or large blocks of our stock upon terms

TABLE OF CONTENTS

attractive to our stockholders, thereby limiting the opportunity for stockholders to receive a premium for their shares over then-prevailing market prices.

The ability to take action against our directors and officers is limited by our charter and bylaws and provisions of Maryland law and we may (or, in some cases, are obligated to) indemnify our current and former directors and officers against certain losses relating to their service to us.

Our charter limits the liability of our directors and officers to us and you as a shareholder for money damages to the fullest extent permitted by Maryland law. In addition, our charter authorizes our board of directors to indemnify our officers and directors (and those of our subsidiaries or affiliates) for losses relating to their service to us to the full extent required or permitted by Maryland law. Our bylaws require us to indemnify our officers and directors (and those of our subsidiaries and affiliates) to the maximum extent permitted by Maryland law, in the defense of any proceeding to which he or she is made, or threatened to be made, a party because of his or her service to us. In addition, we have entered into indemnification agreements with our directors and certain of our officers and the directors of certain of our subsidiaries and affiliates which obligate us to indemnify them against certain losses relating to their service to us and the related costs of defense.

Other Risks Related to Ownership of Our Common Stock

Investing in our common stock may involve a high degree of risk.

An investment in our common stock may involve a high degree of risk, particularly when compared to other types of investments. Risks related to our industry, our investing activity, our other business activities, and the manner in which we conduct our business, and the way we have structured our operations, including to comply with various laws and regulations, could result in the reduction or elimination of the value of our common stock. The level of risk associated with an investment in our common stock may not be suitable for the risk tolerance of many investors.

Investors in our common stock may experience losses, volatility, and poor liquidity, and we may reduce our dividends in a variety of circumstances.

Our earnings, cash flows, book value, and dividends can be volatile and difficult to predict. Investors should not rely on estimates, predictions, or management beliefs. The sustainability of our cash from operations will depend on a number of factors, including our level of investment activity, the amount and timing of credit losses, prepayments, and other factors. As a consequence, there can be no assurance about the sustainability of our cash flows. Although we seek to pay a regular common stock dividend rate that is sustainable, we may reduce our regular dividend rate in the future for a variety of reasons. We have paid special dividends in the past, but we did not pay a special dividend in 2008 and may not do so in the future. We may not provide public warnings of dividend reductions prior to their occurrence. Fluctuations in our current and prospective earnings, cash flows, and dividends, as well as many other factors such as perceptions, economic conditions, stock market conditions, and the like, can affect our stock price. Investors may experience volatile returns and material losses. In addition, liquidity in the trading of our stock may be insufficient to allow investors to sell their stock in a timely manner or at a reasonable price.

The market price of our common stock could be negatively affected by various factors, including broad market fluctuations.

The market price of our common stock may be negatively affected by various factors, which change from time to time. Some of these factors are:

Our actual or anticipated financial condition, performance, and prospects and those of our competitors.

The market for similar securities issued by other REITs and other competitors of ours.

Changes in recommendations or in estimated financial results published by securities analysts who provide research to the marketplace on us, our competitors, or our industry.

General economic and financial market conditions, including, among other things, actual and projected interest rates, prepayments, and credit performance and the markets for the types of assets we hold.

Other events or circumstances which undermine confidence in the financial markets or otherwise have a broad impact on financial markets, such as the sudden instability or collapse of large financial institutions or other significant corporations, terrorist attacks, natural or man-made disasters, or threatened or actual armed conflicts.

In addition, prices of stocks on U.S. and international stock markets have recently been subject to significant fluctuations, and the market price of our common stock has also fluctuated significantly during this period. Some of these fluctuations have been limited to specific industries, including ours, but some have affected markets overall. Furthermore, these fluctuations do not always relate directly to the financial performance of the companies affected. As a result of these and other factors, investors who own our common stock could experience a decrease in the value of their investment, including decreases unrelated to our financial results or prospects.

A limited number of institutional shareholders own a significant percentage of our common stock, which could have adverse consequences to other holders of our common stock.

As of January 31, 2009, we believe that several institutional shareholders each owned in excess of 5% of our outstanding common stock and on that date one institutional shareholders owned in excess of 9.8% of our outstanding common stock. Furthermore, one or more of these investors or other investors could significantly increase their ownership stake in us. These significant ownership stakes could have adverse consequences for other stockholders because each of these stockholders will have a significant influence over the outcome of matters submitted to a vote of our stockholders, including the election of our directors or transactions involving a change in control. In addition, should any of these significant shareholders determine to liquidate all or a significant portion of their holdings of Redwood common stock, it could have an adverse effect on the market price of our common stock.

Although any beneficial owner's voting rights associated with ownership levels above 9.8% are generally limited to casting 9.8% of votes eligible to be cast, the institutional stockholder that beneficially owns in excess of 9.8% of our outstanding common stock is a party to an agreement with us pursuant to which (i) we have granted a limited waiver of the restriction on beneficial ownership of in excess of 9.8% of our outstanding common stock and (ii) it has granted irrevocable proxies to members of our management with respect to the number of shares it beneficially owns in excess of 9.8% of our outstanding common stock (which we refer to as "excess shares"). The excess shares of common stock owned by this stockholder will be voted on all matters in the same proportion as the votes cast on such matters by all stockholders, excluding, in each case, votes cast by it. While this agreement is irrevocable, the agreement provides that if George E. Bull, III, chairman of the board of directors and Chief Executive Officer, ceases to be employed by us and ceases to serve on our board of directors, the transfer of voting rights and the appointment of proxies for the excess shares will terminate immediately, and the voting power with respect to those shares will revert to that stockholder. If this were to occur, that stockholder would be able to vote all shares beneficially owned, thereby potentially increasing such stockholder's ability to influence the outcome of matters submitted to a vote of our stockholders. We may amend this agreement or enter into similar agreements with other stockholders in the future, in each case in a manner which allows for increases in the concentration of the ownership of our common stock held by one or more stockholders.

Future sales of our common stock by us or by our officers and directors may have adverse consequences for investors.

We may issue additional shares of common stock in subsequent public offerings or private placements. In addition, we may issue shares to participants in our direct stock purchase and dividend reinvestment plan and to our employees under our employee stock purchase plan and our incentive plan, including upon the exercise of or in respect of distributions on equity awards previously granted thereunder. We are not required to offer any such shares to existing

The market price of our common stock could be negatively affected by various factors, including broad market fluctu

stockholders on a preemptive basis. Therefore, it may not be possible for existing stockholders to participate in such future share issues, which may dilute the existing stockholders' interests in

28

TABLE OF CONTENTS

wus. In addition, if market participants buy shares from us in any such future share issuances it may result in them buying fewer of our shares in the open market, which in turn could have the effect of reducing the volume of shares traded in the marketplace, which could have the effect of reducing the market price of our common stock.

Our current and former directors and officers collectively beneficially own in excess of 5% of our common stock. Sales of our common stock by certain of these individuals are required to be publicly reported and are tracked by many market participants as a factor in making their own investment decisions. As a result, future sales by these individuals could negatively affect the market price of our common stock.

There is a risk that you may not receive dividend distributions or that dividend distributions may decrease over time. Changes in the dividend distributions we pay may adversely affect the market price of our common stock.

Our dividend distributions are driven by a variety of factors, including our minimum dividend distribution requirements under the REIT tax laws and our taxable income as calculated for tax purposes pursuant to the Internal Revenue Code. We generally intend to distribute to our stockholders at least 90% of our REIT taxable income, although our reported financial results for GAAP purposes may differ materially from our taxable income.

In the recent past we have consistently paid dividends; however, in November 2008, we announced our intention to reduce our 2009 regular dividend to a rate of \$0.25 per share per quarter. Our ability to pay a dividend of \$0.25 per share per quarter in 2009 may be adversely affected by a number of factors, including the risk factors described herein. These same factors may affect our ability to pay other future dividends. In addition, to the extent we determine that future dividends would represent a return of capital to investors, rather than the distribution of income, we may determine to discontinue dividend payments until such time that dividends would again represent a distribution of income. Any reduction or elimination of our payment of dividend distributions would not only reduce the amount of dividends you would receive as a holder of our common stock, but could also have the effect of reducing the market price of our common stock.

We have broad discretion over the use of our cash and cash equivalents, including the net proceeds to us from our recent public offering of common stock in January 2009.

As of December 31, 2008 we had cash and cash equivalents of \$126 million and in January 2009 we completed a public offering of common stock and raised additional funds. We also generate cash from investments we make and from other sources. We have broad discretion over the use of our cash and cash equivalents and you will be relying on the judgment of our management regarding their use. For example, although we currently expect to use the net proceeds from our January 2009 offering in the manner described under "Use of Proceeds" in the prospectus supplement relating to the offering (which was filed with the SEC on January 22, 2009), we have not allocated all of the proceeds for specific purposes. In addition, we may not be successful in investing cash and cash equivalents to yield favorable returns.

Future sales of our common stock by us or by our officers and directors may have adverse consequences for investors.

ITEM 1B. UNRESOLVED STAFF COMMENTS

None.

ITEM 2. PROPERTIES

Redwood has two leases for its principal executive and administrative offices located at One Belvedere Place, Mill Valley, California 94941. One lease expires in 2013 and the second lease expires in 2018. The 2009 rent obligation for these leases is \$1.7 million. Additionally, Redwood also has one lease for administrative offices at 245 Park Ave., 39th Floor, New York, NY 10167, which expires in 2009. The 2009 rent obligation for this lease is \$0.1 million.

ITEM 3. LEGAL PROCEEDINGS

At December 31, 2008, to our knowledge there were no material pending legal proceedings to which we or any of our subsidiaries were a party or to which any of our properties, or the properties of our subsidiaries, was subject.

29

PART II

ITEM 5. MARKET FOR REGISTRANT'S COMMON EQUITY, RELATED STOCKHOLDER MATTERS, AND ISSUER PURCHASES OF EQUITY SECURITIES

Our common stock is listed and traded on the NYSE under the symbol RWT. As of February 20, 2009, our common stock was held by approximately 1,885 holders of record and the total number of beneficial stockholders holding stock through depository companies was approximately 21,850. As of February 25, 2009, there were 60,222,048 shares of common stock outstanding. This amount includes 26,450,000 shares issued upon completion of a public offering on January 27, 2009.

The closing high and low sales prices of shares of our common stock, as reported by the Bloomberg Financial Markets service, and the cash dividends declared on our common stock for each full quarterly period during 2008 and 2007 were as follows:

	Stock Prices		Common Dividends Declared			
	High	Low	Record Date	Payable Date	Per Share	Dividend Type
Year Ended December 31, 2008						
Fourth Quarter	\$ 21.52	\$ 9.78	12/31/2008	1/21/2009	\$ 0.75	Regular
Third Quarter	\$ 27.70	\$ 17.93	9/30/2008	10/21/2008	\$ 0.75	Regular
Second Quarter	\$ 41.00	\$ 22.79	6/30/2008	7/21/2008	\$ 0.75	Regular
First Quarter	\$ 45.63	\$ 28.49	3/31/2008	4/21/2008	\$ 0.75	Regular
Year Ended December 31, 2007						
Fourth Quarter	\$ 37.06	\$ 23.58	12/31/2007	1/22/2008	\$ 0.75	Regular
			11/26/2007	12/7/2007	\$ 2.00	Special
Third Quarter	\$ 46.75	\$ 27.16	9/28/2007	10/22/2007	\$ 0.75	Regular
Second Quarter	\$ 51.15	\$ 44.96	6/29/2007	7/23/2007	\$ 0.75	Regular
First Quarter	\$ 62.24	\$ 47.33	3/30/2007	4/23/2007	\$ 0.75	Regular

All dividend distributions are made with the authorization of the board of directors at its discretion and will depend on such items as our REIT taxable earnings, financial condition, maintenance of REIT status, and other factors that the board of directors may deem relevant from time to time. The holders of our common stock share proportionally on a per share basis in all declared dividends on common stock. We intend to distribute to our stockholders as dividends at least 90% of our REIT taxable income. During the third quarter of 2008, our board of directors decided to distribute 100% of our REIT taxable income generated during 2008 and 2007.

We announced a new stock repurchase plan on November 5, 2007 for the repurchase of up to a total of 5,000,000 shares. This plan replaced all previous share repurchase plans and has no expiration date. The following table contains information on the shares of our common stock that we purchased during the year ended December 31, 2008.

		Total Number of Shares Purchased	Average Price per Share Paid	Total Number of Shares Purchased as Part of Publicly Announced Plans or Programs	Maximum Number (or Approximate Dollar Value) of Shares that May Yet be Purchased Under the Plans or Programs
January 1, 2008	July 31, 2008		\$		5,000,000
August 1, 2008	August 31, 2008	341,656	18.05	341,656	4,658,344
September 1, 2008	December 31, 2008				4,658,344

TABLE OF CONTENTS

ITEM 7. MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS

Our Business

Redwood Trust, Inc., together with its subsidiaries, is a financial institution focused on investing in, financing, and managing residential and commercial real estate loans and securities. We seek to invest in assets that have the potential to provide cash flow returns over a long period of time and support our goal of distributing attractive levels of dividends to our stockholders. For tax purposes, we are structured as a real estate investment trust, or REIT. We are able to pass through substantially all of our earnings generated at our REIT to our stockholders without paying income tax at the corporate level. We pay income tax on the REIT taxable income we retain and on the income we earn at our taxable subsidiaries.

Our primary source of income is net interest income, which consists of the interest income we earn from our investments in loans and securities less the interest expenses we incur on our borrowed funds and other liabilities. We assume a range of risks in our investments and the level of risk is influenced by the manner in which we finance our

purchase and derive income from our investments. Our primary real estate investments include investments in real estate loans and securities, an investment in a private fund that we sponsor Redwood Opportunity Fund LP (the Fund) and investments in the securitization entities that we sponsor Sequoia and Acacia.

Our direct investments in residential, commercial, and collateralized debt obligations (CDO) securities are currently financed entirely with equity and long-term debt, although we may use short-term debt financing to acquire securities and loans from time to time. Until recently, our investment focus has been on credit enhancement securities (CES, or below investment-grade securities) backed by high-quality residential and commercial real estate loans. High-quality real estate loans are loans that typically have low loan-to-value ratios, borrowers with strong credit histories, and other indications of quality relative to the range of loans within U.S. real estate markets as a whole. These investments tend to have concentrated structural credit risk that is generally reflected in their credit ratings. More recently, we have been acquiring investment-grade securities (IGS) that generally have less concentrated credit risk than CES but have the potential to provide attractive rates of return.

The entities that we sponsor the Fund, Sequoia, and Acacia invest in real estate assets. Assets held at the Fund include real estate securities, primarily non-prime residential IGS and CDO IGS, which are funded through the sale of limited partnership interests to us and to third party investors. The offer and sale of these interests were privately placed and were not registered under the federal securities laws in reliance on an exemption from registration. Assets held at the Sequoia entities include residential real estate loans, which are funded through the issuance of asset-backed securities (ABS) to us and to third party investors. Assets held at the Acacia entities include real estate securities, and some loans and other mortgage related investments, which are funded through the issuance of ABS and equity to us and to third party investors.

Our investments in each of these entities are currently financed with equity and long-term debt. Our capital at risk is limited to these investments as each entity is independent of Redwood and of each other and the assets and liabilities are not owned by and are not obligations of Redwood. For financial reporting purposes, we are generally required to consolidate these entities assets, liabilities, and minority interests.

Recent Developments

We ended 2008 in the midst of a multifaceted downturn that may be the worst since the Great Depression. We were not surprised by the downturn, but we underestimated the extraordinary level and complexity of the financial risks that market participants had taken, the extreme level of leverage employed, and the degree to which the fates of most financial institutions and markets were intertwined. With the clarity of hindsight, we were too early with some of the investments we made in the first half of 2008, although we believe these investments will ultimately yield acceptable returns. On the positive side, we financed our 2008 investments with permanent capital, which allows us to hold these securities to maturity without the risk of margin calls or forced redemptions. In addition, starting in mid-June we ceased all investing activity so that we could assess the impact of the unprecedented developments occurring in the financial markets and the implications of government intervention in the mortgage market.

34

TABLE OF CONTENTS

The mortgage credit markets remained under intense pressure through the end of 2008 as housing and economic activity continued to deteriorate, available credit and liquidity continued to contract, and the rating agencies issued a barrage of downgrades. In response, prices for residential and commercial real estate loans and securities saw a steep decline during the year. So far in 2009, asset prices seem to be holding relatively steady from year-end levels. We caution that this price stability may be temporary, especially as we expect significant additional downgrades of AAA-rated residential and commercial mortgage-backed securities.

The chart below illustrates the prices that investors were paying to compensate for the perceived credit risk of various types of residential mortgage-backed securities (RMBS) and commercial mortgage-backed securities (CMBS) over the last two years. Prices for AAA RMBS and CMBS dropped dramatically in the fourth quarter of 2008 (after the Department of Treasury announced it would not use TARP funds to acquire non-agency mortgage securities). In early 2009, prices have partially recovered from their lows.

Source: Credit Suisse, JPMorgan Chase, Redwood Trust

Various arms of the federal government have announced a variety of programs and legislation, and Congress has adopted stimulus packages aimed at stemming the decline in home values, slowing the rate of foreclosures, and getting the economy and banking system back on track. Overall, these and other initiatives should be positive for Redwood. We support government policy aimed at helping homeowners. Actions that improve conditions in the housing market will directly benefit Redwood if they lead to lower losses and faster prepayments. We believe, however, that there is unlikely to be a near-term recovery in housing or the economy.

In spite of difficult times ahead, and after spending four months watching and analyzing from the sidelines, we have been active investors in residential IGS since the latter part of 2008. We believe we can now make attractive long-term residential mortgage-related investments with a comfortable margin of safety. We invested \$46 million in AAA-rated residential IGS in the fourth quarter of 2008 at a weighted average price of 64% of face value and with average credit support of 12 percentage points. In addition, we invested \$4 million in residential CES at a weighted average price of 2% of face value. We have continued to acquire assets in the first quarter of 2009 and through February 24, 2009, we invested \$98 million in residential IGS at a weighted average price of 63% of face value and with average credit support of 11 percentage points. The vast majority of these RMBS investments are in senior securities backed by prime or near-prime loans.

It had become clear from our market analysis that the size of the current investment opportunity was substantially larger than the excess capital we had on hand to invest at the end of 2008. After much research and analysis, we concluded that raising funds through the sale of common stock would be accretive to earnings after the proceeds were deployed into new investments and would, therefore, be in the best interest of Redwood and its shareholders. We commenced a common stock offering in January 2009 and were

35

TABLE OF CONTENTS

successful in raising \$283 million of new equity capital for the company. This was an offensive and discretionary capital raise, as our existing investments continue to generate more than sufficient cash flow to cover our operating costs. We expect to generate over \$100 million in positive cash flow in 2009 from our existing investments, and had \$126 million of unrestricted cash and no short-term debt at December 31, 2008. Additional investments made with the capital raised will significantly extend the duration of our investment cash flows and allow us to leverage our existing overhead without adding personnel, systems or space.

Outlook

Looking ahead to 2009 and 2010, we see no easy fixes to the many economic challenges we face. We expect governments and the private sector to continue probing for solutions that will enable homeowners and the markets to stabilize. Complicating the problem is the extreme level of anger from all quarters (in some cases, justifiably so) at banks, regulators, Wall Street and Washington, among others. We are not yet at the point at which emotions can subside and people can resume working with and trusting each other again. We believe it is simply going to take time,

and that eventually, market forces will take hold and provide the needed stability for the economy to recover.

Of course, of particular interest to Redwood, is the health of the housing sector. It is clearly in Redwood's interest for home values to stabilize as soon as possible. Unfortunately, despite all the good intentions of government programs, we believe that home values will continue to fall for some time until housing inventories decline and values come back in line with income and rental fundamentals. The rapid increase in home values between January 2000 and December 2006—a period during which home prices doubled—was driven not by fundamentals but by excessive leverage and creative affordability mortgage products that stretched the purchasing power of borrowers. Home ownership rates, which had averaged 65% in the 20 years prior to 2000, rose to 69% between 2004 and 2006. We believe we are now in the midst of a painful retrenchment period during which home values and home ownership rates will decline until they are in line with historical norms. Realistically, this is likely to take years.

As the government becomes further enmeshed in the banking system, and as support builds for a bankruptcy law cramdown amendment that will enable bankruptcy courts to modify mortgage loan terms, we believe the industry will continue to see mounting pressure to accept loan modifications (or be forced to accept them through a cramdown in bankruptcy). We believe those loan modifications will have a relatively small financial impact on our existing portfolio. We expect that the biggest impact of modifications will be on lower-rated non-prime securities. Our capital investment in these types of securities is minimal (\$0.24 per share at December 31, 2008). For new investments, our analysis takes into account the likely negative impact to investors from projected loan modifications.

Like loan modifications, we do not think that bankruptcy cramdowns will have a major impact on Redwood. We believe cramdowns will have more of an impact on non-prime securities, for which we have an increasingly smaller exposure. We note that as of December 2008, only 0.22% of prime borrowers were in bankruptcy proceedings compared to 2.65% for subprime borrowers according to data from LoanPerformance. Furthermore, the proposed cramdown amendment may result in additional downgrades of AAA securities and additional forced selling by investors whose capital allocation is ratings sensitive. This could present attractive investment opportunities for Redwood, as many current AAA investors are ratings sensitive and could be pressured to sell (i.e. they can only own securities that are rated AAA). Other investors, such as banks, would face significantly higher capital requirements to hold lower-rated securities.

We continue to offer support for government programs designed to alleviate the housing and credit crisis, but we believe that as a nation, we must determine what long-term role the government should play in the mortgage market. We are of the opinion that governmental entities can't do it all, and that private sector financing through securitization will be essential to getting the mortgage markets back on track. We will continue to support the creative exploration of securitization solutions and we look forward to resuming our role of facilitating credit risk transfers. In the meantime, we will continue to invest carefully and patiently in assets that we believe will generate attractive returns with comfortable margins of safety.

Our investment philosophy has not changed—we intend to continue acquiring assets that we believe will generate attractive long-term cash flows. Our primary focus will be on investments similar to our recent purchases—senior cash flows from prime and near-prime RMBS. To a lesser degree, we may selectively purchase credit-sensitive securities with a shorter duration, but with the expectation of high projected rates of

TABLE OF CONTENTS

return. As we intend to fund these investments with permanent capital, we can sustain a period of price volatility without the risk of margin calls or equity redemptions. If market discount rates go higher and asset prices go lower, it affects our opportunity cost, but does not change our long-term investment returns.

We have no current plans to purchase commercial mortgage-backed securities, although we constantly monitor the commercial market and the steps the government is taking in this area. We believe that difficult times lay ahead in the commercial real estate sector, as escalating economic woes continue to place downward pressure on property-level cash flows and valuations. Commercial lending activity has been dramatically curtailed, with no new securitizations issued since the first half of 2008. Rising delinquencies have recently prompted multiple ratings downgrades for some existing CMBS up to and including junior AAA securities. While the government appears committed to eventually facilitate liquidity to the commercial sector, it is our expectation that in the near-term, the government's aim will remain more consumer focused.

We expect that GAAP earnings will remain volatile in the near term due to mark-to-market (MTM) adjustments. We may recognize additional GAAP impairment losses on residential, commercial, and CDO securities held at Redwood. Negative MTM balance sheet write-downs that have not yet been realized through our income statement totaled \$48 million at December 31, 2008. Future income statement impairment charges related to these unrealized losses will not affect GAAP book value since these MTM losses were already deducted from stockholders' equity at December 31, 2008. The fair value accounting principles we follow for the assets and liabilities at Acacia may also contribute to future MTM volatility.

Actual REIT taxable income in 2009 will depend on the timing of credit losses and the level of taxable income generated by our new and existing investments. We currently expect that taxable income will continue to be pressured by the realization of credit losses in 2009 and it is highly probable that taxable income for 2009 will be negative. In November 2008, our Board of Directors announced its intention to distribute a regular dividend of \$0.25 per share per quarter during 2009.

Summary of Results of Operations and Financial Condition

Our reported GAAP net loss was \$444 million (\$13.46 per share) for 2008 as compared to a GAAP net loss of \$1.1 billion (\$39.70 per share) for 2007. Our GAAP book value per common share was \$9.02 at December 31, 2008, an increase from negative \$22.18 at December 31, 2007 and a decrease from \$23.18 at January 1, 2008 (our estimated book value after giving effect to our adoption of FAS 159). We declared regular dividends of \$3.00 per share for 2008, the same regular dividends per share declared for 2007. We did not declare a special dividend for 2008 and declared a \$2.00 per share special dividend for 2007.

The following table presents the components of our GAAP net (loss) income for 2008, 2007, and 2006.

Table 1 Net Income

(In Thousands, Except Share Data)	Years Ended December 31,		
	2008	2007	2006
Interest income	\$567,545	\$868,348	\$884,801
Management fees	5,390	6,408	3,184
Interest expense	(420,871)	(658,170)	(704,888)
Net interest income	152,064	216,586	183,097
(Provision for) reversal of loan losses	(55,111)	(12,808)	359
Market valuation adjustments, net	(492,887)	(1,261,449)	(12,586)
Net interest (loss) income after provision and market valuation adjustments	(395,934)	(1,057,671)	170,870
Operating expenses	(62,094)	(58,555)	(55,925)
Realized gains on sales and calls, net	8,496	12,781	22,557
Minority interest allocation	1,936		

Benefit from (provision for) income taxes	3,210	(5,192)	(9,970)
Net (Loss) Income	\$(444,386)	\$(1,108,637)	\$127,532
Diluted weighted average common shares outstanding	33,022,622	27,928,234	25,718,435
Net (loss) income per share	\$(13.46)	\$(39.70)	\$4.96

37

TABLE OF CONTENTS

Our results for 2008 reflect the continuing impact of an uncertain economic environment and deteriorating housing and credit markets, resulting in significant asset price declines, high levels of market volatility, and reduced levels of liquidity for mortgage-related securities. Our net loss of \$444 million for 2008 resulted from significant negative market valuation adjustments (MVA) on real estate securities and derivatives, triggered by accounting impairment charges, and declines in interest rates. Negative MVA were significantly lower in 2008 as compared to 2007 due to fewer impairment charges and our adoption of FAS 159 on January 1, 2008, which allowed us to offset asset and liability MVA at Acacia.

Our net loss for 2008 also reflects a \$42 million increase in the provision for loan losses at Sequoia as compared to 2007 due to higher expected losses on residential real estate loans. Loss allowances calculated under GAAP increased for all Sequoia pools during 2008 and in some cases exceeded our investment at risk in certain pools. During the fourth quarter of 2008, we sold our interests in three Sequoia securitizations and recorded a \$5 million net realized gain from the resulting removal of \$1.3 billion of loans and related ABS liabilities from our consolidated balance sheet.

Net interest income was \$152 million for 2008 as compared to \$217 million for 2007, a decline of \$65 million. Net interest income at Redwood declined by \$40 million due to higher credit losses, slower prepayments, and lower interest rates on securities, and due to our decision to hold larger amounts of low yielding cash balances throughout 2008. Net interest income at Sequoia declined by \$9 million due to lower interest rates on adjustable rate loans, partially offset by lower premium expenses. Net interest income at Acacia declined by \$26 million due to the absence of discount income on securities in 2008, stemming from accounting changes resulting from our adoption of FAS 159. These declines were partially offset by \$10 million of net interest income generated on securities at the Fund during 2008.

Operating expenses increased by \$3 million in 2008 as compared to 2007 primarily due to an increase in non-recurring legal and consulting expenses.

There was an \$8 million positive change in our tax provision in 2008 as compared to 2007. In August 2008, our Board of Directors decided to distribute 100% of our REIT taxable income generated in 2007 and 2008 as dividends to shareholders. Because we had previously planned to distribute 90% of REIT taxable income (the minimum REIT requirement) and retain 10%, we were able to eliminate a provision for taxes on the undistributed portion of taxable income. At December 31, 2008, there was no undistributed REIT taxable income available to our shareholders.

The Results of Operations section of this Management's Discussion and Analysis contains a detailed discussion and analysis of the components of net income for 2008, 2007, and 2006.

In 2008 and 2007, we earned an estimated \$23 million and \$161 million, of REIT taxable income, or \$0.70 per share and \$5.65 per share, respectively. Our REIT taxable income is that portion of our total taxable income that we earn at Redwood and its qualifying REIT subsidiaries and does not include taxable income earned in taxable subsidiaries. Our REIT taxable income determines the minimum amount of dividends we must distribute to shareholders in order to maintain our tax status as a REIT. Our declared regular dividends of \$3.00 per share for 2008 include \$0.70 per share of taxable income earned in 2008, \$2.05 per share of taxable income previously undistributed from prior years, and \$0.25 per share accounted for as a return of capital for tax purposes.

The decrease in REIT taxable income for 2008 as compared to 2007 was primarily due to an increase in realized credit losses. For tax purposes, we are not permitted to establish credit reserves on securities and do not record impairments or other changes in the fair value of financial assets or liabilities. Realized credit losses for tax purposes were \$116 million and \$11 million, or \$3.50 and \$0.39 per share, for 2008 and 2007, respectively.

Book Value

The Financial Condition, Liquidity, and Capital Resources section of this Management's Discussion and Analysis contains a detailed discussion and analysis of the components of GAAP book value at December 31, 2008 and 2007. The following supplemental non-GAAP components of book value addresses our assets and liabilities at December 31, 2008, as reported under GAAP and as estimated by us using fair values for our investments. We show our investments in the Fund, and the Sequoia and Acacia entities as separate line items

38

TABLE OF CONTENTS

to highlight our specific ownership interests, as the underlying assets and liabilities of these entities are legally not ours. Our estimated economic value is calculated using bid-side asset marks, as required to determine fair value under GAAP. This method of calculating economic value more closely represents liquidation value and does not represent the higher amount we would have to pay at the offered-side to replace our existing assets. For additional information to consider when reviewing the following supplemental non-GAAP components of book value, please see Factors Affecting Management's Estimate of Economic Value below.

Table 2 Book Value

(In Millions, Except Per Share Data)	December 31, 2008		Management's Estimate of Economic Value
	As Reported	Adjustments	
Cash and cash equivalents	\$ 126		\$ 126
Real estate securities (excluding Sequoia and Acacia)			
Residential	145		145
Commercial	42		42
CDO	4		4
Subtotal real estate securities	191		191
Investments in the Fund	28		28
Investments in Sequoia	97	(32) ^(a)	65
Investments in Acacia	16	(7) ^(b)	9
Total securities and investments	332		293
Long-term debt	(150)	108 ^(c)	(42)
Other assets/liabilities, net ^(d)	(6)		(6)
Stockholders' Equity	\$ 302		\$ 371
Book Value Per Share	\$ 9.02		\$ 11.10

(a) Our Sequoia investments consist of credit enhancement securities, investment grade securities, and interest-only securities. We calculated the \$65 million estimate of economic value for these securities using the same valuation process that we followed to fair value our other real estate securities. In contrast, the \$97 million of GAAP carrying

value of these investments represents the difference between residential real estate loans owned by the Sequoia entities and the asset-backed securities (ABS) issued by these entities to third-party investors. We account for these loans and ABS issued at cost, not at fair value.

(b) Our Acacia investments consist of ABS issued and equity interests; we also have management agreements with each entity. The \$9 million estimate of economic value of our investments in Acacia entities represents the value of the ABS acquired using bid-side marks from third parties plus the net present value of projected cash flows from our Acacia management fees discounted at 45%. We valued our equity interests at zero. In contrast, the \$16 million GAAP value of these investments represents the difference between securities owned by the Acacia entities and the ABS issued by these entities to third-party investors. We account for these securities and ABS issued at fair value. We issued \$150 million of 30-year long-term debt at an interest rate of LIBOR plus 225 basis points. Under GAAP, these notes are carried at cost. Economic value is difficult to estimate with precision as the market for the notes is currently inactive. We estimated the \$42 million economic value using the same valuation process used to (c) fair value our other financial assets and liabilities. Estimated economic value is \$108 million lower than our GAAP carrying value because given the significant overall contraction in credit availability and re-pricing of credit risk, if we had issued this long-term debt at December 31, 2008, investors would have required a substantially higher interest rate.

Other assets/liabilities, net are comprised of real estate loans of \$3 million, \$4 million of deferred taxes, \$6 million (d) of accrued interest receivable, and other assets of \$27 million, less dividends payable of \$25 million and accrued interest and other liabilities of \$21 million.

39

TABLE OF CONTENTS

The following table presents the carrying value of our real estate securities at Redwood by vintage at December 31, 2008.

Table 3 Securities at Redwood by Vintage, as a Percentage of Total Securities

December 31, 2008 (In Millions)	2004 & Earlier	2005	2006 - 2008	Total	% of Total Securities
Residential					
IGS					
Prime	\$ 16	\$ 41	\$ 16	\$ 73	38 %
Non-prime		25	17	42	22 %
Total IGS	16	66	33	115	60 %
CES					
Prime	18	2	2	22	12 %
Non-prime	1	1	6	8	4 %
Total CES	19	3	8	30	16 %
Total Residential	35	69	41	145	76 %
Commercial CES	10	9	23	42	22 %
CDO		4		4	2 %
Total Securities at Redwood	\$ 45	\$ 82	\$ 64	\$ 191	100 %

Our investment strategy for real estate securities has shifted over the past year to acquiring residential prime and near prime senior cash flows with a comfortable margin of safety to protect against escalating credit losses. As a result, the fair value of our residential IGS at December 31, 2008, was \$115 million, representing 60% of our total portfolio, an increase from 4% at December 31, 2007. This percentage change in the components of our total portfolio was also the result of declines in the value of our CES, as discussed below.

Our returns on these IGS investments will be based on how much principal and interest we ultimately receive and how quickly we receive it. We fully expect, and base our analysis on, more bad things happening in housing. In our base case, we expect, on average, another 18% decline in nationwide home values and as much as a 35% decline in some major markets. In this market, our target investment profile has been attractive mid- to high-teen returns in the unlevered base case, well-protected stress case returns, and exceptional upside returns if we benefit from faster prepayments or lower credit losses. We model these profiles based upon our forecasts of the underlying collateral cash flows and the level of subordination protecting against future credit losses. We do not rely on credit ratings as part of our investment decision process. We emphasize this point because in 2009 we expect significant rating agency downgrades of prime and non-prime AAA-rated residential IGS issued from 2005 through 2008. The overall credit performance of loans underlying these vintages is significantly worse than the rating agency original expectations. In many cases, we expect securities currently rated AAA to be downgraded below investment grade, and in some cases downgraded to CCC.

As our IGS investments primarily represent senior cash flows, we do not expect a high level of losses. Our IGS returns are generally more sensitive to changes in prepayment rates than they are to credit. As has been well-publicized, many borrowers are currently having difficulty refinancing due to high non-agency mortgage rates, insufficient home equity, and stringent underwriting. A pick-up in refinance activity either from lower non-agency mortgage rates or from the government's initiatives to stimulate refinancing would benefit our IGS returns.

The fair value of our residential CES portfolio was \$30 million representing 16% of our total portfolio at December 31, 2008, down from 44% a year ago. This decline resulted from a reduction in market values due to negative mark-to-market adjustments and from our decision to re-direct our investment focus to senior cash flows (or IGS). We acquire CES at a significant discount to principal value as credit losses could reduce or eliminate the principal value of these bonds. In an ideal environment, we would experience fast prepayments

40

TABLE OF CONTENTS

and low credit losses allowing us to recover a substantial part of the discount as income. Conversely, a less beneficial environment is the environment we are currently experiencing with slow prepayments and high credit losses.

Our residential CES from 2004 and prior total \$19 million and are carried on average at 9% of their face values. From a credit standpoint, those vintages are generally performing in line with or better than our initial expectations. Our CES investments from 2005 to 2008 vintages total \$11 million, representing 2% of face value. Based on the poor credit trends underlying these vintages, we expect that future credit losses will eliminate virtually all of the principal or face amount of these securities. Therefore, the value ascribed to these securities is derived from the present value of future interest we expect to collect before actual credit losses are realized.

Our commercial CES represents 22% of our securities portfolio, down from 43% a year ago. We have not purchased commercial securities since the first quarter of 2007. Due to continuing deterioration in the fundamentals (increasing vacancies, falling rents) in an increasingly weakening economy (slowdown in consumer spending, increase in layoffs and unemployment), we wrote down our commercial CES to \$42 million, or 8% of face value in the fourth quarter.

The GAAP value (which equals fair value) of our investments in the Fund was \$28 million at December 31, 2008. These investments represent a 52% interest in the Fund, which closed in March 2008 and is fully-invested. The Fund is managed by a subsidiary of Redwood. All of the Fund's cash flow (excluding expenses and management fees) is distributed to the limited partners quarterly.

The GAAP value and fair value of our investments in Sequoia was \$97 million and \$65 million, respectively, at December 31, 2008. These investments consist primarily of interest-only securities (IOs) and to a lesser extent IGS

and CES. Our returns on these investments are most sensitive to prepayments although material changes in interest rates also have a short term impact on cash flows generated.

The GAAP value and fair value of our investments in Acacia, was \$16 million and \$9 million, respectively, at December 31, 2008. These investments represent equity interests and ABS issued from our Acacia CDO securitization entities and the management fees we receive from those entities. Due to various provisions in each CDO securitization, our equity interests are generally cut off from cash flows and we only expect limited returns on the ABS issued we own. We value the management fees at \$5 million, which equals our projected fees discounted at a 45% rate.

Pro Forma Estimate of Economic Value

The following table shows the components of management's estimate of economic value on a pro forma basis after giving effect to the \$283 million common equity raised in January 2009.

Table 4 Pro Forma Estimate of Economic Value

(In Millions, Except per Share Data)	December 31, 2008		Pro Forma ^(a)	
	Management's Estimate of Economic Value	Per Share	Management's Estimate of Economic Value	Per Share
Cash and cash equivalents	\$ 126	\$ 3.76	\$ 409	\$ 6.81
Total securities and investments	293	8.77	293	4.88
Long-term debt	(42)	(1.25)	(42)	(0.70)
Other assets/liabilities, net	(6)	(0.18)	(6)	(0.10)
Stockholders' Equity	\$ 371	\$ 11.10	\$ 654	\$ 10.89

This percentage represents the mark-to-market adjustments taken as a percentage of the reported market values at (a) the beginning of the period, or the purchase price if acquired during the period. It illustrates the price declines by collateral type for 2008. These price declines may not be indicative of price declines in the market in general.

41

TABLE OF CONTENTS

The shares of common stock issued in the January 2009 public offering were priced at \$11.25 per share and, after underwriting fees and other expenses of \$0.53 per share, the net proceeds to Redwood were \$10.72 per share. This is the reason pro forma economic book value declined from \$11.10 per share pre-offering to \$10.89 per share post-offering.

Capital and Liquidity

Throughout 2008, we maintained our strong balance sheet and liquidity. At December 31, 2008, we had \$126 million in cash and cash equivalents, or \$3.76 per share. As adjusted to reflect the receipt of the \$283 million common stock offering in January 2009, we had \$409 million in cash and cash equivalents, or \$6.81 per share. All of our cash and cash equivalents are invested in U.S. Treasury Bills or FDIC-insured bank deposits. We ended 2008 with total capital of \$452 million, which consists of \$302 million of common equity and \$150 million of 30-year long-term debt due in 2037. We had no short-term debt at December 31, 2008, and do not anticipate adding any in the current environment since our anticipated acquisitions are generally illiquid and subject to volatile market value changes. We fund these

investments with permanent capital (equity and long-term debt) that will enable us to hold the securities to maturity without the risk of margin calls or forced redemptions.

Our quarterly sources and uses of our cash is one of the financial metrics on which we focus. Therefore, as a supplement to the Consolidated Statement of Cash Flows included in this Annual Report on Form 10-K, we show in the table below (i) the beginning cash balance at September 30, 2008, and the ending cash balance at December 31, 2008, which are GAAP amounts, and (ii) the components of sources and uses of cash organized in a manner consistent with the way management analyzes them. The presentation of our sources and uses of cash for the fourth quarter of 2008 is derived by aggregating and netting all items within our GAAP Consolidated Statement of Cash Flows that were attributable to the fourth quarter of 2008.

Table 5 Redwood Sources and Uses of Cash

Total Other Uses	(78)
Net Uses of Cash	(51)
Ending Cash Balance at 12/31/08	\$ 126

Our \$40 million of cash flow from investments for the fourth quarter of 2008 declined from \$60 million in the prior quarter, as shown in the table below. This decline was due to lower principal repayments on our securities, lower interest rates, and the lack of one-time events (which had increased our third quarter cash flows from our investments in the Fund and in Acacia). Cash flow from investments does not include the gross cash flows generated by the Fund and by the Sequoia and Acacia securitization entities that are not available to Redwood, but does include the cash flow generated by our investments in these entities.

TABLE OF CONTENTS

Investments in Sequoia	13	9	(4)
Investments in Acacia	5	2	(3)
Investments in the Fund	7	3	(4)
Total Cash Flow from Investments	\$ 60	\$ 40	\$ (20)

The \$40 million of cash flow from investments for the fourth quarter included \$27 million of coupon interest and \$13 million of principal payments.

The following table details the source of our cash flow from investments, by vintage, for the fourth quarter. Most of our cash flows are generated by more seasoned investments, which we believe provides a level of comfort about the ongoing generation of cash as these assets generally continue to perform within our expectations.

Table 7 Cash Flow from Investments by Vintage

3 Months Ended December 31, 2008	Vintage					
(In Millions)	2004 & Earlier	2005	2006	2007	2008	Total
Redwood	\$ 11	\$ 6	\$ 5	\$ 4	\$	\$ 26
The Fund	2	1				3
Sequoia	6			3		9
Acacia	2					2
Total Cash Flow by Vintage	\$ 21	\$ 7	\$ 5	\$ 7	\$	\$ 40

At this time, we believe our quarterly cash flows in 2009 generated from our existing investments (excluding our cash) at December 31, 2008, will be similar to the cash flows in the fourth quarter of 2008. We caution that these are projections and the actual results may vary and will depend upon the amount and timing of credit losses, the amount and timing of prepayments, and the nature and impact of legislative and regulatory actions, among other factors.

Overall, we expect cash flow from existing investments to trend lower over time.

Future increases in cash flow could be generated by successfully reinvesting the cash flow from our existing investments, successfully investing our cash of \$126 million at December 31, 2008, and successfully investing the \$283 million in proceeds from our January 2009 common stock offering. The amount of cash flow from investments could be volatile from quarter to quarter depending on prepayment patterns, changes in interest rates, and the level of credit losses.

Factors Affecting Management's Estimate of Economic Value

In reviewing the non-GAAP supplemental components of book value which are included herein, which we also refer to as management's estimate of economic value, there are a number of important factors and limitations to consider. The estimated fair value of our stockholders' equity is calculated as of a particular point in time based on our existing assets and liabilities and does not incorporate other factors that may have a significant impact on that value, most notably the impact of future business activities and cash flows to be received. As a result, the estimated economic value of our stockholders' equity does not necessarily represent an estimate of our net realizable value, liquidation

value or our market value as a whole. Amounts we ultimately realize from the disposition of assets or settlement of liabilities may vary significantly from the

43

TABLE OF CONTENTS

estimated economic values presented in our non-GAAP supplemental components of book value. Because temporary changes in market conditions can substantially affect the economic value of our stockholders' equity, we do not believe that short-term fluctuations in the economic value of our assets and liabilities are necessarily representative of the effectiveness of our investment strategy or the long-term underlying value of our business. When quoted market prices or observable market data are not available to estimate fair value, we rely on Level 3 inputs. Because assets and liabilities classified as Level 3 are generally based on unobservable inputs, the process of calculating economic value is generally more subjective and involves a high degree of management judgment and assumptions. These assumptions may have a significant effect on our estimates of economic value, and the use of different assumptions as well as changes in market conditions could have a material effect on our results of operations or financial condition.

Results of Operations 2008 vs 2007

Beginning in 2007, we began discussing our operations in a manner that more clearly illustrates how our investments in consolidated entities impact our overall financial results. The following discussion is based upon management's condensed consolidating results for Redwood, the Fund, Sequoia, and Acacia and acts as a supplement to our GAAP results for 2008 and 2007. Comparative results for 2007 and 2006 continue to be presented on a consolidated basis.

Market valuation adjustments, net	(390,007)			(173,571)		
Net Interest Loss After Provision and MVA at Redwood	\$(296,522)			\$(42,046)		

Net interest (loss) income after provision and MVA at Redwood was a loss of \$297 million in 2008 as compared to a loss of \$42 million in 2007, an increase in the loss of \$255 million. The primary reason for this increase was an increase in negative MVA of \$216 million in 2008 over 2007. We detail these adjustments in a separate Mark-to-Market Adjustments section.

Net interest income at Redwood was \$93 million in 2008 as compared to \$134 million in 2007, a decline of \$41 million. The primary reasons for this decline were reduced coupon interest income due to lower benchmark LIBOR rates on adjustable rate securities, slower prepayment rates, and reduced discount amortization income due to lower projected cash flows on many CES and some IGS.

Interest income at Redwood was \$98 million at December 31, 2008, as compared to \$142 million at December 31, 2007, a decline of \$45 million. The following table details how interest income changed as a result of changes in average earning asset balances (volume) and changes in interest yields (rate).

TABLE OF CONTENTS

Table 10 Interest Income at Redwood Volume and Rate Changes

(In Thousands)	Change in Interest Income Years Ended December 31, 2008 vs. December 31, 2007		
	Volume	Rate	Total Change
Real estate loans	\$(64)	\$460	\$396
Trading securities	46	1,969	2,015

Available-for-sale securities	(50,834)	8,333	(42,501)
Cash and cash equivalents	206	(4,900)	(4,694)
Total Interest Income	\$ (50,646)	\$ 5,862	\$ (44,784)

Interest income declined in 2008 as compared to 2007 primarily because of lower volume due to negative MVA on securities that reduced average asset balances. Interest income on AFS securities was \$85 million for 2008 as compared to \$128 million for 2007, a decline of \$43 million. Although short-term LIBOR index rates have generally been lower during 2008 as compared to 2007, the yields we accrete on many available-for-sale (AFS) securities have increased to market rates as a result of impairment write-downs.

The following table presents the components of the interest income we earned on AFS securities in 2008 and 2007.

Table 11 Interest Income AFS Securities at Redwood

47

TABLE OF CONTENTS

We reduced the cost basis of many of our AFS securities through impairment charges during 2008 and 2007 and increased the amount of current principal face designated as credit reserves. The more credit reserves we designate on securities reduces the amount of discount that we amortize into income over time. The adequacy of these credit reserves is based upon the long term performance of these securities and is subject to change over time.

The most significant economic factor affecting the performance of IGS is the rate of principal repayments. As these investments primarily represent senior cash flows, we do not expect a high level of losses. Our IGS returns are therefore more sensitive to changes in prepayment rates than they are to credit. A pick-up in refinance activity due to lower mortgage rates or other factors would benefit our IGS returns. Average prepayment speeds on prime residential IGS declined to 12% CPR in 2008, as compared to 29% CPR in 2007.

The most significant economic factors affecting the performance of CES are the timing and amount of credit losses and the rate of principal repayments. In general, lower credit losses and higher prepayment speeds benefit CES that we buy at a significant discount to face value. Over the past year, delinquencies have been rising and prepayments have been slowing. Serious delinquencies on prime residential CES (loans that are 90+ days delinquent) were 1.70% of current balances as of December 31, 2008, as compared to 0.82% of current balances as of December 31, 2007. Serious delinquencies on commercial CES (loans that are 60+ days delinquent) were 1.15% of current balances as of December 31, 2008, as compared to 0.36% of current balances as of December 31, 2007. Average prepayment speeds on prime residential CES declined to 15% CPR in 2008, as compared to 21% CPR in 2007. There are generally no prepayments on commercial CES.

The following table details how interest expense at Redwood changed as a result of changes in average debt balances (volume) and interest yields (rate).

Table 12 Interest Expense at Redwood Volume and Rate Changes

(In Thousands)	Change in Interest Expense Years Ended December 31, 2008 vs. December 31, 2007		
	Volume	Rate	Total Change
Short-term debt	\$ (3,435)	\$ (456)	\$ (3,891)
Long-term debt	1,675	(3,178)	(1,503)
Total Interest Expense	\$ (1,760)	\$ (3,634)	\$ (5,394)

Interest expense decreased primarily because of lower volume due to the paydown of short term debt during 2008. Benchmark LIBOR interest rates on our long term debt also declined during 2008, which also contributed to the

decline in interest expense.

The following table presents the components of operating expenses at Redwood for 2008 and 2007.

Table 13 Operating Expenses at Redwood

(In Thousands)	Year Ended December 31,	
	2008	2007
Fixed compensation expense	\$ 18,228	\$ 17,779
Variable compensation expense	2,385	1,787
Equity compensation expense	12,264	12,249
Severance expense	1,814	3,720
Total compensation expense	34,691	35,535
Systems	8,831	9,547
Due diligence	59	1,080
Office costs	7,201	5,200
Accounting and legal	8,013	3,674
Other operating expenses	3,299	3,519
Total Operating Expenses	\$ 62,094	\$ 58,555

48

TABLE OF CONTENTS

Operating expenses in 2008 were higher than for the same periods in 2007, primarily due to an increase in non-recurring legal expenses and consulting fees.

The following table details the components of realized gains on sales and calls, net, for 2008 and 2007.

Table 14 Realized Gains and Losses on Sales and Calls, Net

(In Thousands)	Year Ended December 31,	
	2008	2007
Realized (losses) gains on sales of:		
Real estate loans	\$ (18)	\$ 678
Real estate securities	1,901	(6,147)
Interest rate agreements		439
Total (losses) gains on sales	1,883	(5,030)
Net gains on repurchase of Sequoia ABS	926	12,500
Net (losses) gains on calls	(66)	5,311
Gains on deconsolidation	5,753	
Total Realized Gains (Losses) on Sales and Calls, Net	\$ 8,496	\$ 12,781

Realized gains on sales and calls, net, were \$8 million during 2008 as compared to \$13 million during 2007, a decline of \$5 million. This decline reflected fewer repurchases of Sequoia ABS previously issued to third parties. Offsetting this decline was a \$6 million gain due to the deconsolidation of certain Sequoia secured borrowings, which was triggered by the sale of our variable interests in those secured borrowings during the fourth quarter of 2008. This deconsolidation is discussed further in the Results of Operations Sequoia section that follows.

Results of Operations The Fund

The Fund was established to capitalize on the dislocation in the non-prime residential and CDO markets. The Fund received \$96 million in commitments from investors, including a \$50 million commitment from Redwood. As the majority owner and manager of the Fund, we consolidate the Fund's assets, liabilities, and minority interest for financial reporting purposes. The Fund became fully invested in the third quarter of 2008.

Net interest income at the Fund was \$10 million in 2008. This amount was derived from interest income earned on AFS securities. The Fund acquired \$73 million of IGS securities at a weighted average price of 55% during 2008.

The following table presents the components of the \$10 million of interest income for AFS securities at the Fund in 2008.

Table 15 Interest Income AFS Securities at the Fund

Year Ended December 31, 2008					Yield as a Result of		
(Dollars in Thousands)	Interest Income	Discount Amortization	Total Interest Income	Average Amortized Cost	Interest Income	Discount Amortization	Total Interest Income
IGS							
Residential	\$ 1,823	\$ 3,935	\$5,758	\$36,603	4.98 %	10.75 %	15.73 %
CDO	2,297	1,128	3,425	15,967	14.39 %	7.06 %	21.45 %
Total IGS	4,120	5,063	9,183	52,570	7.84 %	9.63 %	17.47 %
CES							
Residential	18	31	49	185	9.73 %	16.76 %	26.49 %
CDO	733	261	994	6,442	11.38 %	4.05 %	15.43 %
Total CES	751	292	1,043	6,627	11.33 %	4.41 %	15.74 %
Total Real Estate Securities	\$ 4,871	\$ 5,355	\$10,226	\$59,197	8.23 %	9.05 %	17.28 %

In addition to interest income on securities, the Fund realized gains of \$2 million as a result of the sale of one asset during 2008.

TABLE OF CONTENTS

The following table details the components of the \$10 million interest income at the Fund that were attributable to changes in average earning asset balances (volume) and changes in interest yields (rate).

Table 16 Interest Income at the Fund Volume and Rate Changes

Change in Interest Income Years Ended
December 31, 2008 vs. December 31,
2007

(In Thousands)	Volume	Rate	Total Change
Available-for-sale securities	\$ 10,226	\$	\$ 10,226
Cash and cash equivalents	187		187
Total Interest Income	\$ 10,413	\$	\$ 10,413

As the Fund was started late in 2007, the change in interest income is entirely attributed to an increase in volume.

Results of Operations Sequoia

Sequoia is our brand name for the residential real estate loan securitization entities that we sponsor. Although our exposure to the loans collateralizing these entities is limited to our investments in each Sequoia securitization, we are required under GAAP to consolidate the assets and liabilities of most Sequoia entities on our consolidated balance sheets. Our investment in each Sequoia entity is separate and independent, thus diminished performance on one of our investments would have no effect on our investments in the other Sequoia entities. Sequoia loans and ABS issued are reported on an amortized cost basis. The net interest income reported represents the GAAP earnings we record on our investments in these entities and any net interest earned during the accumulation of loans for securitization.

The following table presents the net interest (loss) income after provision and MVA at Sequoia for 2008 and 2007.

Table 17 Net Interest (Loss) Income after Provision and MVA at Sequoia

Year Ended December 31, 2008

Provision for loan losses	(10,461)		(10,461)		
Market valuation adjustments, net	(633)		(633)		
Net Interest (Loss) Income After					
Provision and MVA at Sequoia	\$66,728	\$(40,287)	\$26,441		

Net interest (loss) income after provision and MVA at Sequoia was a loss of \$33 million in 2008 as compared to income of \$26 million in 2007, a decline of \$59 million. The primary reason for this decline was higher loan loss provision expenses recorded during 2008. The provision for loan losses was \$55 million for 2008, as compared to \$10 million for 2007, an increase of \$45 million. The allowance for loan losses increased to \$36 million or 0.77% of the residential loan balance at December 31, 2008, from \$18 million or 0.26% at December 31, 2007. Serious delinquencies (90+ days delinquent) increased to \$120 million or 2.61% of residential loan balances at December 31, 2008, from \$68 million or 0.96% at December 31, 2007.

Although we report our provision, allowance, and delinquency information on a consolidated basis, the credit performance of each Sequoia securitization is separate and independent and may vary significantly from the credit performance of other Sequoia securitizations. We may be required for GAAP reporting purposes to record an allowance for loan losses on certain pools of loans that in aggregate exceeds our equity investment at risk in those pools. As of December 31, 2008, we had recorded loan loss provision expenses that exceeded the outstanding principal face amount of our investments in two consolidated Sequoia securitizations. To the extent actual and expected losses on the collateral pools increase, the disparity between the reported GAAP book value of our investments and their economic value could grow during 2009.

During the fourth quarter of 2008, we completed a sale of our variable interests in three Sequoia securitizations backed by hybrid loans originated during 2007. The credit performance of these loans had deteriorated over the past year and we had recorded a loan loss provision expense in excess of our investment as of September 30, 2008. Upon the sale of our variable interests, which included the junior economic interests (or CES) and associated call rights of each securitization, we determined after completing a FAS 140 and FIN 46(R) accounting analysis that we should derecognize the associated assets and liabilities of these securitizations for financial reporting purposes. We derecognized \$1.266 billion of real estate loans and other assets and \$1.278 billion of ABS issued and other liabilities, for a net realized gain of \$12 million. As a result of these transactions, we were required to recognize certain ABS issued by Sequoia and owned by Acacia entities. These ABS issued had been previously eliminated upon consolidation for financial reporting purposes. We recognized a \$7 million negative market valuation adjustment related to these Sequoia ABS issued in accordance with our election to adopt FAS 159 for all assets at Acacia. We also recognized less than \$1 million of other offsetting positive adjustments. The net effect of all transactions associated with this deconsolidation was a \$5 million increase in realized gains on sales and calls, net, which was recorded to our consolidated statement of (loss) income as of December 31, 2008.

Net interest income at Sequoia was \$52 million in 2008 as compared to \$73 million in 2007, a decline of \$21 million. The primary reasons for this decline were lower benchmark LIBOR rates on adjustable rate

TABLE OF CONTENTS

residential loans and lower average residential loan balances. Average loan balances at Sequoia decreased to \$6.4 billion in 2008 compared to \$7.2 billion in 2007, due to loan principal repayments, and lack of new loan acquisition activity during 2008. The average prepayment rate for Sequoia loans during 2008 was 19%, compared to 39% in 2007 and 46% in 2006. At December 31, 2008, 85% of loan principal outstanding consisted of one-month or six-month LIBOR ARMs and 15% of loan principal outstanding consisted of hybrid ARMs.

Interest income at Sequoia was \$305 million in 2008, as compared to \$479 million in 2007, a decline of \$174 million. The following table details how interest income changed as a result of changes in average earning asset balances (volume) and changes in interest yields (rate).

Table 18 Interest Income at Sequoia Volume and Rate Changes

(In Thousands)	Change in Interest Income Years Ended December 31, 2008 vs. December 31, 2007		
	Volume	Rate	Total Change
Real estate loans	\$ (96,612)	\$ (77,090)	\$ (173,702)
Cash and cash equivalents		62	62
Total Interest Income	\$ (96,612)	\$ (77,028)	\$ (173,640)

Interest income declined because of lower volume due to repayments on existing loans with no offsetting loan acquisitions and short-term interest rates have generally been lower during 2008 than 2007, as most of our loans are indexed to short-term rates.

A significant offset to interest income is the loan premium amortization that we expense each period to reduce the net unamortized purchase premium for loans at Sequoia. Loan premium amortization was \$22 million for 2008 as compared to \$38 million for 2007, a decline of \$16 million. As a percent of gross interest income, loan premium amortization was 7% for both 2008 and 2007, although the amount and timing of periodic amortization has historically been volatile due to the GAAP accounting elections we apply. For the last several years, loan premium amortization has not kept pace with loan prepayments due to the amortization method we apply for a portion of loans at Sequoia. This method more closely links amortization to short-term interest rates and resulted in lower premium expenses during prior periods when LIBOR increased. Conversely, since LIBOR declined during the fourth quarter of 2008, we expect our premium amortization expenses to increase in future periods.

The following table details how interest expense at Sequoia changed as a result of changes in average debt balances (volume) and interest yields (rate).

Table 19 Interest Expense at Sequoia Volume and Rate Changes

(In Thousands)	Change in Interest Expense Years Ended December 31, 2008 vs. December 31, 2007		
	Volume	Rate	Total Change
ABS Issued	\$ (52,243)	\$ (73,635)	\$ (125,878)
Repurchase agreements	(38,979)		(38,979)
Total Interest Expense	\$ (91,222)	\$ (73,635)	\$ (164,857)

Interest expense declined because of lower average borrowings and because interest rates have generally been lower during 2008 than 2007. The reduction in volume was primarily due to the paydowns on ABS issued with no new issuances during 2008.

TABLE OF CONTENTS

The following table presents the cost of funds at Sequoia for 2008 and 2007.

Table 20 Cost of Funds of Asset-Backed Securities Issued by Sequoia

(Dollars in Thousands)	Year Ended December 31,			
	2008		2007	
Interest expense	\$274,056		\$575,363	
Issuance premium amortization, net	(5,171)		(8,189)	
Deferred bond issuance amortization	6,414		22,009	
Interest rate agreements, net	1,304		(8,228)	
Total ABS Issued Interest Expense	\$276,603		\$580,955	
Average balance of ABS issued	\$6,233,433		\$10,171,192	
Interest expense	4.40	%	5.66	%
Issuance premium amortization, net	(0.08	)%	(0.08	)%
Deferred bond issuance amortization	0.10	%	0.21	%
Interest rate agreements, net	0.02	%	(0.08	)%
Cost of Funds of ABS Issued	4.44	%	5.71	%

Sequoia ABS issued generally pays interest based on one-, three-, or six-month LIBOR, or in some instances, passes through the weighted average interest earned on the underlying assets. Interest expense declined due to lower average balances of ABS and lower interest rates. Some of the ABS issued was sold at a premium, which we amortize as a component of interest expense over time. We also defer and amortize Sequoia ABS issuance costs over time as a component of interest expense.

Results of Operations **Acacia**

Acacia is our brand name for the CDO securitization entities that we sponsor. The assets held by Acacia entities primarily consist of IGS and some CES. These securities are backed by prime and non-prime residential real estate loans and commercial real estate loans. Acacia also owns other real estate assets such as real estate CDO securities, corporate debt issued by equity REITs, real estate loans, and synthetic real estate assets. Although our exposure to the assets collateralizing these entities is limited to our investments in each Acacia securitization, we are required under GAAP to consolidate the assets and liabilities of Acacia entities on our consolidated balance sheets. Our investment in each Acacia entity is separate and independent, thus diminished performance on one of our investments would have no effect on our investments in the other Acacia entities.

Prior to 2008, we were required under GAAP to record most of the assets at Acacia at their estimated fair values and their paired liabilities at their amortized cost. This created an accounting discrepancy that resulted in a significant disparity between the GAAP book value and the economic value of our investments in Acacia. As of January 1, 2008, we elected to adopt FAS 159 to value both the assets and liabilities of the Acacia entities, which significantly improved this disparity.

TABLE OF CONTENTS

The following table presents the net interest (loss) income after MVA at Acacia for 2008 and 2007.

Table 21 Net Interest (Loss) Income After MVA at Acacia

Net Interest Income	19,414			25,161	20,018	45,179		
Market valuation adjustments, net	(87,820)			(1,087,245)		(1,087,245)		
Net Interest (Loss)								
Income After MVA at Acacia	\$(68,406)			\$(1,062,084)	\$20,018	\$(1,042,066)		

Interest income from trading securities in 2007 includes \$245 million from AFS securities and less than \$1 million (1) from trading securities. In January 2008, we elected FAS 159 for all AFS securities at Acacia. For comparison purposes, 2007 interest income from AFS and trading securities is shown on one line.

Net interest (loss) income after MVA at Acacia was a loss of \$68 million in 2008 as compared to a loss of \$1 billion in 2007, a decline in loss of \$974 million. The primary reason for this decline in loss was lower negative MVA as a result of recording both the assets and liabilities of Acacia at fair value through our consolidated statements of (loss) income beginning in 2008. Negative MVA was lower by \$1 billion in 2008, primarily due to offsetting \$1.4 billion in MVA on assets owned by Acacia by \$1.3 billion in MVA on ABS issued by Acacia. We detail these adjustments in a separate Mark-to-Market Adjustments section.

Net interest income at Acacia was \$19 million in 2008 as compared to \$45 million in 2007, a decline of \$26 million. This decline was primarily due our adoption of FAS 159 and the resulting reclassification of most Acacia assets from AFS to trading on January 1, 2008. Changes in value on Acacia assets and liabilities are now recorded as a component of market valuation adjustments, net, on our consolidated statements of (loss) income, and not as a component of net interest income. This includes market valuation adjustments on derivatives used to hedge the interest rate exposure of Acacia liabilities. Certain valuation changes on derivatives previously accounted for as cash flow hedges were recorded as a component of interest expense during 2007.

We received \$18 million of cash distributions from our Acacia equity investments during 2008, \$2 million of which related to a resolved claim from our call of Acacia 3 in 2006. During 2008, nine of the ten of our Acacia equity investments stopped receiving cash distributions due to performance deficiencies (consisting primarily of rating

agency downgrades on securities held at Acacia entities), which significantly affected the yield we expect to earn on these investments. One of our Acacia equity investments is currently receiving cash distributions and nine are not receiving cash distributions.

Interest income at Acacia was \$161 million in 2008, as compared to \$256 million in 2007, a decline of \$95 million.

The following table details how interest income changed as a result of changes in average earning asset balances (volume) and changes in interest yields (rate).

54

TABLE OF CONTENTS

Table 22 Interest Income at Acacia Volume and Rate Changes

(In Thousands)	Change in Interest Income Years Ended December 31, 2008 vs. December 31, 2007		
	Volume	Rate	Total Change
Real estate loans	\$ (455)	\$ 348	\$ (107)
Trading securities	(176,930)	86,349	(90,581)
Other investments	1,522	(1,807)	(285)
Cash and cash equivalents	(2,634)	(1,554)	(4,188)
Total Interest Income	\$ (178,497)	\$ 83,336	\$ (95,161)

Interest income declined primarily because of lower volume due to impairment charges on securities which reduced average balances. Accounting changes related to the adoption of FAS 159 had a two-sided effect on the change in interest income. All assets owned at Acacia are marked-to-market so we no longer amortize purchase discounts into income, resulting in lower interest income recognized. However, the yields we accrete on many securities have increased as a result of lower market values, despite generally lower short-term LIBOR index rates during 2008 as compared to 2007.

Interest expense at Acacia was \$141 million in 2008, as compared to \$210 million in 2007, a decline of \$69 million.

The following table details how interest expense at Acacia changed as a result of changes in average debt balances (volume) and interest yields (rate).

Table 23 Interest Expense at Acacia Volume and Rate Changes

(In Thousands)	Change in Interest Expense Years Ended December 31, 2008 vs. December 31, 2007		
	Volume	Rate	Total Change
ABS Issued	\$ (130,369)	\$ 77,814	\$ (52,555)
Repurchase agreements	(16,841)		(16,841)
Total Interest Expense	\$ (147,210)	\$ 77,814	\$ (69,396)

Interest expense declined primarily because of lower volume due to lower average borrowings. The reduction in volume was primarily due to the adoption of FAS 159 and paydowns on ABS issued with no new issuances during 2008. Although interest rates have generally been lower during 2008 than 2007, the market value decreases on Acacia liabilities have increased the yields we recognize for interest expense.

Mark-to-Market Adjustments

Negative mark-to-market adjustments were the most significant factor affecting our earnings for 2008. Mark-to-market adjustments are changes in the fair values of financial assets and liabilities, and REO properties. The accounting rules that determine the measurement of fair values and the timing and amount of market valuation adjustments that flow through our consolidated statements of (loss) income are complex and may not clearly reflect the timing, nature, and extent of economic changes impacting the fair values of our investments during any specific reporting period. The Recent Developments section details the economic factors that impacted the fair values of our investments during the quarter.

55

TABLE OF CONTENTS

The following tables detail the mark-to-market adjustments that occurred in 2008 and 2007, and their effect on our consolidating income statements and balance sheets.

Table 24 Mark-to-Market Adjustments Impact on Consolidating Income Statement and Balance Sheet

(In Millions)	Year Ended December 31, 2008

Mark-to-Market Adjustments at Redwood

At Redwood, we classify most securities (excluding our investments in Sequoia and Acacia) as AFS and report these securities at their fair values in accordance with FAS 115. Net mark-to-market adjustments were negative \$335 million in 2008, as compared to negative \$332 million in 2007.

We recorded \$359 million of other-than-temporary impairments through our income statement for 2008. Most of these impairments were the result of changes in the market's expectation of cash flows and credit and our assessment that the values of certain securities would not recover within a reasonable period of time. We recorded \$145 million of other-than-temporary impairments through our income statement for 2007, primarily due to changes in the market's expectation of cash flows and credit. We continue to expect impairments to occur and the levels of impairments may vary significantly from quarter to quarter.

56

TABLE OF CONTENTS

The following tables detail the mark-to-market adjustments on Redwood securities by underlying collateral type and by vintage for 2008.

Table 25 Mark-to-Market Adjustments by Underlying Collateral Type at Redwood

(In Millions)	Year Ended December 31, 2008				MTM ⁽¹⁾ Percentage
	IGS	CES	Loans, & Derivatives	Total	
Residential					
Prime	\$ (73)	\$ (97)	\$	\$ (170)	(59)%
Non-prime	(38)	(21)		(59)	(46)%

Total Mark-to-Market Adjustments	\$ (115)	\$ (212)	\$ (8)	\$ (335)	

This percentage represents the mark-to-market adjustments taken as a percentage of the reported market values at (1) the beginning of the period, or the purchase price if acquired during the period. It illustrates the price declines by collateral type for 2008. These price declines may not be indicative of price declines in the market in general.

Table 26 Mark-to-Market Adjustments by Vintage on Securities at Redwood

Year Ended December 31, 2008

(In Millions)	Vintage					Loans & Derivatives	Total
	2004 & Earlier	2005	2006	2007	2008		
Mark-to-Market Adjustments	\$ (90)	\$ (77)	\$ (84)	\$ (59)	\$ (17)	\$ (8)	\$ (335)

Mark-to-Market Adjustments at the Fund

At December 31, 2008, all of the investments held by the Fund were classified as AFS securities. During 2008, there were \$18 million of mark-to-market adjustments, of which \$15 million were deemed other-than-temporary impairments. There were no other-than-temporary impairments during 2007.

The following tables detail the mark-to-market adjustments on securities at the Fund by underlying collateral type.

Table 27 Market-to-Market Adjustments by Underlying Collateral Type at the Fund

(In Millions)	Year Ended December 31, 2008			MTM ⁽¹⁾ Percentage
	IGS	CES	Total	
Residential non-prime	\$ (14)	\$ (1)	\$ (15)	(24)%
CDO	1	(4)	(3)	(11)%
Total Mark-to-Market Adjustments	\$ (13)	\$ (5)	\$ (18)	

This percentage represents the mark-to-market adjustments taken as a percentage of the reported market values at (1) the beginning of the period, or the purchase price if acquired during the period. It illustrates the price declines by collateral type for 2008. These price declines may not be indicative of price declines in the market in general.

Mark-to-Market Adjustments at Sequoia

All of the investments held by Sequoia were classified as held-for-investment loans or REO as of December 31, 2008. We had \$6 million of mark-to-market adjustments during 2008 stemming from a decrease in the fair value of REO.

57

TABLE OF CONTENTS

Mark-to-Market Adjustments at Acacia

During 2008, the fair values of Acacia assets and liabilities, net, declined by \$81 million. We also include \$7 million of intercompany market valuation adjustments related to the derecognition of certain Sequoia ABS issued assets at Acacia entities during the fourth quarter of 2008. These ABS issued were previously eliminated upon consolidation.

The following table details the mark-to-market adjustments at Acacia entities during 2008.

Table 28 Mark-to-Market Adjustments by Underlying Collateral Type at Acacia

(In Millions)	Year Ended December 31, 2008				MTM ⁽¹⁾ Percentage
	IGS	CES	Loans, Liabilities & Derivatives	Total	
Residential

ABS Issued			1,307	1,307	
Deconsolidation adjustment	(7)			(7)	
Total Mark-to-Market Adjustments	\$ (794)	\$ (484)	\$ 1,190	\$ (88)	

This percentage represents the mark-to-market adjustments taken as a percentage of the reported market values at (1) the beginning of the period, or the purchase price if acquired during the period. It illustrates the price declines by collateral type for 2008. These price declines may not be indicative of price declines in the market in general.

On January 1, 2008, we adopted the fair value option under FAS 159 for the assets and liabilities owned by Acacia securitization entities, which we consolidate for financial reporting purposes. In accordance with FAS 159, we decreased the carrying value of Acacia assets and liabilities by a net \$1.5 billion, and recorded this fair value change as a one-time cumulative-effect adjustment to retained earnings, a component of stockholders' equity (deficit). All future mark-to-market adjustments on Acacia are recorded through our consolidated statements of (loss) income. Due to the illiquid nature of Acacia investments and continued market volatility, it is difficult to anticipate periodic valuation changes in future quarters.

Results of Operations 2007 vs. 2006

Interest Income Consolidated

Interest income consists of the interest earned on interest-bearing assets, adjusted for amortization of discounts and premiums and provisions for loan credit losses. The table below summarizes interest income earned on the following types of interest-bearing assets consolidated on our balance sheet: real estate loans, real estate securities, other real estate investments, non-real estate investments, and cash.

58

TABLE OF CONTENTS

Table 29 Interest Income and Yield

	Year Ended December 31,					2006				
	(Dollars in Thousands) 2007									
	Interest Income	Percent of Total Interest Income	Average Balance	Yield		Interest Income	Percent of Total Interest Income	Average Balance	Yield	
Real estate loans, net of provision for credit losses	\$467,677	54.67 %	\$8,056,936	5.80 %		\$608,868	68.78 %	\$10,652,094	5.72 %	
Real estate securities	364,023	42.55 %	3,599,396	10.10 %		265,353	29.98 %	2,612,934	10.15 %

Non-real estate investments	2,590	0.30 %	49,752	5.21 %						
Cash and cash equivalents	15,488	1.81 %	332,856	4.65 %		10,939	1.24 %	268,340	4.08 %	

Total Interest Income \$855,540 100.00% \$12,072,657 7.08 % \$885,160 100.00% \$13,533,368 6.54 %

The following tables details how our GAAP interest income changed as a result of changes in average earning asset balances (volume) and changes in yields (rate) at Redwood and our consolidated entities for 2007, as compared to 2006.

Table 30 Volume and Rate Changes for Interest Income

(In Thousands)	Change in Interest Income Years Ended December 31, 2007 vs. December 31, 2006		
	Volume	Rate	Total Change
Real estate loans	\$ (148,161)	\$ 20,137	\$ (128,024)
Real estate securities	102,594	1,838	104,432
Other investments	2,590		2,590
Cash and cash equivalents	2,562	1,987	4,549
Total Interest Income	\$ (40,415)	\$ 23,962	\$ (16,453)

Our reported interest income decreased by \$16 million, from \$884 million in 2006, to \$868 million in 2007. Interest income declined primarily because of lower volume due to fewer acquisitions of real estate loans, offset by greater acquisitions of securities. Short-term interest rates have been generally higher during 2007 than 2006, which partially offset the decline in interest income.

Below is a further breakdown and discussion of the year-over-year changes for interest-bearing real estate loans, real estate securities, other real estate investments, and cash.

Interest Income Real Estate Loans

The following tables provide detail on interest income earned on our residential and commercial real estate loan portfolios for 2007 and 2006.

(Dollars in Thousands)	Interest Income	Net (Premium) Discount Amortization	Reversal of Provision For Credit Losses	Total Interest Income	Average Balance	Interest Income	(Premium) Discount Amortization and Credit Provision	Total Interest Income
Residential loans	\$654,192	\$(48,700)	\$394	\$605,886	\$10,611,827	6.17 %	(0.46)%	5.71 %
Commercial loans	2,849	168	(35)	2,982	40,267	7.08 %	0.33 %	7.41 %
Total Loans	\$657,041	\$(48,532)	\$359	\$608,868	\$10,652,094	6.18 %	(0.46)%	5.72 %

Residential Real Estate Loans

Total interest income on residential real estate loans decreased to \$469 million for 2007 from \$606 million for 2006. This was primarily a result of lower average balances of residential real estate loans and increased credit provisions in 2007 relative to 2006. Our residential real estate loan balance decreased to \$7.2 billion at December 31, 2007 from \$9.3 billion at December 31, 2006, as our loans paid down and we had a relatively low level of loan acquisitions. Of the \$7.2 billion of residential loans outstanding at December 31, 2007, 68% consisted of one or six-month LIBOR adjustable-rate residential loans (LIBOR ARMs). The average constant prepayment rate (CPR) for our LIBOR ARMs was 46% in 2006, 38% in 2007, and 27% on an annualized basis in the fourth quarter of 2007.

Loan premium amortization expense was \$38 million for 2007 and \$49 million for 2006. On a percentage basis, loan premium amortization expense for our LIBOR ARMs lagged the rate of decrease in our LIBOR ARM residential loan balance during these periods due to the amortization methods we apply.

In 2007, we increased our provision for credit losses for residential loans by \$11 million. In 2006, we reduced our provision for credit losses for residential loans by less than \$1 million. On a percentage basis, our credit reserve increased to 0.26% of the residential loan balance at December 31, 2007 from 0.22% at December 31, 2006. Serious delinquencies (defined as those loans that are 90 days or more delinquent, in foreclosure or real estate owned) in residential loans increased from 0.71% of the current loan balance at December 31, 2006 to 0.96% at December 31, 2007. As a percentage of original balance, serious delinquencies increased from 0.21% at December 31, 2006 to 0.24% at December 31, 2007.

Commercial Real Estate Loans

Interest income on commercial real estate loans decreased by \$4 million for 2007 compared to the previous year. The majority of the decrease related to fully reserving for an anticipated loss on a mezzanine commercial loan financing on a condominium-conversion project during the first quarter of 2007. The total provision for this loan was \$3 million, of which \$2 million related to principal (and taken through the credit provision) and \$1 million to accrued interest (and taken as a reduction in interest income).

TABLE OF CONTENTS

Interest Income Real Estate Securities

The tables below present the income and yields of the components of our real estate securities for 2007 and 2006.

Investment Grade Securities

Interest income from IGS increased to \$161 million in 2007 as compared to \$114 million in 2006, due primarily higher average balances of IGS in 2007. The majority of the IGS we acquired during 2007 were residential IGS. The overall yield on our IGS portfolio increased during the year, reflecting increasing coupon rates on the underlying loans. The decrease in yields on commercial IGS in 2007 relative to 2006 was due to the sale of commercial IOs in 2006 owned by earlier Acacia entities.

Residential Credit Enhancement Securities

Interest income from our residential CES was \$157 million for 2007, a \$32 million increase over 2006. This increase is the result of higher yields and higher average balances. Faster than anticipated prepayment rates on adjustable-rate mortgages (ARMs) have also contributed to higher levels of discount amortization. ARMs represented (by market

value) 44% of our residential CES portfolio at December 31, 2007, and average actual prepayment rates were in excess of 34% in 2007 compared to our initial expectations (at the time of acquisition) of 20% to 25%.

61

TABLE OF CONTENTS

We own residential real estate securities that are backed by option ARMs that give the borrower the option of making a minimum payment that is less than the amount of interest owed for that loan period. In both 2007 and 2006, we recognized \$5 million of neg am interest on securities rated BB and higher and deferred recognition of neg am interest of \$4 million on our unrated and B-rated securities backed by option ARMs. Our cumulative deferred neg am interest was \$8 million at December 31, 2007, an increase from \$4 million at December 31, 2006.

Commercial Credit Enhancement Securities

Interest income from our commercial CES was \$44 million for 2007, an \$18 million increase over 2006. This increase is primarily the result of significantly higher average balances. The average yield earned on our commercial CES portfolio for 2007 was 9.55%, an increase from 8.73% for 2006. Similar to residential CES, commercial CES are acquired at a net discount. Commercial CES generally have a ten year maturity and are not expected to receive principal prepayments prior to maturity.

Interest Income Cash and Cash Equivalents

Interest income from cash and cash equivalents was \$15 million for 2007, an increase from \$11 million for 2006. Average cash balances were higher for 2007 as compared to 2006 as we had higher levels of excess capital. Yields were marginally higher for 2007 as compared to 2006.

Interest Expense Consolidated

Interest expense consists of interest incurred on consolidated ABS issued by sponsored securitization entities, Redwood debt, and Redwood subordinated notes. The table below presents our interest expense and balances for these components for 2007 and 2006.

The table below presents our interest expense and balances for these components for 2007 and 2006.

Table 33 Total Interest Expense

(Dollars in Thousands)	Year Ended December 31,			
	2007		2006	
Consolidated ABS issued	\$ 587,363		\$ 674,629	
Short-term debt	60,029		29,836	
Long-term debt	10,778		423	
Total Interest Expense on Total Obligations	\$ 658,170		\$ 704,888	
Average balance of ABS issued	\$ 10,171,192		\$ 12,497,551	
Short-term debt	1,024,829		493,357	
Long-term debt	126,877		5,336	
Average Total Obligations	\$ 11,322,898		\$ 12,996,244	
Cost of funds of ABS issued	5.72	%	5.36	%

Cost of funds of short-term debt	5.86	%	6.05	%
Cost of funds of long-term debt	8.49	%	7.93	%
Total Cost of Funds of Obligations	5.81	%	5.42	%

The following table details how our GAAP interest expense changed as a result of changes in borrowings (volume) and yields (rate) at Redwood and our consolidated entities for 2007, as compared to 2006.

Table 34 Volume and Rate Changes for Interest Expense

(In Thousands)	Change in Interest Expense Years Ended December 31, 2007 vs. December 31, 2006		
	Volume	Rate	Total Change
ABS issued	\$ (123,465)	\$ 36,199	\$ (87,266)
Short-term debt	32,513	(2,320)	30,193
Long-term debt	9,635	720	10,355
Total Interest Expense on Total Obligations	\$ (81,317)	\$ 34,599	\$ (46,718)

62

TABLE OF CONTENTS

Total consolidated interest expense decreased to \$658 million in 2007 from \$705 million in 2006. The primary reason relates to a decline in the average balance outstanding of ABS issued offset to some extent by higher average balances of Redwood debt and subordinated notes.

Interest expense on consolidated ABS decreased by \$87 million, to \$587 million in 2007, from \$674 million in 2006.

The reduction in consolidated ABS interest expense was caused by a decline in the average balance of outstanding consolidated ABS issued as a result of prepayments of the loans within these securitization entities. Offsetting some of the decline in balances was the higher cost of funds due to an increase in short-term interest rates during the first nine months of 2007 as most of our debt and consolidated ABS issued is indexed to one, three, or six-months LIBOR.

These factors are illustrated in the volume and rate change table below.

Interest expenses on Redwood debt increased by \$30 million to \$60 million in 2007 from \$30 million in 2006 as a result of increased use of Redwood debt primarily during the first half of 2007. The average balance of our outstanding Redwood debt increased during 2007 due to a high level of financing for the acquisition of residential real estate loans and securities prior to the securitization of these assets through Sequoia and Acacia, (including from calling some older Sequoia loan securitizations) and financing of AAA and AA-rated real estate securities during the early part of the year.

Our subordinated notes (issued in 2006 and May 2007) pay interest expense at three-month LIBOR plus 225 basis points (2.25%). The cost of funds accrued on these notes includes the amortization of deal costs.

The following table presents the components of our interest costs on ABS issued for 2007 and 2006. ABS issuance premiums are created when ABS are issued at prices greater than principal value, such as interest-only securities (IOs).

Table 35 Cost of Funds of Asset-Backed Securities Issued

Total change in fair value of trading instruments	(82,953)	(5,755)
Lower of cost or market adjustment on real estate loans	(2,978)	
Other than temporary impairments		
Residential securities	(979,962)	(3,618)
Commercial securities	(10,455)	(3,213)
CDO securities	(185,101)	
Total Market Valuation Adjustments, net	\$ (1,261,449)	\$ (12,586)

Our portfolio of other real estate investments (OREI) accounted for as trading instruments was \$12 million at December 31, 2007. We did not own any OREI at December 31, 2006. Due to the implementation of a new accounting standard, Statement of Financial Accounting Standards No. 155, *Accounting for Certain Hybrid Financial Investments* (FAS 155) in the first quarter of 2007, we elected at the end of the first quarter to classify certain securities (IOs, NIMs, and residuals) that contain embedded derivatives as trading instruments. We had previously classified these securities as available-for-sale (AFS). The fair value of OREI declined in 2007 by \$24 million as spreads widened considerably as a result of the dislocation of the residential mortgage-backed securities market.

Credit default swaps held in our Acacia securitizations are derivatives and accounted for as trading instruments. The fair value of these credit default swaps decreased \$54 million in 2007 as spreads widened out and prices fell on the

underlying securities that these credit default swaps referenced.

The fair values of interest rate agreements not designated as cash flow hedges decreased by \$4 million during 2007. All changes in fair values of these interest rate agreements are recognized through the income statement. We use interest rate agreements to manage our interest rate risks.

We recorded negative \$3 million of market valuation adjustments on our held-for-sale residential real estate loans during 2007 as these are reported on our balance sheet at the lower of cost or market (LOCOM). Once transferred from held-for-investment to held-for-sale the loans are required to be revalued quarterly and recorded at LOCOM. Write-downs to current market value are recorded through the income statement. We had no held-for-sale loans during 2006.

We recorded \$1.2 billion of other-than-temporary impairments through our income statement in 2007 with \$1.1 billion of this amount recorded in the fourth quarter. The majority of these fourth quarter impairments (over 70%) were due to our assessment that the values of many types of securities would not recover within a reasonable period of time.

64

TABLE OF CONTENTS

Operating Expenses

Components of our operating expenses for 2007 and 2006 are presented in the table below.

Table 37 Operating Expenses

(In Thousands)	Year Ended December 31,	
	2007	2006
Fixed compensation expense	\$ 17,779	\$ 13,871
Variable compensation expense	1,787	7,709
Equity compensation expense	12,249	11,498
Severance expense	3,720	
Total compensation expense	35,535	33,078
Systems	9,547	7,947
Due diligence	1,080	4,035
Office costs	5,200	4,278
Accounting and legal	3,674	3,533
Other operating expenses	3,519	3,054
Total Operating Expenses	\$ 58,555	\$ 55,925

Total operating expenses were \$59 million for 2007, an increase of \$3 million from 2006. The primary reason was an increase in compensation expense, although the various components of this expense either increased and decreased from last year's levels. There was severance expense as part of a realignment of residential and commercial operations in 2007 and no such expense in 2006. Fixed compensation expense includes employee salaries and related employee benefits. Our average headcount increased 13% in 2007 over 2006 levels and combined with salary increases in 2007 accounts for the 28% year over year increase in the fixed compensation. Variable compensation expense was lower in 2007 due to lower employee bonus expenses.

Non-compensation expenses were relatively the same in 2007 as in 2006. The ongoing office and system related costs were in line with our staffing growth. These increases were offset by a decrease in due diligence expenses as our

acquisition activity was lower in 2007.

Realized Gains on Sales and Calls

Total realized gains on sales and calls were lower for 2007 compared to 2006. The primary reason was the fact that prices on securities fell throughout 2007 and, as a result, we did not choose to exercise our call rights on eligible Acacia entities. In 2006, we called three Acacias, sold the underlying assets and recognized gains after paying back the related debt. Early in 2007, we called one Acacia and generated some gains. As prices on securities fell in the second half of 2007, the liquidity in the market also became restricted. Early in the second half of 2007, we decided to sell most of our AAA-rated securities funded with debt and did so at a loss, further contributing to the disparity in net (losses) gains on sales between 2007 and 2006.

In the second half of 2007, we acquired certain Acacia ABS at discounts relative to the issued price. These transactions generated a \$13 million gain, which was the difference between our purchase price (\$16 million) and the outstanding amortized principal balance of the ABS acquired (\$29 million).

The table below provides detail of the net realized gains on sales and calls for 2007 and 2006.

Table 38 Realized Gains on Sales and Calls, Net

TABLE OF CONTENTS

Differences between GAAP Net (Loss) Income and Total Taxable Income

The following table details our taxable income and distribution detail for 2008, 2007, and 2006.

Table 39 Taxable Income and Distributions to Shareholders

(In Thousands, Except per Share Data)	Year Ended December 31,		
	2008 est.	2007	2006
Taxable Income			
REIT Taxable Income	\$ 22,755	\$ 161,061	\$ 167,728
Taxable REIT Subsidiary Income	540	3,390	7,326
Total Taxable Income	\$ 23,295	\$ 164,451	\$ 175,054
Distributed to shareholders	\$ 100,140	\$ 146,973	\$ 153,040

Undistributed REIT Taxable Income	\$	\$ 64,572	\$ 50,484
Undistributed REIT Taxable Income per Share		1.99	1.89

For 2008, we paid a regular quarterly dividend of \$0.75 per share, or \$3.00 in total. There were no special dividends paid to shareholders for 2008. The \$3.00 of dividends paid to shareholders for 2008 were characterized as \$2.75 of ordinary income and \$0.25 return of capital. The portion of our dividends characterized as return of capital is not taxable, and reduces the basis of shares held at each quarterly distribution date. For 2007 and 2006, we paid \$5.00 per share and \$5.80 per share in dividends, respectively, all of which was characterized as ordinary income.

Taxable income estimates are not calculated in accordance with GAAP, which can result in significant differences between GAAP (loss) income and taxable income estimates for the same reporting period. The following table reconciles GAAP (loss) income to taxable income for 2008 (estimated), 2007, and 2006.

Table 40 Differences between GAAP Net (Loss) Income and Taxable Income

(In Thousands, Except per Share Data)	Year Ended December 31,		
	2008	2007	2006

Shares used for taxable EPS calculations	32,564	28,402	25,934
Total taxable income per share	\$0.72	\$5.79	\$ 6.75

Potential GAAP Earnings Volatility

We expect quarter-to-quarter GAAP earnings volatility from our business activities at Redwood and our consolidated entities. This volatility can occur for a variety of reasons, including the timing and amount of purchases, sales, calls, and repayment of consolidated assets, changes in the fair values of consolidated assets and liabilities, and certain non-recurring events. In addition, volatility may occur because of technical accounting issues, some of which are described below.

Changes in Premium Amortization for Loans at Sequoia

The unamortized premium for loans owned by Sequoia was \$68 million at December 31, 2008. The amount of periodic premium amortization expense we recognize is volatile and dependent on a number of factors, including credit performance of the underlying loans, changes in prepayment speeds, and changes in short-term interest rates. Loan premium amortization was \$23 million in 2008, \$40 million in 2007, and \$49 million in 2006, illustrating the volatility of this expense.

Changes in Discount Amortization for Securities at Redwood and the Fund

The unamortized discount, net of designated credit reserves, for securities owned at Redwood and the Fund was \$229 million at December 31, 2008. The amount of periodic discount amortization income we recognize is volatile and dependent on a number of factors, including credit performance of the underlying loans, changes in prepayment speeds, and changes in short-term interest rates. Discount amortization on securities was \$24 million in 2008, \$52 million in 2007, and \$38 million in 2006, illustrating the volatility of this expense.

Changes in Fair Values of Securities

All of the securities owned at Redwood and consolidated entities are classified as either trading or available-for-sale (AFS) securities, and in both cases are carried on our consolidated balance sheets at their estimated fair values. For trading securities, changes in fair values are recorded in the consolidated statements of (loss) income. Periodic fluctuations in the values of these investments are inherently volatile and thus can lead to significant GAAP earnings volatility each quarter.

For AFS securities, cumulative unrealized gains and losses are recorded as a component of accumulated other comprehensive (loss) income in our consolidated statements of stockholders' equity (deficit). Unrealized gains and losses are not charged against current earnings to the extent they are temporary in nature. Certain factors may require us however, to recognize these amounts as other-than-temporary impairments and record them through our current earnings. Factors that determine other than temporary impairment include a change in our ability or intent to hold assets, adverse changes to projected cash flows of assets, or the likelihood that declines in the fair values of assets would not return to their previous levels within a reasonable time. Impairments on securities are generally non-recurring and can lead to significant GAAP earnings volatility each quarter.

As of January 1, 2008, we elected to adopt a new accounting standard, FAS 159, to record the assets and liabilities in Acacia and certain other assets at Redwood at fair value with changes in fair value recorded as a component of market valuation adjustments, net, in our consolidated statements of (loss) income. We may also elect the fair value option for certain new acquisitions in the future. Our FAS 159 elections significantly improved the disparity that existed between the GAAP carrying value of our Acacia equity investments and our estimate of their economic value. However, valuation changes in these financial instruments are inherently volatile and can lead to significant GAAP earnings volatility each quarter.

Changes in Fair Values of Derivative Financial Instruments

We can experience significant earnings volatility from our use of derivatives. We generally use derivatives to hedge cash flows on assets and liabilities that have different coupon rates (fixed rates versus floating rates, or floating rates based on different indices). The nature of the instruments we use and the accounting treatment for the specific assets, liabilities, and derivatives may lead to volatile periodic earnings, even when we are meeting our hedging objectives.

All derivatives are accounted for as trading instruments and their changes in market values flow through our consolidated statements of (loss) income. The assets and liabilities we hedge may not be similarly accounted for as our hedging derivatives (e.g., they may be reported at cost, or only impairments may be reported through our consolidated statements of (loss) income). This could lead to reported income and book values in specific periods that do not necessarily reflect the economics of our hedging strategy. Even when the assets and liabilities are similarly accounted for as trading instruments, periodic changes in their value may not coincide as other market factors (e.g., supply and demand) may affect certain instruments and not others at any given time.

Changes in Future Accounting Principles

Changes in future accounting principles can have a significant impact on the amount or timing of our reported GAAP earnings.

67

TABLE OF CONTENTS

Potential Taxable Income Volatility

We expect quarter-to-quarter estimated taxable income volatility for a variety of reasons, including the timing of credit losses and prepayments on our consolidated investments, and equity award taxation, as described below.

Credit Losses on Securities and Loans at Redwood

To determine estimated taxable income we are not permitted to anticipate, or reserve for, credit losses on investments that we purchase at a discount. For tax purposes, we accrete the entire purchase discount on a security into taxable income over the expected life of the security. Estimated taxable income is only reduced when actual credit losses occur. For GAAP purposes, we establish a credit reserve and only amortize a portion of the purchase discount, if any, into income. We are also required to write-down securities that become impaired for GAAP. Our income recognition is therefore faster for tax as compared to GAAP, especially in the early years of owning a security purchased at a discount (when there are generally few credit losses). At December 31, 2008, the cumulative difference between the GAAP and tax amortized costs basis of our residential, commercial, and CDO CES (excluding our investments in Sequoia and Acacia) was \$479 million. In addition, as of December 31, 2008, we had an allowance for loan losses (GAAP) of \$38 million for our consolidated residential and commercial loans. As we have no credit reserves or allowances for tax, any future credit losses on securities or loans would have a more significant impact on tax earnings than on GAAP earnings and may create significant taxable income volatility to the extent the level of credit losses fluctuates during reporting periods.

Income Recognition on Interest-Only Securities (IOs) at Sequoia

As part of our investment in Sequoia securitization entities, we often retain interest-only (IOs) securities at the time they are issued. Our current tax basis in these securities is \$39 million. The return on IO securities is sensitive to prepayments. Typically, fast prepayments reduce yields and slow prepayments increase yields. We are not permitted to recognize a negative yield under tax accounting rules so, during periods of fast prepayments, our periodic premium expense can be relatively low and the cost basis for these securities may not be significantly reduced. In periods prior to 2008, we did experience fast prepayments on these loans. During 2008, the prepayments have been slowing, although we are still not amortizing the loans as quickly as we might otherwise do so under GAAP. Should prepayments remain slow, we would expect the resulting tax basis to more closely reflect the actual market values of these IOs over time. Many of our Sequoia securitizations are callable or will become callable over the next two years, although we do not currently anticipate calling any Sequoia securitizations in 2009 or 2010. If we do call a Sequoia, the remaining tax basis in the IOs is written off creating an ordinary loss at the call date.

Compensation Expense at Redwood

The total tax expense for equity award compensation is dependent upon varying factors such as the timing of payments of dividend equivalent rights, the exercise of stock options, the distribution of deferred stock units, and the deferrals to and withdrawals from our Executive Deferred Compensation Plan. For GAAP, the total expense associated with an equity award is determined at the award date and is generally recognized over the vesting period.

For tax, the total expense is recognized at the date of distribution or exercise and not the award date. The amount of compensation expense could therefore be significantly different for tax than for GAAP in addition to the differences in timing.

FINANCIAL CONDITION, LIQUIDITY, AND CAPITAL RESOURCES

Management's Supplemental Analysis

The consolidating balance sheet presents our financial condition at Redwood, including our investments in the Fund, Sequoia, and Acacia entities. We consolidate these entities for GAAP reporting purposes; they are not separate business segments. The following presentation highlights the impact from the consolidation of those entities on our overall financial condition. A discussion of significant balance sheet accounts is provided in the section that follows.

At December 31, 2008, our stockholders' equity totaled \$302 million, and we had unrestricted cash of \$126 million and no short-term debt.

Residential Real Estate Loans at Sequoia and Redwood

We did not acquire any residential real estate loans during 2008. We may resume acquiring residential real estate loans on a bulk or flow basis from originators once the economics for securitization improve. Prior to 2006, our loan purchases were predominately comprised of short reset LIBOR-indexed ARMs. In 2006 and 2007, we expanded our acquisitions to include hybrid loans (loans with a fixed-rate coupon for a period of two to ten years before becoming adjustable).

69

TABLE OF CONTENTS

The following table provides details of our residential real estate loans activity for 2008 and 2007. Loans are predominantly owned at Sequoia securitization entities and our reported activity is predominantly associated with those loans. The residential loans held at Redwood totaled \$3 million at December 31, 2008.

Table 42 Residential Real Estate Loans at Sequoia and Redwood Activity

(In Millions)	Year Ended December 31,	
	2008	2007

Prime securities are residential mortgage-backed securities backed by high credit quality loans. Many of these loans are jumbo loans, with loan balances greater than existing conforming loan limits. Prime securities typically have relatively high weighted average FICO scores (700 or higher), low weighted average loan-to-value ratios (75% LTV or less), and limited concentrations of investor properties.

Non-prime securities are residential mortgage-backed securities that are not backed by high credit quality loans. Most of the borrowers backing non-prime loans have lower FICO scores or impaired credit histories, but exhibit the ability to repay the loan. To compensate for the greater risks and higher costs to service non-prime loans, borrowers often pay higher interest rates, and possibly higher origination fees. We use loss assumptions that are significantly higher when acquiring securities backed by non-prime loans than we use when acquiring securities backed by prime loans.

72

(1) Certain categories have market values of less than one million and significant face values. For example, non-prime Resi-CES from the 2006 vintage is carried at only \$106 thousand, yet has a face value of \$47 million.

73

TABLE OF CONTENTS

Investment-Grade Securities at Redwood

IGS have credit ratings that are investment-grade but may have both the upside opportunities and downside risks that are assumed with concentrated credit investments. As a result, we have recently been able to acquire these securities at a significant discount to their face (principal) value. At December 31, 2008, all IGS owned at Redwood were backed

by prime and non-prime residential loans.

The following table presents the components of carrying value (which equals fair value) at December 31, 2008 and 2007, for residential IGS.

Table 46 Residential IGS at Redwood

December 31, 2008 (In Millions)	Residential	
	Prime	Non-prime

Amortized cost	1	11
Gross unrealized market value gains		
Gross unrealized market value losses		
Carrying Value	\$ 1	\$ 11
Carrying value as a percentage of face	100 %	44 %

Our residential IGS portfolio totaled \$115 million at December 31, 2008, an increase from \$12 million at December 31, 2007. This increase was the result of net acquisitions of \$222 million, partially offset by decreases in the fair values and paydowns of these securities. Of the \$222 million of IGS acquired in 2008, 67% were prime securities and 33% were non-prime securities.

74

TABLE OF CONTENTS**Residential CES**

Our residential CES had a fair value of \$30 million at December 31, 2008, a decrease of \$133 million from \$163 million at December 31, 2007. The primary reason for this decline was negative mark-to-market adjustments on these securities during 2008.

The following table details our residential CES portfolios by the product type and collateral vintage at December 31, 2008 and 2007.

Table 49 Residential CES at Redwood Product and Vintage

Total Residential CES	\$ 78	\$ 34	\$ 25	\$ 26	\$ 163

The loans underlying all of our residential CES totaled \$128 billion at December 31, 2008, and consist of \$99 billion prime and \$29 billion non-prime. These loans are located nationwide with a large concentration in California (48%). During 2008, realized residential credit losses were \$279 million of principal value, a rate that equals 87 basis points (0.87%) of current loan balances on an annualized basis. Serious delinquencies (90+ days, in foreclosure or REO) at December 31, 2008 were 5.25% of current balances. These delinquencies were 1.70% of current balances for loans in prime pools and 17.06% of current balances for loans in non-prime pools.

77

TABLE OF CONTENTS

Commercial CES at Redwood

Our commercial CES totaled \$42 million at December 31, 2008, as compared to \$149 million at December 31, 2007, a decline of \$107 million. This decline was primarily due to declines in the fair values of securities, as there were no acquisitions or sales of commercial CES during 2008. We may acquire commercial securities in the future if pricing for these securities becomes attractive to us relative to the risks taken.

At December 31, 2008, commercial CES provided credit enhancement on \$49 billion of underlying loans on office, retail, multifamily, industrial, and other income-producing properties nationwide. Of our total commercial CES, \$34 million were non-rated, \$5 million were B-rated, and \$3 million were BB-rated. Seriously delinquent loans underlying commercial CES were \$562 million at December 31, 2008, an increase of \$379 million from December 31, 2007. Many of the delinquencies are concentrated within a few securities for which we have increased our credit reserves and impaired through our income statement. We consider our credit reserve of \$497 million to be adequate as of December 31, 2008.

Securities at the Fund

We acquired \$73 million of assets for the Fund during 2008, bringing the total capital deployed to \$96 million. The Fund became fully invested in the third quarter of 2008. The fair value of securities held at the Fund was \$48 million at December 31, 2008, which includes \$16 million of unrealized losses due to declining fair values of securities. We recognized \$15 million of other-than-temporary impairments on these securities in 2008. The following table provides information on the activity at the Fund for 2008.

In addition to the \$334 million of real estate securities included in the table above, Acacia owned \$74 million of ABS issued by Sequoia, \$78 million in non-real estate securities, and \$9 million in commercial loans at December 31, 2008.

The following table presents the carrying value (which equals fair value) as a percent of face value at December 31, 2008 for securities owned by Acacia entities. In the aggregate, the fair value of these securities is 10% of face value.

TABLE OF CONTENTS**Derivative Financial Instruments**

We enter into interest rate agreements to manage some of our interest rate risks. We hold these agreements with highly rated counterparties and maintain certain risk management policies limiting our exposure concentrations to any counterparty. At December 31, 2008, Redwood was party to interest rate agreements with an aggregate notional value of \$264 million and a net fair value of negative \$4 million. At December 31, 2008 the Acacia entities were party to interest rate agreements with an aggregate notional value of \$1.7 billion and a net negative fair value of \$93 million.

These are all accounted for as trading instruments and all changes in value and any net payments and receipts are recognized through our consolidated statements of (loss) income through market valuation adjustments, net.

One Acacia entity entered into credit default swaps (CDS) in the first quarter of 2007. At December 31, 2008, these CDS had a \$78 million notional balance and a fair value of negative \$78 million. At December 31, 2007, these CDS had a notional balance of \$79 million and a fair value of negative \$57 million. The decrease in fair value on CDS is included in market valuation adjustments, net, in our consolidated statements of (loss) income.

Asset-Backed Securities Issued Sequoia and Acacia

Through our sponsored securitization entities, we have securitized the majority of the assets shown on our consolidated balance sheets. These entities acquire assets and issue asset-backed securities (ABS) in order to fund these acquisitions. The residential whole loan securitization entities we sponsor are called Sequoia and the CDO securitization entities we sponsor are called Acacia. These securitization entities are bankruptcy-remote from us, so that our liabilities cannot become liabilities of the securitization entities, and the ABS issued by the securitization entities cannot become obligations of ours. Nevertheless, GAAP requires us to consolidate the assets and liabilities from Sequoia and Acacia entities for financial statement reporting purposes.

82

TABLE OF CONTENTS

At December 31, 2008, there was \$4.6 billion of loans owned by Sequoia securitization entities and reported at cost, which were funded with \$4.5 billion of Sequoia ABS issued that were also reported at cost. At December 31, 2008, there was \$334 million of securities owned by Acacia securitization entities and reported at fair value, which were funded with \$347 million of Acacia ABS issued that were also reported at fair value. In total, the assets of these two programs represent 95% of our total earning assets and the liabilities (ABS issued) of these programs represent 98% of our total consolidated liabilities.

The following table provides detail on the activity for asset-backed securities for 2008 and 2007.

Table 54 ABS Issued Activity Sequoia and Acacia

	Year Ended December 31, 2008

Sequoia ABS interest only issued	35,220				(11,688)			23,532
Total Sequoia ABS Issued	6,946,166		(1,156,182)	(1,264,073)	(16,858)		(926)	4,508,127
Acacia ABS Issued	3,383,113	(1,489,672)	(249,645)			(1,296,865)		346,931
Total ABS Issued	\$10,329,279	\$(1,489,672)	\$(1,405,827)	\$(1,264,073)	\$(16,858)	\$(1,296,865)	\$(926)	\$4,855,058

Long-term Debt

In 2006, we issued \$100 million of long-term debt in the form trust preferred securities through Redwood Capital Trust I, a wholly-owned Delaware statutory trust, in a private placement transaction. These trust preferred securities require quarterly distributions at a floating rate equal to three-month LIBOR plus 2.25% until the notes are redeemed in whole, which will be no later than January 30, 2037. The earliest optional redemption date without a penalty is January 30, 2012.

In 2007, we issued \$50 million of long-term debt in the form of subordinated notes, which require quarterly distributions at a floating rate equal to three-month LIBOR plus 2.25% until the notes are redeemed, no later than July 30, 2037. The earliest optional redemption date without penalty is July 30, 2012.

Contractual Obligations and Commitments

The following table presents our contractual obligations and commitments as of December 31, 2008, as well as the obligations of the securitization entities that we sponsor and consolidate for financial reporting purposes.

Table 55 Contractual Obligations and Commitments as of December 31, 2008

(In Millions)	Payments Due or Commitment Expiration by Period				
	Total	Less Than 1 Year	1 to 3 Years	3 to 5 Years	After 5 Years
Redwood Obligations:					
Short-term debt	\$	\$	\$	\$	\$
Long-term debt	150				150
Anticipated interest payments on long-term debt	216	6	13	15	182
Accrued interest payable	1	1			
Operating leases	14	2	4	3	5
Purchase commitments					
Total Redwood Obligations and Commitments	\$381	\$ 9	\$ 17	\$ 18	\$ 337
Obligations of Securitization Entities:					
Consolidated ABS ⁽¹⁾	\$7,620	\$	\$	\$	\$ 7,620
Anticipated interest payments on ABS ⁽²⁾	4,859	293	495	599	3,472
Accrued interest payable	28	28			
Total obligations of securitization entities	\$12,507	\$ 321	\$ 495	\$ 599	\$ 11,092
Total Consolidated Obligations and Commitments	\$12,888	\$ 330	\$ 512	\$ 617	\$ 11,429

(1) All consolidated ABS issued are collateralized by real estate loans and securities. Although the stated maturity is as shown, the ABS obligations will pay down as the principal of these real estate loans or securities pay down. The amount shown is the face value of the ABS issued and not necessarily the value reported in our consolidated financial statements.

(2) The anticipated interest payments on consolidated ABS issued is calculated based on the contractual maturity of the ABS and therefore assumes no prepayments of the principal outstanding as of December 31, 2008.

84

TABLE OF CONTENTS

Accumulated Other Comprehensive (Loss) Income, 2008 vs. 2007

The following table provides cumulative balances of unrealized gains and losses and carrying value by the type and credit rating of real estate securities at December 31, 2008 and 2007. It also reflects the change in balances of cumulative unrealized (loss) gains during 2008.

Table 56 Cumulative Other Comprehensive (Loss) Income Real Estate Securities

On January 1, 2008, we elected to adopt the fair value option under FAS 159 for the assets and liabilities of Acacia entities and certain other assets at Redwood. The effect of this election was a reclassification of \$458 million from

accumulated other comprehensive income to retained earnings. This one-time adjustment had no impact on our reported earnings. Subsequent changes to the values of FAS 159 assets and liabilities flow through our consolidated statements of (loss) income.

85

TABLE OF CONTENTS

Accumulated Other Comprehensive (Loss) Income, 2007 vs. 2006

In 2007, most of our real estate securities were accounted for as AFS and were reported on our consolidated balance sheets at fair value. Many of our derivative instruments were accounted for as cash flow hedges and were also reported on our consolidated balance sheets at fair value. The differences between the value of these assets and our amortized cost were shown as a component of stockholders' (deficit) equity as accumulated other comprehensive (loss) income. Periodic changes in the fair value of these assets relative to their amortized cost are included in other comprehensive (loss) income.

As a result of the price declines on real estate securities that occurred during 2007, the fair value adjustments recorded on our consolidated balance sheet related to AFS securities was negative \$628 million. Additionally, the market valuation adjustment recorded to our balance sheet for interest rate agreements was negative \$40 million at December 31, 2007. The table below details the carrying values and unrealized gains or losses on AFS securities at December 31, 2007 and 2006.

Table 57 Cumulative Other Comprehensive (Loss) Income Real Estate Securities

(In Thousands)	Cumulative Unrealized (Loss) Gain		Change in (Loss) Gain Year Ended December 31, 2007	Carrying Value	
	December 31, 2007	December 31, 2006		December 31, 2007	December 31, 2006

86

TABLE OF CONTENTS

Market Risks

We seek to manage the risks inherent in our business including but not limited to credit risk, interest rate risk, prepayment risk, liquidity risk, and fair value risk in a prudent manner designed to enhance our earnings and dividends and preserve our capital. In general, we seek to assume risks that can be quantified from historical experience, to actively manage such risks, and to maintain capital levels consistent with these risks.

Credit Risk

Integral to our core business is assuming the credit risk of real estate loans primarily through the ownership of residential and commercial real estate loans and securities. Some of our capital base is employed in owning credit enhancement securities that have below investment-grade credit ratings due to their concentrated credit risks with respect to underlying real estate loans and investment-grade securities. We believe that many of the loans underlying these securities are above-average in credit quality as compared to U.S. real estate loans in general, but the balance and percentage of loans with special risk factors (higher risk commercial loans, interest-only and negative amortization residential loan types, and Alt-A and subprime residential loans) has increased and continues to increase. We may also own residential real estate loans that are not securitized.

Credit losses from the loans in securitized loan pools, in general, first reduce the principal value of and economic returns on the lower-rated securities in these pools. Credit losses on real estate loans can occur for many reasons, including: poor origination practices; fraud; faulty appraisals; documentation errors; poor underwriting; legal errors; poor servicing practices; weak economic conditions; decline in the value of homes, businesses, or commercial properties; special hazards; earthquakes and other natural events; over-leveraging of the borrower or on the property; reduction in market rents and occupancies and poor property management practices; changes in legal protections for lenders; reduction in personal incomes; job loss; and personal events such as divorce or health problems. In addition, if the U.S. economy or the housing market weakens further than we have anticipated, our credit losses could increase beyond levels that we have anticipated. Credit losses on real estate loans can vary for reasons not related to the general economy.

With respect to most of the loans securitized by securitization entities sponsored by us and for a portion of the loans underlying residential loan securities we have acquired from securitizations sponsored by others, the interest rate is adjustable. Accordingly, when short-term interest rates rise, required monthly payments from homeowners may rise under the terms of these loans, and this may increase borrowers' delinquencies and defaults.

We also acquire securities backed by negative amortization adjustable-rate loans made to residential borrowers, some of which are prime-quality loans while many are Alt-A quality loans (and a few are subprime loans). We invest in these riskier loan types with the expectation of significantly higher delinquencies and losses as compared to regular amortization loans, but believe these securities offer us the opportunity to generate attractive risk-adjusted returns as a result of attractive pricing and the manner in which these securitizations are structured. Nevertheless, there remains substantial uncertainty about the future performance of these assets.

The large majority of the commercial loans we credit-enhance are fixed-rate loans, some of which are interest-only loans. In general, these loans are not fully amortizing and therefore require balloon payments at maturity. Consequently, we could be exposed to credit losses at the maturity of these loans if the borrower is unable to repay or refinance the borrowing with another third party lender.

We will experience credit losses on residential and commercial loans and securities, and to the extent the losses are consistent with the amount and timing of our assumptions, we expect to earn attractive returns on our investments. We

manage our credit risks by understanding the extent of the risk we are taking and insuring the appropriate underwriting criteria are met, and we utilize systems and staff to continually monitor the ongoing credit performance of each loan and security. To the extent we find the credit risks on specific assets are changing adversely, we will take actions (including selling the assets) to mitigate potential losses. However, we may not always be successful in foreseeing adverse changes in credit performance or in effectively mitigating future credit losses.

87

TABLE OF CONTENTS

In addition to residential and commercial CES, Redwood, the Fund, and Acacia own investment-grade and other securities issued by securitization entities that are sponsored by others. These securities are rated AAA through BBB-, and are typically in a third-loss or better position or are otherwise effectively more senior in the credit structure in comparison to first-loss CES or their equivalent. A risk we face with respect to these securities is that we do not generally control or influence the underwriting, servicing, management, or loss mitigation with respect to these underlying loans.

The Acacia entities, the Fund, and Redwood also own securities backed by subprime and Alt-A residential loans that have substantially higher credit risk characteristics than prime-quality loans. Consequently, we can expect these lower-quality loans to have higher rates of delinquency and loss, and if such losses differ from our assumptions, Acacia, the Fund, and Redwood could suffer losses.

The Acacia entities also own certain IGS and CES loan securities purchased from the Sequoia securitization entities we sponsor. These securities are generally less likely to suffer credit losses than other securities since credit losses ordinarily would not occur until cumulative credit losses within the pool of securitized loans exceed the principal value of the subordinated CES underneath and other credit protections have been exhausted. However, if the pools of residential and commercial loans underlying these securities were to experience poor credit results, these securities could have their credit ratings downgraded, could suffer decreases in fair value, or could experience principal losses. If any of these events occurs, it would likely reduce our returns from these investments.

Interest Rate Risk

Interest rates and the shape of the yield curve can affect the cash flows and fair values of our assets, liabilities, and interest rate agreements, and consequently, affect our earnings and reported equity. Our general strategy with respect to interest rates is to maintain an asset/liability posture (including hedges) on a consolidated basis that assumes some interest rate risks but not to such a degree that the achievement of our long-term goals would likely be affected by changes in interest rates. Accordingly, we are willing to accept short-term volatility of earnings and changes in our reported equity in order to accomplish our goal of achieving attractive long-term returns.

To implement our interest rate risk strategy, we may use interest rate agreements in an effort to maintain a close match between pledged assets and debt, as well as between the interest rate characteristics of the assets in the securitization entities and the corresponding ABS issued. However, we generally do not attempt to completely hedge changes in interest rates, and at times, we may be subject to more interest rate risk than we generally desire in the long term. Changes in interest rates will have an impact on the values and cash flows of our assets and corresponding liabilities.

Prepayment Risk

We seek to maintain an asset/liability posture that benefits from investments in prepayment-sensitive assets while limiting the risk of adverse prepayment fluctuations to an amount that, in most circumstances, can be absorbed by our capital base while still allowing us to make regular dividend payments.

Prepayments affect GAAP earnings in the near-term primarily through the timing of the amortization of purchase premium and discount and through triggering market valuation adjustments. For example, amortization income from discount assets may not necessarily offset amortization expense from premium assets, and vice-versa. In addition, variations in current and projected prepayment rates for individual assets and changes in interest rates (as they affect projected coupons on ARMs and other assets and thus change effective yield calculations) may cause net premium amortization expense or net discount amortization income to vary substantially from quarter to quarter. Moreover, the timing of premium amortization on assets may not always match the timing of the premium amortization on liabilities even when the underlying assets and liabilities are in the same securitization and pay down at the same rate.

Prepayment risks exist in the assets and associated liabilities consolidated on our balance sheets. In general, discount securities benefit from faster prepayment rates on the underlying real estate loans while premium securities (such as IOs) benefit from slower prepayments on the underlying loans. We are currently

88

TABLE OF CONTENTS

biased in favor of faster prepayment speeds with respect to the long-term economic effect of residential loan prepayments. However, in the short-term, increases in residential loan prepayment rates could result in GAAP earnings volatility.

With respect to securities backed by residential mortgage loans (and in particular, IOs), changes in prepayment forecasts by market participants could affect the market prices of those securities sold by securitization entities, and thus could affect the profits we earn from securitizing assets.

Our credit results and risks can also be affected by prepayments. For example, credit risks for the securities we own are reduced each time a loan prepays. All other factors being equal, faster prepayment rates should reduce our credit risks on our existing portfolio.

We caution that prepayment rates are difficult to predict or anticipate, and variations in prepayment rates can materially affect our earnings and dividends. ARM prepayment rates, for example, are driven by many factors, one of which is the steepness of the yield curve. As the yield curve flattens (short-term interest rates rise relative to longer-term interest rates), ARM prepayments typically increase.

Fair Value and Liquidity Risks

The securities that we sponsor are generally funded with equity with no associated recourse debt that might affect our liquidity position. On January 1, 2008 we elected the fair value option under FAS 159 for assets and liabilities at Acacia, with all changes in market values now being recorded through our income statement. Though this adds to our potential earnings volatility, the securities and ABS issued by Acacia entities have no recourse to us that would otherwise affect our liquidity position. Changes in the fair values (or ratings downgrades) of assets owned by an Acacia entity may also create differences between our reported GAAP and taxable income. However, we do not currently believe this will create liquidity issues for us.

Most of the real estate loans that we consolidate are accounted for as held-for-investment and reported at amortized cost. Most of these loans have been sold to Sequoia entities and, thus, changes in the fair value of the loans do not have an impact on our liquidity. However, changes in fair values during the accumulation period (while these loans are funded with short-term Redwood debt before they are sold to a Sequoia entity) may have a short-term effect on our liquidity. We may also own some real estate loans accounted for as held-for-sale and adverse changes in their value would be recognized through our income statement and may have an impact on our ability to obtain financing for

them.

Our consolidated obligations consist primarily of ABS issued. Changes in fair value of ABS issued generally have no impact on our liquidity. ABS issued by Sequoia are reported at amortized cost as our the residential loans collateralizing these ABS. Beginning January 1, 2008, we report at fair value the ABS issued by Acacia and also report the underlying securities collateralizing the ABS issued at fair value. In either case, the resulting net equity (assets less liabilities) may not necessarily be reflective of the fair value of our interests in these securitization entities. However, since the ABS issued can only look to the cash flows generated by the assets within that securitization for payments of interest and repayments of the face value of the ABS, the changes in fair value do not have an effect on Redwood. Only to the extent that changes in fair values affect the timing of the cash flows we might receive on our investments in the Acacia entities, is there an effect to Redwood from changes in fair values of these securities. There are no such considerations in the Sequoia securitization entities.

We may fund some assets with a combination of short-term debt and equity (generally prior to securitization) that is recourse to Redwood. This generally increases our fair value and liquidity risks. We manage these risks by maintaining what we believe to be conservative capital levels under our internal risk-adjusted capital and risk management policies and by ensuring we have a variety of financing facilities available to fund each of our assets.

Inflation Risk

Virtually all of our consolidated assets and liabilities are financial in nature. As a result, changes in interest rates and other factors drive our performance far more than does inflation. Changes in interest rates do not necessarily correlate with inflation rates or changes in inflation rates.

89

TABLE OF CONTENTS

Our financial statements are prepared in accordance with GAAP. Our activities and balance sheets are measured with reference to historical cost or fair value without considering inflation.

Effect of Governmental Initiatives on Market Risks

Recent market and economic conditions have been unprecedented and challenging, with tighter credit conditions and slower growth through the end of 2008. Continued concerns about the systemic impact of inflation or deflation, energy costs, geopolitical issues, the availability and cost of credit, the U.S. mortgage market, and the declining real estate market in the U.S. have contributed to increased market volatility and diminished expectations for the U.S. economy. These market and economic conditions have spurred governmental initiatives and interventions designed to address them; however, the effect these governmental actions will have is not yet fully known.

For example, in February 2009 the President announced a Homeowner Affordability and Stability Plan, which is primarily focused on reducing foreclosures through loan modifications, and increasing refinancing opportunities for homeowners with mortgages that conform to governmental agency criteria. Details of the plan will be released in March 2009, but it appears that the administration will be taking parts of many existing loan modification plans and formalizing them. This plan is in addition to the U.S. government's TARP program, and other recent governmental interventions in the U.S. credit markets.

Given the size and scope of these governmental actions, they will likely affect many of the market risks described above. As these initiatives are developed and their effects become more apparent we will continue to seek to take them into account in managing the risks inherent in our business.

Critical Accounting Policies

The preparation of financial statements in conformity with GAAP requires us to make estimates and assumptions that affect the reported amounts of assets and liabilities at the date of the consolidated financial statements and the reported amounts of revenues and expenses during the reported period. Actual results could differ from those estimates. The critical accounting policies and the possible effect of changes in estimates on our financial results and statements are discussed below. Management discusses the ongoing development and selection of these critical accounting policies with the audit committee of the board of directors.

Revenue Recognition

When recognizing revenue on consolidated earning assets, we generally employ the effective yield method and use assumptions about the future to determine an effective yield that drives amortization of premiums, discounts, and other net capitalized fees and costs associated with purchasing and financing real estate loans and securities.

Loan Premium Amortization

For consolidated real estate loans, the effective yield method is applied as prescribed under FAS 91. For loans acquired prior to July 2004, we use coupon interest rates as they change over time and anticipated principal payments to determine an effective yield to amortize premiums or discounts. When rates rise, our premium expense will likely be lower (as we project the effective yields to be higher and, until the coupons reset higher, we need to amortize less of the premium to record the effective yield in each reporting period). Conversely, when rates fall, our premium expense will likely be higher (as we project the effective yields to be lower and, until the coupons reset lower, we need to amortize less of the premium to record the effective yield in each reporting period).

For loans acquired after July 1, 2004, we use the initial coupon interest rate of the loans (without regard to future changes in the underlying indices) and anticipated principal payments on a pool basis to calculate an effective yield and to amortize the premium or discount. The volatility in periodic amortization expense is dependent primarily on prepayments.

Securities Discount Amortization

For discount amortization on our consolidated securities, an effective yield is applied by projecting cash flows that incorporate assumptions of amount and timing credit losses, prepayment speeds, and interest rates over the remaining life of each asset. If our assumptions prove to be accurate, then the yield that we recognize

90

TABLE OF CONTENTS

in the current period will remain the same over the life of the security. We constantly review and update as necessary our assumptions and resulting cash flow projections based on historical performance, input, and analyses received from external sources, internal models, and our own judgment and experience. There can be no assurance that our assumptions used to generate future cash flows will prove to be accurate or that these estimates will not change materially.

The majority of our discount amortization is generated from residential and commercial securities purchased at a significant discount to par value. To the extent we expect to incur credit losses, we set aside as a form of credit reserve a portion of this discount and this designated credit reserve is not amortized into income. The level of this reserve is

based upon our assessment of various factors including economic conditions, characteristics and delinquency status of the underlying loans, past performance of similar loans, and other factors. Thus, when credit losses do occur, they are recorded against this reserve and there is no income statement impact at that time. The difference between the amount of our total discount and the designated credit reserve is the accretable discount. The accretable discount represents the amount of discount amortization that we expect to recognize into income over the remaining life of an asset. As we update our estimate of future credit losses, increases in projected losses will increase the discount set aside as reserve resulting in less accretable discount for amortization into income and lower portfolio yields. In contrast, lower credit loss projections will decrease the reserve and increase the accretable discount balance, increasing our CES discount amortization and resulting in higher portfolio yields.

The timing of projected receipt of cash flows from our CES is also an important driver in the effective yield. Slower actual or projected prepayment speeds will cause projected receipt of cash flows to be delayed and will reduce the rate of CES discount accretion resulting in a lower yield for the portfolio. An increase in actual or projected prepayment speeds will generally result in a higher portfolio yield as a result of increased discount amortization.

Amortization of ABS Issued Premium

We apply the effective yield method in determining amortization for the premium and deferred asset-backed securities issuance cost for ABS issued. ABS premium is recognized through our income statement as a reduction in interest expense and issuance costs are amortized as additional interest expense over the life of the ABS issued. Similar to our calculation of amortization of premium and discounts on assets, the use of this method requires us to project cash flows over the remaining life of each liability. These projections are primarily affected by forecasted prepayment rates of the pledged assets. If prepayment speeds are faster than modeled, the average life of the liability will shorten, and we will recognize the ABS net premium and deferred asset-backed securities issuance costs at a faster rate, thereby decreasing net expense in the current period. If prepayment speeds are slower than expected, the average life of the liability will lengthen, and it will take us longer to recognize the ABS net premium, decreasing interest expense in the current period.

Establishing Valuations and Accounting for Changes in Valuations

The fair values we report for our financial assets and liabilities reflect what we believe we would realize if we chose to sell our assets, or would have to pay if we chose to buy back our ABS issued liabilities. This is consistent with GAAP requirements even though we may have no intent on selling these assets, nor would we be forced to sell since we currently have no recourse debt funding these securities, and we generally do not intend to repurchase our liabilities. Establishing fair values in thinly traded or essentially closed markets is inherently subjective and is dependent upon many market-based inputs, including observable trades, information on offered inventories, bid lists, and indications of value obtained from dealers. Obtaining fair values for securities is especially difficult for more illiquid securities, such as ours, and is made more difficult when there is limited trading visibility, as has been the case in recent quarters. Where there are observable sales, many of them are from distressed sellers, and their sales tend to further depress asset prices. For these reasons, we expect market valuations to continue to be highly volatile.

Fair values for our assets and liabilities are dependent upon a number of market-based assumptions including future interest rates, prepayment rates, discount rates, credit loss rates, and the timing of credit losses. We use these assumptions to generate cash flow estimates and internal values for each individual security. Our valuation process relied on our internal values to estimate the fair values of our securities at

December 31, 2008. We also request indications of value (marks) from third-party dealers every quarter to assist in the valuation process for all of our assets and liabilities. For December 31, 2008, we received dealer marks on 67% of our assets and 94% of our liabilities on our consolidated balance sheet. In the aggregate, our internal valuations of the securities on which we received dealer marks were 1% lower than the aggregate dealer marks at December 31, 2008. Our internal valuations of our ABS issued on which we received dealer marks were 12% higher than the aggregate dealer marks at December 31, 2008.

In assessing the third-party dealer marks that we receive, it appears that some measures have been taken to enhance the quality of these marks, as they more closely approximated our internal fair value estimates in the fourth quarter of 2008 than in recent prior quarters. However, there were fewer third-party generated data points available to us at December 31, 2008, than in prior quarters, in part because some dealers no longer exist and others have ceased providing client valuation services.

Accounting under FAS 159

Effective January 1, 2008 we adopted SFAS No. 159, *The Fair Value Option for Financial Assets and Financial Liabilities* (FAS 159). This gives us the option to elect to measure eligible financial assets, financial liabilities, and firm commitments at fair value, on an instrument-by-instrument basis, that are otherwise not permitted to be accounted for at fair value under other accounting standards. One of the chief objectives of this standard was to provide better matching of the accounting results to the economic activities underlying them. For example, there may be assets or liabilities that are measured under the historical cost models while related transactions (e.g. hedging derivatives or offsetting transactions) are at fair value. The election to use the fair value option is available when an entity first recognizes a financial asset or financial liability or upon entering into a firm commitment. Subsequent changes in fair value are recorded in earnings.

We elected the fair value option on January 1, 2008, for the assets and liabilities of Acacia and certain other securities. FAS 159 allowed for a one-time election for these existing positions upon adoption, which resulted in a \$1.5 billion cumulative effect transition adjustment recorded to beginning retained earnings on January 1, 2008. Our decision to adopt FAS 159 for new financial instruments is generally based upon our funding strategy for the specific financial asset acquired. For example, securities that we anticipate funding with equity will generally be accounted for as AFS securities under FAS 115. Securities that we anticipate funding with a combination of debt and equity or are or may be financed through securitization liabilities will generally be accounted for at fair value under FAS 159 along with the corresponding liabilities.

Mark-to-Market Adjustments

The rules regarding MTM accounting are complex and may not clearly reflect the underlying economics. This accounting and economic discussion is intended to provide investors with a better understanding of the impact of MTM adjustments on our reported financial results.

All changes in fair value for securities or derivatives accounted for as trading instruments or under the fair value option of FAS 159 flow through the income statement. These adjustments can be either positive or negative from period to period. Positive changes in the fair value of AFS securities from period to period are accounted for as increases to stockholders' equity and do not flow through our income statement. Accounting for negative changes in the fair value of AFS securities from period to period requires a three-step process involving a combination of quantitative and judgmental evaluations. The diagram and discussion that follows details the three-step process for evaluating impairments on AFS securities.

AFS securities are deemed impaired if the fair value is below amortized cost. An assessment is then required as to whether the impairment is temporary and is reflected as unrealized losses in the balance sheet, or is other-than-temporary (OTT) and realized through the income statement as market valuation adjustments.

The first step in this assessment is to determine whether there has been an adverse change in the underlying cash flows generated by the security. It is difficult to separate with precision how much of the change in fair value is driven by changes in expected cash flows versus changes in market discount rates, but during periods of market illiquidity and uncertainty (as we have encountered since late 2007), the market discount rate impact can be significant. The third step is to determine whether we have the ability and intention to hold the security. The third step requires us to evaluate whether an impaired security will recover in value within a reasonable period of time. This step is very subjective, particularly when there is turmoil and uncertainty in the capital markets.

If, based on our assessment, we have an other-than-temporary impairment, then the basis of the security is written down to its fair value through our income statement. Market valuation adjustments of this type could be substantial, reducing GAAP income and causing a loss. However, for securitized assets, reductions in fair values may not affect our cash flows or investment returns at all, or may not affect them to the degree implied by the accounting write-down.

A security can be considered OTT impaired even if the change in projected cash flows is small relative to the resulting MTM adjustment. So while OTT impaired securities cannot be written back up through MTM adjustments in our income statement, this does not mean the underlying security could not recover in value. If the cash flows generated by the security perform better than the decline in fair value might indicate, we could recognize this benefit through higher interest yields over time.

Allowance for Loan Losses on Loans Held-for-Investment

For consolidated real estate loans held-for-investment, we establish and maintain credit reserves that we believe represent probable credit losses that will result from intrinsic losses existing in our pool of consolidated real estate loans held-for-investment as of the date of the financial statements. The reserves for credit losses are adjusted by taking provisions for credit losses recorded as a reduction in interest income on real estate loans on our consolidated statements of (loss) income. The reserves consist of estimates of specific loan impairment and estimates of collective losses on pools of loans with similar characteristics.

93

TABLE OF CONTENTS

To calculate the reserve for credit losses for real estate loans, we determine intrinsic losses by applying loss factors (default, the timing of defaults, and the loss severity upon default) that can be specifically applied to each pool of loans and estimate expected losses of each pool over their expected lives. Once we determine the loss factors, we then estimate the timing of these losses and the losses probable to occur over an effective loss confirmation period. This period is defined as the range of time between the probable occurrence of a credit loss (such as the initial deterioration of the borrower's financial condition) and the confirmation of that loss (the actual charge-off of the loan). The losses expected to occur within the estimated loss confirmation period are the basis of our credit reserves because we believe those losses exist as of the reported date of the financial statements.

We do not maintain a loan repurchase reserve, as any risk of loss due to loan repurchases (i.e., due to breach of representations) would normally be covered by recourse to the companies from whom we acquired the loans.

Accounting for Derivative Instruments

We use derivative instruments to manage certain risks such as interest rate risk. We may also acquire derivative financial instruments as investments. Derivative instruments are reported on our consolidated balance sheets at their fair value. If a derivative instrument has a positive fair value, it is reported as an asset. If the fair value is negative, the instrument is reported as a liability.

Changes in fair values of derivative instruments are reported either through the income statement or through our equity. For derivatives accounted for as trading instruments, all changes in the fair values are recognized through the income statement. For interest rate agreements (a type of derivative) accounted for as a cash flow hedge, most of the changes in fair values are recorded in our balance sheet through equity. Only the ineffective portions (as determined according to the accounting principle) of the derivatives accounted for as cash flow hedges are included in income.

Using derivatives may increase our earnings volatility, as the accounting results for derivatives may not match the accounting results for the hedged asset or liability due to our inability to, or decision not to, meet the requirements for certain accounting treatments, or if the derivatives do not perform as intended.

ITEM 7A. QUANTITATIVE AND QUALITATIVE DISCLOSURES ABOUT MARKET RISK

We provide a discussion about market risks in Item 7 of this Annual Report on Form 10-K. To supplement these discussions, the table below incorporates information that may be useful in analyzing certain market value risks on our consolidated balance sheets. This table presents just one scenario regarding potential future principal prepayments and interest rates of our assets and liabilities, based on certain underlying assumptions. There can be no assurance that assumed events will occur as anticipated. Future sales, principal repayments, acquisitions, calls, and restructuring could materially change our interest rate risk profile.

For our interest-rate sensitive assets and liabilities, the table presents principal cash flows and related average interest rates by year of repayment. The forward curve (future interest rates as implied by the yield structure of debt markets) as of December 31, 2008 was used to project the average coupon rates for each year presented, based on the characteristics of our existing portfolio. The timing of principal cash flows includes assumptions on the prepayment speeds of assets based on their recent prepayment performance and future prepayment performance consistent with the interest rate scenario. Actual prepayment speeds will likely vary from these assumptions. Furthermore, this table does not include anticipated credit losses and assumes all of the principal we are entitled to receive will be received. As discussed in Item 7 of this Annual Report on Form 10-K, the actual amount and timing of credit losses will affect the principal payments and effective rates during all periods.

Our future earnings are sensitive to a number of factors (including those discussed in Item 7 of this Annual Report on Form 10-K) and changes in these factors may have a variety of secondary effects that, in turn, will also impact our earnings. In addition, one of the key factors in projecting our income is the reinvestment rate on new assets and there is no reinvestment assumed in this table.

The composition of our balance sheet and the set of assumptions used at December 31, 2008 differ from those used at December 31, 2007. The assumptions we use reflect the market conditions at the date of the

financial statements, so the future interest rates assumed and corresponding prepayment speeds used to project the cash flows differ from those used a year ago. However, the overall results are similar in that our future results still depend greatly on the credit performance of the underlying loans (although the tabular information assumes no credit losses), future interest rates (as many of our assets are adjustable-rate), prepayment behavior on residential real estate loans, and our ability to invest our capital (also not included in this tabular information).

ITEM 8. FINANCIAL STATEMENTS AND SUPPLEMENTARY DATA

The Consolidated Financial Statements of Redwood Trust, Inc. and Notes thereto, together with the Reports of Independent Registered Public Accounting Firm thereon, are set forth on pages F-3 through F-52 of this Annual Report on Form 10-K and incorporated herein by reference.

ITEM 9. CHANGES AND DISAGREEMENTS WITH ACCOUNTANTS ON ACCOUNTING AND FINANCIAL DISCLOSURE

None.

ITEM 9A. CONTROLS AND PROCEDURES

We have adopted and maintain disclosure controls and procedures that are designed to ensure that information required to be disclosed on our reports under the Securities Exchange Act of 1934, as amended (the Exchange Act) is recorded, processed, summarized, and reported within the time periods specified in the U.S. Securities and Exchange

Commission's rules and forms and that the information is accumulated and communicated to our management, including our chief executive officer and chief financial officer, as appropriate, to allow for timely decisions regarding required disclosure. In designing and evaluation the disclosure controls and procedures, management recognizes that any controls and procedures, no matter how well designed and operated, can provide only reasonable assurance of achieving the desired control objectives, and management is required to apply its judgment in evaluation the cost-benefit relationship of possible controls and procedures.

As required by Rule 13a-15(b) of the Exchange Act, we have carried out an evaluation, under the supervision and with the participation of management, including our chief executive officer and chief financial officer, of the effectiveness of the design and operation of our disclosure controls and procedures as of the end of the quarter covered by this report. Based on the foregoing, our chief executive officer and chief financial officer concluded that our disclosure controls and procedures were effective at a reasonable assurance level.

There have been no changes in our internal control over financial reporting during the fourth quarter of 2008 that have materially affected, or are reasonably likely to materially affect, our internal control over financial reporting.

TABLE OF CONTENTS

MANAGEMENT'S REPORT ON INTERNAL CONTROL OVER FINANCIAL REPORTING

Management of Redwood Trust, Inc., together with its consolidated subsidiaries (the company, or Redwood), is responsible for establishing and maintaining adequate internal control over financial reporting. Our internal control over financial reporting is a process designed under the supervision of our chief executive and chief financial officers to provide reasonable assurance regarding the reliability of financial reporting and the preparation of our financial statements for external reporting purposes in accordance with U.S. generally accepted accounting principles (GAAP).

As of the end of our 2008 fiscal year, management conducted an assessment of the effectiveness of our internal control over financial reporting based on the framework established in *Internal Control – Integrated Framework* issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO). Based on this assessment, management has determined that the company's internal control over financial reporting as of December 31, 2008, was effective.

Our internal control over financial reporting includes policies and procedures that pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect transactions and dispositions of assets; provide reasonable assurances that transactions are recorded as necessary to permit preparation of financial statements in accordance with GAAP, and that receipts and expenditures are being made only in accordance with authorizations of management and the board of directors of Redwood; and provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use or disposition of our assets that could have a material effect on our financial statements.

The company's internal control over financial reporting as of December 31, 2008, has been audited by Grant Thornton LLP, an independent registered public accounting firm, as stated in their report appearing on page F-3, which expresses an unqualified opinion on the effectiveness of the firm's internal control over financial reporting as of December 31, 2008.

**REPORT OF INDEPENDENT REGISTERED PUBLIC
ACCOUNTING FIRM**

Board of Directors and Stockholders of
Redwood Trust, Inc.

We have audited Redwood Trust, Inc.'s (a Maryland Corporation) internal control over financial reporting as of December 31, 2008, based on criteria established in *Internal Control – Integrated Framework* issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO). The Company's management is responsible for maintaining effective internal control over financial reporting and for its assessment of the effectiveness of internal control over financial reporting, included in the accompanying Management's Report on Internal Control Over Financial Reporting. Our responsibility is to express an opinion on the Company's internal control over financial reporting based on our audit.

We conducted our audit in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether effective internal control over financial reporting was maintained in all material respects. Our audit included obtaining an understanding of internal control over financial reporting, assessing the risk that a material weakness exists, testing and evaluating the design and operating effectiveness of internal control based on the assessed risk, and performing such other procedures as we considered necessary in the circumstances. We believe that our audit provides a reasonable basis for our opinion.

A company's internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles. A company's internal control over financial reporting includes those policies and procedures that (1) pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of the company; (2) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that receipts and expenditures of the company are being made only in accordance with authorizations of management and directors of the company; and (3) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use, or disposition of the company's assets that could have a material effect on the financial statements.

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

In our opinion, Redwood Trust, Inc. maintained, in all material respects, effective internal control over financial reporting as of December 31, 2008, based on criteria established in *Internal Control – Integrated Framework* issued by COSO.

We also have audited, in accordance with the standards of the Public Company Accounting Oversight Board (United States), the consolidated balance sheets of Redwood Trust, Inc. (a Maryland corporation) and its subsidiaries (the Company) as of December 31, 2008 and 2007 and the related consolidated statements of (loss) income, comprehensive (loss) income, stockholders' equity (deficit), and cash flows for each of the three years in the period ended December 31, 2008, and our report dated February 25, 2009 expressed an unqualified opinion.

/s/ GRANT THORNTON LLP

San Francisco, CA
February 25, 2009

REPORT OF INDEPENDENT REGISTERED PUBLIC ACCOUNTING FIRM

Board of Directors and Stockholders of
Redwood Trust, Inc.

We have audited the accompanying consolidated balance sheets of Redwood Trust, Inc. (a Maryland Corporation) and its subsidiaries (the Company) as of December 31, 2008 and 2007, and the related consolidated statements of (loss) income, stockholders' equity (deficit) and comprehensive (loss) income, and cash flows for each of the three years in the period ended December 31, 2008. These financial statements are the responsibility of the Company's management.

Our responsibility is to express an opinion on these financial statements, based on our audits.

We conducted our audits in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation. We believe that our audits provide a reasonable basis for our opinion.

In our opinion, the consolidated financial statements referred to above present fairly, in all material respects, the consolidated financial position of the Company as of December 31, 2008 and 2007 and the results of its operations and its cash flows for each of the three years in the period ended December 31, 2008, in conformity with accounting principles generally accepted in the United States of America.

We have also audited, in accordance with the standards of the Public Company Accounting Oversight Board (United States), the effectiveness of the Company's internal control over financial reporting as of December 31, 2008, based on criteria established in *Internal Control - Integrated Framework* issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO) and our report dated February 25, 2009 expressed an unqualified opinion.

As discussed in Note 3 to the financial statements, the Company has adopted Financial Accounting Standards Board Statement No. 157, *Fair Value Measurement*, and Financial Accounting Standards Board Statement No. 159, *The Fair Value Option for Financial Assets and Financial Liabilities - Including an amendment of FASB Statement No. 115*, in 2008.

TABLE OF CONTENTS

REDWOOD TRUST, INC. AND SUBSIDIARIES

NOTES TO FINANCIAL STATEMENTS December 31, 2008

Note 1. Redwood Trust

Redwood Trust, Inc., together with its subsidiaries (Redwood, we, or us), invests in, finances, and manages real estate assets. We invest in residential and commercial real estate loans and in asset-backed securities backed by real estate loans. We seek to invest in assets that have the potential to generate sufficient long-term cash flow returns to support our goal of distributing an attractive level of dividends per share to shareholders over time. For tax purposes, we are structured as a real estate investment trust (REIT).

Redwood was incorporated in the State of Maryland on April 11, 1994, and commenced operations on August 19, 1994. Our executive offices are located at One Belvedere Place, Suite 300, Mill Valley, California 94941.

Note 2. Basis of Presentation

The consolidated financial statements presented herein are at December 31, 2008 and 2007, and for the years ended December 31, 2008, 2007, and 2006. These consolidated financial statements have been prepared in conformity with generally accepted accounting principles in the United States (GAAP) and with the Securities and Exchange Commission's (SEC) instructions to Form 10-K. All amounts presented herein, except per share data, are shown in thousands.

Organization

Our consolidated financial statements include the accounts of Redwood, its direct and indirect wholly-owned subsidiaries, and other entities in which we have a controlling financial interest. All significant intercompany balances and transactions have been eliminated. A number of Redwood's consolidated subsidiaries are qualifying REIT subsidiaries and the remainder are taxable subsidiaries. References to the Redwood REIT mean Redwood and its qualifying REIT subsidiaries, excluding taxable subsidiaries.

We are the asset manager and an investor in the Redwood Opportunity Fund LP (the Fund) that we sponsor. The Fund primarily invests in mortgage-backed securities.

We also sponsor two securitization programs. Our Sequoia program is used for the securitization of residential mortgage loans. References to Sequoia refer collectively to all the consolidated Sequoia securitization entities. Our Acacia program is used for the securitization of mortgage-backed securities and other types of financial assets. References to Acacia refer collectively to all of the consolidated Acacia securitization entities.

Principles of Consolidation

We apply the principles of Statement of Financial Accounting Standards No. 140, *Accounting for Transfers and Servicing of Financial Assets and Extinguishments of Liabilities* (FAS 140) and FASB Interpretation No. 46 (revised), *Consolidation of Variable Interest Entities* (FIN 46(R)) to determine whether we must consolidate any entities where we have continuing involvement. In December 2008, the FASB issued FASB Staff Position 140-4 and FIN 46(R)-8, *Disclosures by Public Entities (Enterprises) about Transfers of Financial Assets and Interests in Variable Interest Entities* (FSP 140-4 and FIN 46(R)-8). The FSP expands the disclosure requirements in FAS 140 about transfers of financial assets and involvements with variable interest entities (VIEs) to require, among other things, disclosure of (1) a transferor's continuing involvement in transferred financial assets and (2) how a transfer of financial assets to an SPE, or an entity's involvement with VIEs, affects the entity's financial position, financial performance, and cash flows.

We consolidate the assets, liabilities, and non-controlling interests of the Fund that we sponsor, as we are the primary beneficiary of this entity as defined by FIN 46(R). The primary beneficiary is the party that absorbs the majority of the VIE's anticipated losses and/or the majority of the expected returns. Our significant limited partnership interests and ongoing asset management responsibilities constitute this majority. We do not service any assets, including assets owned at the Fund. For financial reporting purposes, the underlying securities owned at the Fund are shown on our consolidated balance sheets under real estate

F-10

Note 2. Basis of Presentation (continued)

securities. The portion of the Fund that represents the interest of third parties is shown as minority interest on our consolidated balance sheets and the portion of income allocable to third parties is shown as minority interest allocation in our consolidated statements of (loss) income.

We consolidate the assets and liabilities of the Sequoia and Acacia securitizations that we sponsor that are not accounted for as sales. These entities did not meet the criteria for sale accounting as prescribed by FAS 140 at the time we transferred financial assets to them. Our continuing involvement includes our retention of junior interests and call rights and certain ongoing management responsibilities or other discretionary activities. We do not service any assets, including assets owned at Sequoia or Acacia. For financial reporting purposes, the underlying loans and securities owned at Sequoia and Acacia entities accounted for as secured borrowings are shown on our consolidated balance sheets under real estate loans and real estate securities. The asset-back securities (ABS) issued to third parties are shown on our consolidated balance sheets under ABS issued. In our consolidated statements of (loss) income, we record interest income on the loans and securities and interest expense on the ABS issued.

Prior to the fourth quarter of 2008, we consolidated all of the Sequoia and Acacia entities that we sponsor. During the fourth quarter of 2008, we derecognized the assets and liabilities of certain Sequoia entities due to a sale of our variable interests in such entities and lack of continuing involvement. The assets and liabilities of those entities are no longer shown on our consolidated balance sheets as of December 31, 2008.

See *Note 6* for further discussion on our sale of Sequoia interests and resulting deconsolidation.

Note 3. Summary of Significant Accounting Policies

Reclassifications

During the third quarter of 2008, we changed the presentation of our consolidated statements of (loss) income to include, as a separate line item, the provision for loan losses. We determined that this expense had become a material component of net interest income and no longer present it as a component of interest income. This change did not impact our current or prior period financial statements. The consolidated statements of (loss) income reported during previous periods and referenced herein have been modified to conform to the current presentation. The associated allowance for loan losses continues to be presented as a component of real estate loans on our consolidated balance sheets.

Use of Estimates

The preparation of financial statements in conformity with GAAP requires us to make a number of significant estimates. These include estimates of fair value of certain assets and liabilities, amount and timing of credit losses, prepayment rates, the period of time during which we anticipate an increase in the fair values of real estate securities sufficient to recover unrealized losses in those securities, and other estimates that affect the reported amounts of certain assets and liabilities as of the date of the consolidated financial statements and the reported amounts of certain revenues and expenses during the reported period. It is likely that changes in these estimates (e.g., valuation changes due to supply and demand, credit performance, prepayments, interest rates, or other reasons) will occur in the near term. Our estimates are inherently subjective in nature and actual results could differ from our estimates and the differences may be material.

Fair Value Measurements

Our financial statements include assets and liabilities that are measured at their estimated fair values. Effective January 1, 2008, we adopted two pronouncements relating to fair value measurements: Statement of Financial Accounting Standards No. 157, *Fair Value Measurements* (FAS 157) and Statement of Financial Accounting Standards No. 159, *The Fair Value Option for Financial Assets and Financial Liabilities Including an amendment of FASB Statement No. 115* (FAS 159).

F-11

TABLE OF CONTENTS

REDWOOD TRUST, INC. AND SUBSIDIARIES

NOTES TO FINANCIAL STATEMENTS

December 31, 2008

Note 3. Summary of Significant Accounting Policies (continued)

For GAAP, a fair value measurement represents the price at which a transaction would occur between market participants. This price implies an orderly transaction, or exit price, that is not a forced liquidation or distressed sale at the measurement date. Redwood's approach to developing fair values for financial assets or liabilities focuses on available inputs and pricing that is observed in the market place. Examples of the market information that we attempt to obtain include the following:

Quoted prices for the same or similar securities;

Relevant reports issued by analysts and rating agencies;

The current level of interest rates and any directional movements in relevant indexes, such as credit risk indexes; Information about the performance of the underlying mortgage loans, such as delinquency and foreclosure rates, loss experience, and prepayment rates;

Indicative prices or yields from broker/dealers; and,

Other relevant observable inputs, including nonperformance risk and liquidity premiums.

After considering all available indications of the appropriate rate of return that market participants would consider relevant in estimating fair value, we consider the reasonableness of the range indicated by the results to determine an estimate that is representative of fair value.

Establishing fair values for illiquid assets and liabilities is inherently subjective and is often dependent upon our estimates and modeling assumptions. The use of our internal assumptions about future cash flows and appropriately risk-adjusted discount rates are used in determining fair value when relevant observable inputs are not available. In

cases where the volume and level of trading activity in the asset declined significantly, the available prices vary significantly over time or among market participants, or the prices are not current, the observable inputs might not be relevant and could require significant adjustment. While broker (or pricing service) quotes may be an appropriate input when measuring fair value, they are not necessarily determinative if an active market does not exist for the financial asset or liability. The nature of the quote (for example, whether the quote is an indicative price or a binding offer) is considered when weighing the available evidence.

Since the second half of 2007, the market for residential, commercial, and collateralized debt obligation (CDO) credit enhancement securities (CES), and most real estate investment grade securities (IGS), has become increasingly inactive. The inactivity was evidenced by a significant widening of the bid-ask spread in the brokered markets in which these securities trade and by a significant decrease in the volume of trades relative to historical levels. There were few observable transactions for our securities or similar securities, if any, and indicative prices for these securities varied substantially over time and among market makers, thus reducing the potential relevance of those observations.

In October 2008, the FASB issued FASB Staff Position 157-3, *Determining Fair Value of a Financial Asset in a Market That Is Not Active* (FSP 157-3). FSP 157-3 clarified the application of FAS 157 in an inactive market. The implementation of this standard did not have a material impact on our consolidated financial position and results of operations as our existing valuation methodology is consistent with the FASB's clarification.

See *Note 4* and *Note 5* for further discussion on fair value estimates.

F-12

TABLE OF CONTENTS

REDWOOD TRUST, INC. AND SUBSIDIARIES

NOTES TO FINANCIAL STATEMENTS December 31, 2008

Note 3. Summary of Significant Accounting Policies (continued)

Real Estate Loans

Residential and Commercial Real Estate Loans Fair Value

Residential and commercial real estate loans at fair value are loans where we have elected the fair value option under FAS 159. The fair value option was elected on January 1, 2008, for all the loans owned by Acacia securitization entities as of that date. Coupon interest is recognized as revenue when earned and deemed collectible or until a loan becomes more than 90 days past due. Changes in fair value (gains and losses) are recurring and are reported through our consolidated statements of (loss) income in market valuation adjustments, net.

Residential and Commercial Real Estate Loans Held-for-Sale

Residential and commercial real estate loans held-for-sale are loans that we are marketing for sale to independent third parties. These loans are carried at the lower of their cost or fair value in accordance with Statement of Financial Accounting Standards No. 65, *Accounting for Certain Mortgage Banking Activities* (FAS 65), as measured on an individual basis. Coupon interest is recognized as revenue when earned and deemed collectible or until a loan becomes more than 90 days past due. If fair value is lower than amortized cost, changes in fair value (gains and losses) are reported through our consolidated statements of (loss) income in market valuation adjustments, net.

Residential and Commercial Real Estate Loans Held-for-Investment

Real estate loans held-for-investment include residential real estate loans owned and securitized at Sequoia entities and commercial real estate loans owned at Redwood. These loans are carried at their unpaid principal balances adjusted for net unamortized premiums or discounts and net of any allowance for credit losses. Coupon interest is recognized as revenue when earned and deemed collectible or until a loan becomes more than 90 days past due. Interest previously accrued on loans that become greater than 90 days past due is reserved against in the allowance for loan losses. Cash principal and interest that is advanced from servicers subsequent to a loan becoming greater than 90 days past due is used to reduce the outstanding loan principal balance. Pursuant to Statement of Financial Accounting Standards No. 91, *Accounting for Nonrefundable Fees and Costs Associated with Originating or Acquiring Loans and Initial Direct Cost of Leases* (FAS 91), we use the interest method to determine an effective yield and to amortize the premium or discount on real estate loans held-for-investment. For residential loans acquired prior to July 1, 2004, we use coupon interest rates as they change over time and anticipated principal payments to determine an effective yield to amortize the premium or discount. For residential loans acquired after July 1, 2004, we use the initial coupon interest rate of the loans (without regard to future changes in the underlying indices) and anticipated principal payments to calculate an effective yield to amortize the premium or discount.

We may exercise our right to call ABS issued by Sequoia and may subsequently sell the underlying loans to third parties. We reclassify held-for-investment loans to held-for-sale loans once we determine that loans will be sold to third parties. Gains or losses on the sale of real estate loans are based on the specific identification method.

See *Note 6* for further discussion on the sale of Sequoia interests.

Real Estate Loans Allowance for Loan Losses

For real estate loans classified as held-for-investment, we establish and maintain an allowance for loan losses based on our estimate of credit losses inherent in our loan portfolios as of the reporting date. To calculate the allowance for loan losses, we assess inherent losses by determining loss factors (defaults, the timing of defaults, and loss severities upon defaults) that can be specifically applied to each of the consolidated loans or pool of loans.

F-13

TABLE OF CONTENTS

REDWOOD TRUST, INC. AND SUBSIDIARIES

NOTES TO FINANCIAL STATEMENTS December 31, 2008

Note 3. Summary of Significant Accounting Policies (continued)

We follow the guidelines of SEC Staff Accounting Bulletin No. 102, *Selected Loan Loss Allowance Methodology and Documentation* (SAB 102), Statement of Financial Accounting Standards No. 5, *Accounting for Contingencies* (FAS 5), Statement of Financial Accounting Standards No. 114, *Accounting by Creditors for Impairment of a Loan* (FAS 114), and Statement of Financial Accounting Standards No. 118, *Accounting by Creditors for Impairment of a*

Loan-Income Recognition and Disclosures (FAS 118) in setting the allowance for loan losses.

We consider the following factors in making such determinations:

Ongoing analyses of loans, including, but not limited to, the age of loans, underwriting standards, business climate, economic conditions, geographical considerations, and other observable data;

Historical loss rates and past performance of similar loans;

Relevant environmental factors;

Relevant market research and publicly available third-party reference loss rates;

Trends in delinquencies and charge-offs;

Effects and changes in credit concentrations;

Information supporting a borrower's ability to meet obligations;

Ongoing evaluations of fair values of collateral using current appraisals and other valuations; and,

Discounted cash flow analyses.

Once we determine applicable default amounts, the timing of the defaults, and severity of losses upon defaults, we estimate expected losses for each individual loan or pool of loans over its expected life. We then estimate the timing of these losses and the losses probable to occur over an effective loss confirmation period. This period is defined as the range of time between the occurrence of a credit loss (such as the initial deterioration of the borrower's financial condition) and the confirmation of that loss (the actual impairment or charge-off of the loan). The losses expected to occur within the estimated loss confirmation period are the basis of our allowance for loan losses, since we believe these losses exist as of the reported date of the financial statements. We re-evaluate the adequacy of our allowance for loan losses on at least a quarterly basis.

See *Note 7* for further discussion on the allowance for loan losses.

We do not currently maintain a loan repurchase reserve, as we do not originate real estate loans and we believe that any risk of loss due to loan repurchases (i.e., due to breach of representations and warranties) would be a contingency to the companies from whom we acquired the loans and therefore would be covered by our recourse to those companies. Management is not aware of any outstanding repurchase claims against Redwood.

Real Estate Securities, at Fair Value

Trading Securities

Trading securities include residential, commercial, and CDO real estate securities. Trading securities are carried at their estimated fair values. Coupon interest is recognized as interest income when earned and deemed collectible and all changes in fair value are reported through our consolidated statements of (loss) income in market valuation adjustments, net.

We primarily denote trading securities as those securities where we have adopted the fair value option under FAS 159.

We currently account for certain IGS and CES at Redwood and all securities at Acacia

TABLE OF CONTENTS

REDWOOD TRUST, INC. AND SUBSIDIARIES

NOTES TO FINANCIAL STATEMENTS

December 31, 2008

Note 3. Summary of Significant Accounting Policies (continued)

entities as trading securities. Prior to the adoption of FAS 159, trading securities were accounted for in accordance with Statement of Financial Accounting Standards No. 115, *Accounting for Certain Investments in Debt and Equity Securities* (FAS 115).

Available-for-Sale Securities

Available-for-sale (AFS) securities include certain residential, commercial, and CDO real estate securities. AFS securities are carried at their estimated fair values with cumulative unrealized gains and losses reported as a component of accumulated other comprehensive income (loss) in our consolidated statements of stockholders' equity (deficit), in accordance with FAS 115. We currently account for most IGS and CES at Redwood and all securities at the Fund as AFS securities.

When recognizing revenue on our AFS securities, we have determined that credit risk is not remote and therefore employ the interest method as prescribed under the Emerging Issues Task Force of the Financial Accounting Standards Board 99-20, *Recognition of Interest Income and Impairment on Purchased and Retained Beneficial Interests in Securitized Financial Assets* (EITF 99-20). Coupon interest is recognized as interest income when earned and deemed collectible, and the interest method is used to determine an effective yield to amortize purchase premiums, discounts, and fees associated with these securities into income over time. This requires us to project cash flows over the remaining life of each asset, which includes assumptions about interest rates, prepayment rates, the timing and amount of credit losses, and other factors. We review and make adjustments to our cash flow projections on an ongoing basis and monitor these projections based on input and analyses received from external sources, internal models, and our own judgment and experience. Actual maturities of the AFS securities are affected by the contractual lives of the associated mortgage collateral, periodic payments of principal, and prepayments of principal. Therefore actual maturities of AFS securities are generally shorter than stated contractual maturities. Stated contractual maturities are generally greater than ten years. There can be no assurance that our assumptions used to estimate future cash flows or the current period's yield for each asset would not change in the near term, and the change could be material.

Yields recognized for each security can vary as a function of credit results, prepayment rates, and interest rates. For the securities we acquire, if estimated future credit losses are less than our prior estimate, credit losses occur later than expected, or prepayment rates are faster than expected (meaning the present value of projected cash flows is greater than previously expected), the yield over the remaining life of the security may be adjusted upwards. If estimated future credit losses exceed our prior expectations, credit losses occur more quickly than expected, or prepayments occur more slowly than expected (meaning the present value of projected cash flows is less than previously expected), the yield over the remaining life of the security may be adjusted downward.

We assess each quarter whether a decline in fair value below our cost of the AFS security is other-than-temporary impairment. For determining other-than-temporary impairment, we use the guidelines prescribed under FAS 115, EITF 99-20, and SEC Staff Accounting Bulletin No. 5(m), *Other-Than-Temporary Impairment for Certain Investments in Debt and Equity Securities* (commonly referred to as SAB 59). If there has been an adverse change in the projected future cash flows of the security, we no longer have the ability and intent to hold the security, or we have determined that there will not likely be a recovery of fair value up to (or beyond) the amortized cost of the security

within a reasonable period of time, there is other-than-temporary impairment. Upon the determination of other-than-temporary impairment, any associated accumulated other comprehensive loss is reclassified into earnings using the specific identification method and reported under market valuation adjustments, net, in our consolidated statements of (loss) income.

In January 2009, the FASB issued FASB Staff Position EITF 99-20-1, *Amendments to the Impairment Guidance of EITF Issue No. 99-20* (FSP EITF 99-20-1). FSP EITF 99-20-1 amends the impairment guidance in EITF 99-20 to achieve a more consistent determination of whether other-than-temporary impairment has

F-15

TABLE OF CONTENTS

NOTES TO FINANCIAL STATEMENTS

December 31, 2008

Note 3. Summary of Significant Accounting Policies (continued)

occurred. The implementation of this standard did not impact our consolidated financial position and results of operations as our existing valuation methodology is consistent with the FASB's clarification.

See *Note 8* for further discussion on real estate securities.

Other Investments

Other investments include a guaranteed investment contract (GIC) entered into by an Acacia securitization entity that we consolidate for financial statements purposes. We elected the fair value option under FAS 159 for this investment on January 1, 2008, and it is recorded on our consolidated balance sheets at its estimated fair value. Changes in fair value are reported through our consolidated statements of (loss) income through market valuation adjustments, net.

Interest income is reported through our consolidated statements of (loss) income through interest income, other investments.

See *Note 9* for further discussion on other investments.

Cash and Cash Equivalents

Cash and cash equivalents include cash on hand and highly liquid investments with original maturities of three months or less. At December 31, 2008, we did not have any significant concentrations of credit risk arising from cash deposits as 96% of our cash and cash equivalents were invested in U.S. Government Treasury Bills or FDIC-insured bank products. We have subsequently taken steps to put 100% of our domestic cash in direct obligations of the U.S. government or instruments insured by the FDIC.

Restricted Cash

Restricted cash includes principal and interest payments from real estate loans and securities owned by consolidated securitization entities that are collateral for, or payable to, owners of ABS issued by those entities and cash pledged as collateral on interest rate agreements. Restricted cash may also include cash retained in Acacia or Sequoia securitization entities or in the Fund prior to the purchase of loans or securities, payments on or redemption of outstanding ABS issued, or distributions to limited partners.

Accrued Interest Receivable

Accrued interest receivable represents interest that is due and payable to us. Cash interest is generally received within thirty days of recording the receivable. For financial assets where we have elected the fair value option under FAS 159, the associated accrued interest on these assets is measured at fair value. For financial assets where we have not elected to adopt FAS 159, the associated accrued interest carrying values approximate fair values.

Derivative Financial Instruments

Derivative financial instruments include contractual interest rate agreements and credit default swaps (CDS). All derivative financial instruments are reported at fair value on our consolidated balance sheets, in accordance with Statement of Financial Accounting Standards No. 133, *Accounting for Derivative Instruments and Hedging Activities* (FAS 133) and FAS 159. Derivatives with a positive value to us are reported as an asset and derivatives with a negative value to us are reported as a liability. The changes in fair value of derivatives accounted for as trading instruments are reported in the consolidated statements of (loss) income through market valuation adjustments, net.

Interest Rate Agreements

We maintain an overall interest rate risk management strategy that incorporates the use of interest rate agreements. We enter into interest rate agreements for a variety of reasons, including minimizing significant fluctuations in earnings or market values on certain assets or liabilities that may be caused by interest rate

F-16

TABLE OF CONTENTS

REDWOOD TRUST, INC. AND SUBSIDIARIES

NOTES TO FINANCIAL STATEMENTS

December 31, 2008

Note 3. Summary of Significant Accounting Policies (continued)

volatility. Interest rate agreements that we use as part of our interest rate risk management strategy may include interest rate options, swaps, options on swaps, futures contracts, options on futures contracts, and options on forward purchases.

Prior to 2008, we accounted for derivatives used to hedge interest rate exposure in Acacia securitization entities as cash flow hedges. At January 1, 2008, all of our consolidated derivatives designated as cash flow hedges were de-designated as cash flow hedges and accounted for as trading instruments. Since the associated hedged items continue to exist, the fair value of cash flow hedges at the time of de-designation remains in accumulated other comprehensive loss and is amortized using the straight line method through interest expense over the remaining lives of the hedged Acacia ABS issued. Net purchases and proceeds from interest rate agreements are classified as financing activities within our consolidated statements of cash flows.

Credit Derivatives

A credit default swap (CDS) is an agreement to provide (receive) credit event protection based on a financial index or specific security in exchange for receiving (paying) a fixed-rate fee or premium over the term of the contract. These instruments enable us to synthetically assume the credit risk of a reference security or index of securities. All of our existing CDS contracts were initiated during 2007 by one of the Acacia entities that we have consolidated for financial reporting purposes. Net purchases and proceeds from CDS are classified as financing activities within our consolidated statements of cash flows.

In September 2008, the FASB issued FASB Staff Position 133-1 and FIN 45-4, *Disclosures about Credit Derivatives and Certain Guarantees: An Amendment of FASB Statement No. 133 and FASB Interpretation No. 45; and Clarification of the Effective Date of FASB Statement No. 161* (FSP 133-1 and FIN 45-4). FSP 133-1 and FIN 45-4 requires enhanced disclosures about credit derivatives and guarantees and amends FIN 45, *Guarantor's Accounting and Disclosure Requirements for Guarantees, Including Indirect Guarantees of Indebtedness of Others* to exclude credit derivative instruments accounted for at fair value under FAS 133. The implementation of these standards resulted in enhanced disclosures, including potential payouts and underlying characteristics of credit derivatives, and did not impact our consolidated financial position and results of operations.

See *Note 10* for further discussion on derivative financial instruments.

Deferred Tax Assets

Income recognition for GAAP and tax differ in material respects. These differences often reflect differing accounting treatments for tax and GAAP, such as accounting for discount and premium amortization, credit losses, equity awards, asset impairments, and certain valuation estimates. Some of these differences are temporary in nature and create timing mismatches between when taxable income is earned and the tax is paid versus when the GAAP income is recognized and the tax provision is recorded. Some of these differences are permanent since certain income (or expense) may be recorded for tax but not for GAAP (or vice-versa). One such significant permanent difference is our ability as a REIT to deduct dividends paid to shareholders as an expense for tax, but not for GAAP.

As a result of these differences, we may recognize taxable income in periods prior to when we recognize income for GAAP. When this occurs, we pay the tax liability and establish a deferred tax asset for GAAP. As the income is subsequently realized in future periods under GAAP, the deferred tax asset is recognized as an expense. Our deferred tax assets are primarily generated by differences in GAAP and taxable income at our taxable subsidiaries. GAAP and tax differences at the REIT may create additional deferred tax assets or liabilities to the extent we do not distribute all of our taxable income.

See *Note 20* for further discussion on deferred tax assets.

REDWOOD TRUST, INC. AND SUBSIDIARIES

NOTES TO FINANCIAL STATEMENTS December 31, 2008

Note 3. Summary of Significant Accounting Policies (continued)

Deferred Asset-Backed Securities Issuance Costs

ABS issuance costs are costs associated with the issuance of ABS from the securitization entities we sponsor. These costs typically include underwriting, rating agency, legal, accounting, and other fees. ABS issuance costs associated with liabilities accounted for under the fair value option are expensed as incurred. ABS issuance costs associated with liabilities reported at cost are deferred. Deferred ABS issuance costs are reported on our consolidated balance sheets as deferred charges and are amortized as an adjustment to interest expense using the interest method, based upon the actual and estimated repayment schedules of the related ABS issued under the principles prescribed in Accounting Practice Bulletin 21, *Interest on Receivables and Payables* (APB 21). Sequoia deferred ABS issuance costs are accounted for in accordance with APB 21.

As of January 1, 2008, the deferred issuance costs associated with Acacia were included in the fair value of ABS issued by Acacia and were accounted for under FAS 159. As a result, these costs were included in our one-time adjustment upon the adoption of FAS 159 and were reclassified into retained earnings.

Other Assets

Other assets on our consolidated balance sheets include real estate owned (REO), fixed assets, purchased interest, principal receivable, and other prepaid expenses. REO is reported at the lower of cost or fair value. All other assets are reported at cost.

See *Note 11* for further discussion on other assets.

Short-Term Debt

Short-term debt can include master repurchase agreements (MRA), bank borrowings, and other forms of collateralized borrowings with various commercial banks and investment banks that expire within one year. These facilities may be unsecured or collateralized by loans or securities. Borrowings under short-term debt facilities generally bear interest rates of a specified margin over one-month LIBOR and are generally uncommitted.

See *Note 12* for further discussion on short-term debt.

Accrued Interest Payable

Accrued interest payable represents interest that is due and payable to third parties. Interest is generally paid within thirty days to three months of recording the payable, based upon our remittance requirements. For borrowings where we have elected the fair value option under FAS 159, the associated accrued interest on these liabilities is measured at

fair value. For financial liabilities where we have not elected to adopt FAS 159, the associated accrued interest carrying values approximate fair values.

Asset Backed Securities Issued Sequoia and Acacia

The majority of the liabilities reported on our consolidated balance sheets represent ABS, issued by bankruptcy-remote securitization entities sponsored by Redwood.

Sequoia and Acacia assets are held in the custody of trustees. Trustees collect principal and interest payments (less servicing and related fees) from the assets and make corresponding principal and interest payments to the ABS investors. ABS obligations are payable solely from the assets of these entities and are not obligations of Redwood.

Sequoia ABS Issued

Sequoia ABS issued are carried at their unpaid principal balances net of any unamortized discount or premium.

F-18

TABLE OF CONTENTS

REDWOOD TRUST, INC. AND SUBSIDIARIES

NOTES TO FINANCIAL STATEMENTS December 31, 2008

Note 3. Summary of Significant Accounting Policies (continued)

Acacia ABS Issued

Effective January 1, 2008, Acacia ABS issued are accounted for under FAS 159 and carried at their estimated fair values on our consolidated balance sheets. Changes in fair value (gains or losses) are reported in our consolidated statements of (loss) income through market valuation adjustments, net. Prior to January 1, 2008, Acacia ABS issued were accounted for under the same method as Sequoia ABS issued.

See *Note 13* for further discussion on ABS issued.

Long-Term Debt

Long-term debt includes trust preferred securities and subordinated notes at Redwood. Both are unsecured debt, requiring quarterly interest payments at a floating rate equal to the London Interbank Offered Rate (LIBOR) plus a margin until they are redeemed in whole or mature at a future date. These notes contain an earlier optional redemption date without penalty. Long-term debt is carried at its unpaid principal balance.

See *Note 14* for further discussion on long-term debt.

Minority Interest

Minority interest represents the aggregate limited partnership interests in the Fund held by third parties.

See *Note 16* for further discussion on minority interest.

Stockholders' Equity

(Loss) Earnings Per Share

Basic (loss) earnings per share are computed by dividing net (loss) income by the weighted average number of common shares outstanding during the period. Diluted (loss) earnings per share are computed by dividing net (loss) income by the weighted average number of common shares and potential common shares outstanding during the period. Potential common shares outstanding are calculated using the treasury stock method, which assumes that all dilutive common stock equivalents are exercised and the funds generated by the exercises are used to buy back outstanding common stock at the average market price of the common stock during the reporting period. In accordance with Statement of Financial Accounting Standards No. 128, *Earnings per Share* (FAS 128), if there is a loss from continuing operations, the common stock equivalents are deemed antidilutive and diluted (loss) earnings per share is calculated in the same manner as basic (loss) earnings per share.

Other Comprehensive (Loss) Income

Current period net unrealized gains and losses on real estate securities available-for-sale and interest rate agreements previously designated as cash flow hedges under FAS 133 are reported as components of other comprehensive (loss) income on our consolidated statements of stockholders' equity (deficit) and comprehensive (loss) income. Net unrealized gains and losses on securities and interest rate agreements held by our taxable subsidiaries that are reported in other comprehensive (loss) income are adjusted for the effects of taxation and may create deferred tax assets or liabilities.

Equity Compensation Plans

Incentive Plan

In March 2008, we amended our previously amended 2002 Redwood Trust, Inc. Incentive Plan (Incentive Plan) for executive officers, employees, and non-employee directors. This amendment was approved by our shareholders in May 2008. The Incentive Plan authorizes our Board of Directors (or a committee appointed by our Board of Directors) to grant incentive stock options (ISOs), non-qualifying stock options (NQSOs), deferred stock units (DSUs), restricted stock, performance shares, stock appreciation rights, limited stock appreciation rights (awards), and dividend equivalent rights (DERs) to eligible recipients other than non-employee directors.

F-19

TABLE OF CONTENTS

REDWOOD TRUST, INC. AND SUBSIDIARIES

NOTES TO FINANCIAL STATEMENTS

December 31, 2008

Note 3. Summary of Significant Accounting Policies (continued)

The cost of equity awards is determined in accordance with Statement of Financial Accounting Standards No. 123R, *Share-Based Payment* (FAS 123R), and amortized over the vesting term using an accelerated method in accordance with FASB Interpretation No. 28 *Accounting for Stock Appreciation Rights and Other Variable Stock Options or Award Plans* (FIN 28) and FAS 123R. Stock options, deferred stock units, and restricted stock granted to employees generally vest over a four-year period. Non-employee directors are provided annual awards under the Incentive Plan that generally vest immediately.

Employee Stock Purchase Plan

In May 2002, our stockholders approved our 2002 Redwood Trust, Inc. Employee Stock Purchase Plan (ESPP), effective July 1, 2002. The purpose of the ESPP is to give our employees an opportunity to acquire an equity interest in Redwood through the purchase of shares of common stock at a discount. The ESPP allows eligible employees to purchase common stock at 85% of its fair value, subject to limits. Fair value as defined under the ESPP is the lesser of the closing market price of the common stock on the first day of the calendar year or the first day of the calendar quarter.

Executive Deferred Compensation Plan

In May 2002, our Board of Directors approved our 2002 Executive Deferred Compensation Plan (EDCP). The EDCP allows eligible employees and directors to defer portions of current salary and certain other forms of compensation. Redwood matches some deferrals. Compensation deferred under the EDCP is an asset of Redwood and subject to the claims of the general creditors of Redwood. The EDCP allows for the investment of deferrals in either an interest crediting account or additional DSUs.

See *Note 18* for further discussion on equity compensation plans.

Taxes

We have elected to be taxed as a REIT under the Internal Revenue Code and the corresponding provisions of state law. To qualify as a REIT we must distribute at least 90% of our annual REIT taxable income to shareholders (not including taxable income retained in our taxable subsidiaries) within the time frame set forth in the tax code and we also meet certain other requirements. Through the second quarter of 2008, we had elected to retain up to 10% of our REIT ordinary taxable income and had provisioned for corporate income taxes on the retained income while maintaining our REIT status. In August 2008, our Board of Directors decided to distribute as dividends 100% of our REIT taxable income generated in 2007 and 2008.

We assess our tax positions for all open tax years and determine whether we have any material unrecognized liabilities in accordance with Financial Accounting Standard Board Interpretation Number 48, *Accounting for Uncertainty in Income Taxes*, (FIN 48). We record these liabilities to the extent we deem them incurred. We classify interest and penalties on material uncertain tax positions as interest expense and operating expense, respectively, in our consolidated statements of (loss) income.

See *Note 20* for further discussion on taxes.

Recent Accounting Pronouncements

In December 2007, the FASB issued Statement of Financial Accounting Standards No. 160, *The Noncontrolling Interests in Consolidated Financial Statements, an amendment of ARB No. 51* (FAS 160). FAS 160 establishes accounting and reporting standards for the noncontrolling interest in a subsidiary and for the deconsolidation of a subsidiary. FAS 160 clarifies that a noncontrolling interest in a subsidiary should be reported as a component of equity in the consolidated financial statements and requires disclosure, on the face of the consolidated statement of (loss) income, of the amounts of consolidated net income attributable to the parent and to the noncontrolled interest. FAS 160 is effective beginning January 1, 2009, with early adoption not permitted. FAS 160 is to be applied prospectively, except for the presentation and disclosure requirements,

F-20

TABLE OF CONTENTS

REDWOOD TRUST, INC. AND SUBSIDIARIES

NOTES TO FINANCIAL STATEMENTS

December 31, 2008

Note 3. Summary of Significant Accounting Policies (continued)

which upon adoption will be applied retrospectively for all periods presented. Although we do not expect a significant impact on our results of operations or cash flows, the adoption of FAS 160 will increase our reported equity on our consolidated balance sheets by the amount of any aggregate minority interests, possibly resulting in an increase in GAAP book value.

In December 2007, the FASB issued a revision to Statement of Financial Accounting Standard No. 141, *Business Combinations* (FAS 141R). FAS 141R requires changes to the accounting for transaction costs, certain contingent assets and liabilities, and other balances in a business combination. In addition, in partial acquisitions, when control is obtained, the acquiring company must measure and record all of the target's assets and liabilities, including goodwill, at fair value as if the entire target company had been acquired. We will apply the provisions of FAS 141R to business combinations occurring after December 31, 2008. Adoption of FAS 141R will not affect our financial condition, results of operations or cash flows, but may have an effect on our accounting for potential future business combinations.

In February 2008, the FASB issued FASB Staff Position 140-3, *Accounting for Transfers of Financial Assets and Repurchase Financing Transactions* (FSP 140-3). FSP 140-3 provides that a transferor and a transferee must account for a transfer of a financial asset and a repurchase financing with the same counterparty (or consolidated affiliates of either counterparty) as a linked transaction if the transfer and repurchase financing were entered into contemporaneously or in contemplation of each other unless certain specified criteria are met. Under FSP 140-3, a repurchase financing is a transaction in which the buyer (initial transferee) of a financial asset obtains financing from the seller (initial transferor) and transfers the financial asset back to the seller as collateral until the financing is repaid.

FSP 140-3 is effective beginning January 1, 2009, with early adoption not permitted. FSP 140-3 is to be applied prospectively to initial transfers and repurchase financings for which the initial transfer is executed on or after the

beginning of the fiscal year in which this FSP is initially applied. We do not expect a significant impact on our financial position, results of operations, or cash flows.

In March 2008, the FASB issued Statement of Financial Accounting Standards No. 161, *Disclosures about Derivative Instruments and Hedging Activities, an Amendment of FASB Statement No. 133* (FAS 161). FAS 161 amends and expands the disclosure requirements of FAS 133 to provide greater transparency about how and why an entity uses derivative instruments, how derivative instruments and related hedge items are accounted for under FAS 133 and its related interpretations, and how derivative instruments and related hedged items affect an entity's financial position, results of operations, and cash flows. To meet those objectives, FAS 161 requires qualitative disclosures about objectives and strategies for using derivatives, quantitative disclosures about fair value amounts of gains and losses on derivative instruments, and disclosures about credit risk related contingent features in derivative agreements. FAS 161 is effective January 1, 2009, and early adoption is encouraged. We do not expect a significant impact on our financial position, results of operations, or cash flows.

In June 2008, the FASB issued Staff Position EITF 03-6-1, *Determining Whether Instruments Granted in Share-Based Payment Transactions Are Participating Securities* (EITF 03-6-1). EITF 03-6-1 states that unvested share-based payment awards that contain nonforfeitable rights to dividends or dividend equivalents are participating securities as defined in EITF 03-6, *Participating Securities and the Two-Class Method under FASB Statement No. 128* (EITF 03-6), and therefore should be included in computing earnings per share using the two-class method. According to EITF 03-6-1, a share-based payment award is a participating security when the award includes nonforfeitable rights to dividends or dividend equivalents. The rights result in a noncontingent transfer of value each time an entity declares a dividend or dividend equivalent during the award's vesting period. However, the award would not be considered a participating security if the holder forfeits the right to receive dividends or dividend equivalents in the event that the award does not vest. EITF 03-6-1 is effective for financial statements issued in fiscal years beginning after December 15, 2008, and

F-21

TABLE OF CONTENTS

REDWOOD TRUST, INC. AND SUBSIDIARIES

NOTES TO FINANCIAL STATEMENTS

December 31, 2008

Note 3. Summary of Significant Accounting Policies (continued)

interim periods within those years. When adopted, its requirements are applied by recasting previously reported earnings per share (EPS). We do not expect a significant impact on our financial position, results of operations, cash flows, or EPS.

Note 4. Fair Value Option

FAS 159 gives us the option of electing to measure eligible financial assets, financial liabilities, and commitments at fair value on an instrument-by-instrument basis. This election is available when we first recognize a financial asset or

financial liability or enter into a firm commitment, or upon the initial adoption of FAS 159 on January 1, 2008. Subsequent changes in the fair value of these assets, liabilities, and commitments are recorded in the consolidated statements of (loss) income.

Our decision to adopt FAS 159 for new financial instruments is generally based upon our funding strategy for the specific financial asset acquired. For example, securities that we anticipate funding with equity will generally be accounted for as AFS securities under FAS 115. Securities that we anticipate funding with a combination of debt and equity or are or may be financed through securitization liabilities will generally be accounted for at fair value under FAS 159 along with the corresponding liabilities.

Transition Adjustment Due to the Adoption of FAS 159 on January 1, 2008

We adopted FAS 159 on January 1, 2008, and elected to apply the fair value option for the assets (loans, securities, and unamortized deferred ABS issuance costs) and liabilities (ABS issued) of our consolidated Acacia securitization entities. We also elected the fair value option for certain securities at Redwood that we anticipated potentially selling or securitizing in the future. We did not elect the fair value option for the assets and liabilities at Sequoia, as these assets and liabilities are accounted for using similar measurement attributes (i.e., cost basis) and do not generally create substantial volatility in our earnings. We also did not elect the fair value option for most CES and other investments at Redwood, as these assets were funded with equity and are not anticipated to be funded with a combination of debt and equity in the future, or securitized.

Prior to the application of FAS 159, we were required to mark-to-market the assets, but not the liabilities, of Acacia entities, even though the assets and liabilities were paired within the same legal structure and the ABS issued by each Acacia entity would be repaid directly and solely from the cash flows generated by the assets of that entity. Electing the fair value option for the assets and liabilities of Acacia enabled us to mitigate the volatility in earnings and book value that results from the use of different measurement attributes. As a result of this fair value election we de-designated all cash flow hedge accounting elections for our interest rate agreements, which reduced the complexity of accounting with regards to derivatives under FAS 133. Additionally, there was no deferred tax impact associated with the adoption since the net unrealized losses in accumulated other comprehensive loss that were reclassified to retained earnings were generated at the REIT, which distributes predominantly all of its taxable income.

F-22

REDWOOD TRUST, INC. AND SUBSIDIARIES

NOTES TO FINANCIAL STATEMENTS

December 31, 2008

Note 4. Fair Value Option (continued)

The following table presents the resulting \$1.5 billion cumulative effect transition adjustment of this one-time election of FAS 159 and its effect on the consolidated total assets and total liabilities and stockholders' equity (deficit) at January 1, 2008.

(In Millions)	December 31, 2007 Redwood Consolidated	Transition Adjustment	January 1, 2008 Redwood Consolidated
Real estate loans	\$ 7,204	\$ (2)	\$ 7,202
Real estate securities and other investments	2,201		2,201
Cash and cash equivalents	290		290
Total earning assets	9,695	(2)	9,693
Restricted cash	118		118
Deferred asset-backed issuance costs	40	(21)	19
Other assets	86		86
Total Assets	9,939	(23)	9,916
Short-term debt	8		8
Asset-backed securities issued Sequoia	6,946		6,946
Asset-backed securities issued Acacia	3,383	(1,490)	1,893
Long-term debt	150		150
Other liabilities	170		170
Total liabilities	10,657	(1,490)	9,167
Common stock and additional paid-in capital	1,108		1,108
Accumulated other comprehensive (loss) income	(574)	458	(116)
Retained earnings	(1,252)	1,009	(243)
Total stockholders (deficit) equity	(718)	1,467	749
Total Liabilities and Stockholders Equity	\$ 9,939	\$ (23)	\$ 9,916

As of December 31, 2008, the loans at Acacia had an aggregate fair value of \$12 million and an unpaid principal balance of \$27 million, and asset-backed securities issued at Acacia had an aggregate fair value of \$347 million and an unpaid principal balance of \$3.1 billion.

We did not elect the fair value option for any financial instruments that were acquired subsequent to our initial adoption of FAS 159 on January 1, 2008. We did elect the fair value option for certain ABS issued by Sequoia and acquired by Acacia as a result of the deconsolidation of certain Sequoia entities during the fourth quarter of 2008. These ABS issued had been previously eliminated as intercompany assets for financial reporting purposes due to the consolidation of Sequoia entities. Upon recognition of these ABS, we recorded a \$7 million negative market valuation adjustment through the income statement in accordance with our election to adopt FAS 159 for all securities at Acacia.

REDWOOD TRUST, INC. AND SUBSIDIARIES

NOTES TO FINANCIAL STATEMENTS December 31, 2008

Note 5. Fair Value of Financial Instruments

We adopted FAS 157 on January 1, 2008. FAS 157 defines fair value, establishes a hierarchy of information used in measuring fair value, and enhances the disclosure of information about fair value measurements. FAS 157 provides that the exit price should be used to value an asset or liability, which is the price at which an asset could be sold or a liability could be transferred in an orderly process that is not a forced liquidation or distressed sale at the measurement date. FAS 157 also provides that relevant market data, to the extent available, and not internally generated or entity specific information should be used to determine fair value. The financial impact on Redwood from the adoption of FAS 157 was not significant since our valuation methodology used in prior periods did not need to be revised to comply with the new standard.

The following table presents the carrying values and estimated fair values of assets and liabilities that are required to be recorded or disclosed at fair value as of December 31, 2008 and 2007.

(In Thousands)	December 31, 2008		December 31, 2007	
	Carrying Value	Fair Value	Carrying Value	Fair Value
Assets				
Real estate loans (held-for-investment)	\$4,644,735	\$2,618,323	\$7,199,618	\$6,860,574

Long-term debt	150,000	41,628	150,000	94,000

FAS 157 requires us to estimate and disclose fair values based on the following three-level hierarchy that prioritizes market inputs.

- Level 1:** Observable inputs that reflect quoted prices (unadjusted) for identical assets or liabilities in active markets.
- Level 2:** Inputs other than quoted prices included in Level 1 that are observable for the asset or liability either directly or through corroboration with observable market data.
- Level 3:** Unobservable inputs (e.g., an entity's own data or assumptions).

REDWOOD TRUST, INC. AND SUBSIDIARIES

NOTES TO FINANCIAL STATEMENTS December 31, 2008

Note 5. Fair Value of Financial Instruments (continued)

Level 3 inputs include unobservable inputs that are used when there is little, if any, market activity for the asset or liability measured at fair value. In certain cases, the inputs used to measure fair value fall into different levels of the fair value hierarchy. In such cases, the level in which the fair value measurement in its entirety falls is determined based on the lowest level input that is significant to the fair value measurement. Our assessment of the significance of a particular input requires judgment and considers factors specific to the asset or liability being measured.

The following table presents assets and liabilities recorded at fair value on our consolidated balance sheet on a recurring basis and indicates the fair value hierarchy of the valuation techniques used to measure fair value.

Assets and Liabilities Measured at Fair Value on a Recurring Basis as of December 31, 2008

TABLE OF CONTENTS

REDWOOD TRUST, INC. AND SUBSIDIARIES

NOTES TO FINANCIAL STATEMENTS December 31, 2008

Note 5. Fair Value of Financial Instruments (continued)

The following is a description of the instruments measured at fair value under FAS 157 as well as the general classification of such instruments pursuant to the valuation hierarchy described above under FAS 157.

Real estate loans

Residential real estate loan fair values are determined by available market quotes and discounted cash flow analyses (Level 3).

Commercial real estate loan fair values are determined by available market quotes and discounted cash flow analyses (Level 3).

Real estate securities

Real estate securities are residential, commercial, CDO, and other asset-backed securities that are illiquid in nature and trade infrequently. Fair values are determined by discounted cash flow analyses and other valuation techniques using market pricing assumptions that are confirmed by third party dealer/pricing indications, to the extent available. Significant inputs in the valuation analysis are predominantly Level 3 in nature, due to the lack of readily available market quotes and related inputs. Relevant market indicators that are factored in the analyses include bid/ask spreads,

credit losses, interest rates, and prepayment speeds. Estimated fair values are based on applying the market indicators to generate discounted cash flows (Level 3).

Other investments

Other investments currently include a GIC. Management considers the GIC's fair value to approximate its contract value, as the GIC earns a variable interest rate of LIBOR less 5 basis points and resets on a monthly basis (Level 2).

Derivative assets and liabilities

Our derivative instruments include interest rate agreements and credit default swaps. Fair values of derivative instruments are determined using valuation models and are verified by valuations provided by dealers active in derivative markets. Valuation models require a variety of inputs, including contractual terms, market prices, yield curves, credit curves, measures of volatility, prepayment rates, and correlations of such inputs. Model inputs for interest rate agreements can generally be verified and model selection does not involve significant management judgment (Level 2). For other derivatives, valuations are based on various factors such as liquidity, bid/offer spreads, and credit considerations for which we rely on available market evidence. In the absence of such evidence, management's best estimate is used (Level 3).

Cash and cash equivalents

Cash and cash equivalents include cash on hand and highly liquid investments with original maturities of three months or less. Fair values equal carrying values.

Restricted cash

Restricted cash primarily includes interest-earning cash balances in ABS entities and the Fund for the purpose of distribution to bondholders or limited partners, and reinvestment. Due to the short-term nature of the restrictions, fair values approximate carrying values.

Accrued interest receivable and payable

Accrued interest receivable and payable includes interest due on our assets and payable on our liabilities. Due to the short-term nature of when these interest payments will be received or paid, fair values approximate carrying values.

F-27

TABLE OF CONTENTS

REDWOOD TRUST, INC. AND SUBSIDIARIES

NOTES TO FINANCIAL STATEMENTS
December 31, 2008

Note 5. Fair Value of Financial Instruments (continued)

Short-term debt

Short-term debt includes our credit facilities that mature within one year. Short-term debt is set to an adjustable rate. Fair values approximate carrying values.

ABS issued

ABS issued includes asset-backed securities issued through our Sequoia and Acacia programs. These instruments are illiquid in nature and trade infrequently, if at all. Fair values are determined by discounted cash flow analyses and other valuation techniques using market pricing assumptions that are confirmed by third party dealer/pricing indications, to the extent available. Significant inputs in the valuation analysis are predominantly Level 3, due to the nature of these instruments and the lack of readily available market quotes. Relevant market indicators factored into the analyses include dealer price indications to the extent available, bid/ask spreads, external spreads, collateral credit losses, interest rates and collateral prepayment speeds. Estimated fair values are based on applying the market indicators to generate discounted cash flows (Level 3).

Long-term debt

Long-term debt includes our subordinated notes and trust preferred securities. Fair values are determined using comparable market indicators of current pricing. Significant inputs in the valuation analysis are predominantly Level 3 due to the nature of these instruments and the lack of readily available market quotes.

Real estate owned

Real estate owned includes properties owned in satisfaction of foreclosed loans. Fair values are determined using available market quotes, appraisals, broker price opinions, comparable properties, or other indications of value (Level 3).

Note 6. Real Estate Loans

We invest in residential and commercial real estate loans that we acquire from third party originators. We finance these loans through a combination of debt and equity as well as through in the Sequoia and Acacia entities that we sponsor.

The following table summarizes the classifications and carrying value of the residential and commercial real estate loans reported on our consolidated balance sheets at December 31, 2008 and 2007.

(In Thousands)	December 31,	
	2008	2007
Residential real estate loans (held-for-sale)	\$ 2,624	\$ 4,533
Residential real estate loans (held-for-investment)	4,644,486	7,173,940
Commercial real estate loans (fair value)	11,977	
Commercial real estate loans (held-for-investment)	249	25,678
Total Real Estate Loans	\$ 4,659,336	\$ 7,204,151

Residential Real Estate Loans Held-for-Sale

Residential real estate loans held-for-sale are owned with equity. None of these loans were pledged as collateral for Redwood debt as of December 31, 2008 or 2007. At December 31, 2008, there were 15 residential loans held-for-sale with \$5 million in outstanding principal value and a lower of cost or fair value

F-28

TABLE OF CONTENTS

REDWOOD TRUST, INC. AND SUBSIDIARIES

NOTES TO FINANCIAL STATEMENTS December 31, 2008

Note 6. Real Estate Loans (continued)

of \$3 million. At December 31, 2007, there were 18 residential loans held-for-sale with \$6 million in outstanding principal value and a lower of cost or fair value of \$5 million.

Residential Real Estate Loans Held-for-Investment

Residential real estate loans held-for-investment at December 31, 2008 and 2007, are owned at Sequoia entities that we consolidate for financial reporting purposes. The following table provides additional information on residential real estate loans held-for-investment at December 31, 2008 and 2007.

Residential Real Estate Loans Held-for-Investment

(In Thousands)	December 31,	
	2008	2007
Principal value	\$4,612,564	\$7,106,018
Unamortized premium (discount), net	67,635	86,204
Discount designated as credit reserve		
Allowance for loan losses	(35,713)	(18,282)
Carrying Value	\$4,644,486	\$7,173,940

Of the \$4.6 billion of principal face and \$68 million of unamortized premium on these loans at December 31, 2008, \$2.0 billion of principal face and \$48 million of unamortized premium relates to residential loans acquired prior to July 1, 2004. During 2008, 20% of these residential loans prepaid and we amortized 27% of the premium based upon the accounting elections we apply. For residential loans acquired after July 1, 2004, the principal face was \$2.6 billion and the unamortized premium was \$20 million at December 31, 2008. During 2008, 16% of these residential loans prepaid and we amortized 19% of the premium.

Of the \$7.1 billion of principal face and \$86 million of unamortized premium on our residential real estate loans held-for-investment at December 31, 2007, \$2.5 billion of principal face and \$66 million of unamortized premium relates to residential loans acquired prior to July 1, 2004, and \$4.6 billion of principal face and \$20 million of unamortized premium relates to residential loans acquired after July 1, 2004.

Sale of Sequoia Interests and Resulting Deconsolidation

During the fourth quarter of 2008, we sold variable interests in certain Sequoia securitizations issued during 2007 and determined that upon completion of a FAS 140 and FIN 46(R) accounting analysis we should derecognize the associated assets and liabilities of these secured borrowings for financial reporting purposes. We deconsolidated \$1.3 billion of real estate loans and other assets and \$1.3 billion of ABS issued and other liabilities, for a net realized gain of \$12 million. As a result of these transactions, we were required to recognize certain ABS issued by Sequoia and owned by Acacia entities. These ABS issued had been previously eliminated upon consolidation for financial reporting purposes. We recognized a \$7 million negative market valuation adjustment related to these Sequoia ABS issued in accordance with our election to adopt FAS 159 for all assets at Acacia. We also recognized less than \$1 million of other offsetting positive adjustments. The net effect of all transactions associated with this deconsolidation was a \$5 million increase in realized gains on sales and calls, net, which was recorded to our consolidated statement of (loss) income as of December 31, 2008. We maintained our intent to hold our economic interests in all remaining consolidated Sequoia entities at December 31, 2008.

North Carolina	3	%	2	%
Other states (none greater than 3%)	26	%	26	%
Total	100	%	100	%

Commercial Real Estate Loans at Fair Value

Commercial real estate loans at fair value are owned at Acacia entities that we consolidate for financial reporting purposes. On January 1, 2008, we elected the fair value option under FAS 159 for loans at Acacia and record them at their estimated fair values. Prior to 2008, these loans were classified as held-for-investment. At December 31, 2008, there were five commercial loans at fair value, none of which are delinquent, with an outstanding principal value of \$27 million and a fair value of \$12 million.

Commercial Real Estate Loans Held-for-Investment

Commercial real estate loans held-for-investment are owned with equity. None of these loans were pledged as collateral for debt as of December 31, 2008 or 2007. The following table provides additional information on commercial real estate loans held-for-investment as of December 31, 2008 and 2007.

Commercial Real Estate Loans Held-for-Investment

(In Thousands)	December 31,	
	2008	2007

Principal value	\$ 11,098	\$ 38,111
Unamortized discount, net	(360)	(1,944)
Discount designated as credit reserve	(8,141)	(8,141)
Allowance for loan losses	(2,348)	(2,348)
Carrying Value	\$ 249	\$ 25,678

At December 31, 2008, there were two commercial loans held-for-investment with \$11 million in outstanding principal value and a carrying value of \$0.2 million. During the first quarter of 2007, we fully reserved for an anticipated loss on a \$10 million mezzanine commercial loan, which was originated to finance a condominium-conversion project. We do not expect to recover any outstanding principal upon completion and sale of the condominium units, and thus maintained the reserve as of December 31, 2008.

F-32

TABLE OF CONTENTS

REDWOOD TRUST, INC. AND SUBSIDIARIES

NOTES TO FINANCIAL STATEMENTS December 31, 2008

Note 7. Allowance for Loan Losses (continued)

During the fourth quarter of 2008, we sold our interests in certain Sequoia entities and derecognized the loans owned by those entities from our consolidated balance sheets (See *Note 6*). This resulted in the derecognition of \$1.3 billion of loans held-for-investment and \$22 million of associated allowances for loan losses.

Serious delinquencies on consolidated Sequoia loans were \$120 million and \$68 million as of December 31, 2008 and 2007, respectively. Serious delinquencies include loans delinquent more than 90 days and in foreclosure. As a percentage of current loan balances, serious delinquencies were 2.61% and 0.96% at December 31, 2008 and 2007, respectively.

When we pursue foreclosure in full satisfaction for a defaulted loan, we estimate the specific loan loss, if any, based on estimated net proceeds from the sale of the property (including accrued but unpaid interest and other costs), and charge this specific estimated loss against the allowance for loan losses. During 2008, there were \$15 million of

charge-offs that reduced our allowance for loan losses. These charge-offs arose from \$55 million of defaulted loan principal. Foreclosed property is subsequently recorded as REO, a component of other assets. Subsequent changes in the value of an REO property below its cost basis flow through market valuation adjustments, net, in our consolidated statements of (loss) income. We had \$6 million of negative market valuation adjustments during 2008 stemming from a decrease in the fair value of REO.

Activity in the Allowance for Losses on Commercial Loans

The following table summarizes the activity in the allowance for credit losses for our commercial loans for the years ended December 31, 2008, 2007, and 2006.

(In Thousands)	Year Ended December 31,		
	2008	2007	2006
Balance at beginning of period	\$ 2,348	\$	\$
Provision for credit losses		2,348	35
Charge-offs			(35)
Balance at End of period	\$ 2,348	\$ 2,348	\$

Note 8. Real Estate Securities

We invest in third party residential, commercial, and CDO securities. The following table presents the fair values of our real estate securities by collateral type and entity as of December 31, 2008 and 2007.

December 31, 2008 (In Thousands)	Redwood	The Fund	Acacia	Total Securities

When we purchase a credit-sensitive AFS security at a significant discount to its face value, we often do not amortize into income a significant portion of this discount that we are entitled to earn but do not expect to collect due to the inherent credit risk of the security. We may also expense a portion of our investment in the security to the extent we believe that principal losses will exceed the discount. The amount of principal face that we do not amortize into income is designated as a credit reserve on the security, with net unamortized discounts or premiums amortized into income over time using the interest method in accordance with EITF 99-20.

The following table presents the changes for the years ended December 31, 2008 and 2007, of the unamortized discount and designated credit reserves on AFS securities.

Changes in Unamortized Discount and Designated Credit Reserves on AFS Securities

TABLE OF CONTENTS**REDWOOD TRUST, INC. AND SUBSIDIARIES****NOTES TO FINANCIAL STATEMENTS
December 31, 2008****Note 8. Real Estate Securities (continued)**

The loans underlying our residential CES totaled \$128 billion at December 31, 2008, and consist of \$99 billion prime and \$29 billion non-prime loans. These loans are located nationwide with a large concentration in California (48%).

Serious delinquencies (90+ days, in foreclosure or REO) at December 31, 2008 were 5.25% of current principal balances. For loans in prime pools, serious delinquencies were 1.70% of current balances. For loans in non-prime pools, serious delinquencies were 17.06% of current balances.

The loans underlying our commercial CES totaled \$49 billion at December 31, 2008, and consist primarily of office (39%), retail (28%), and multifamily (16%) commercial loans. These loans are located nationwide. Serious delinquencies (60+ days and in foreclosure or REO) at December 31, 2008 were 1.15% of current principal balances.

The following table presents the components comprising the carrying value of AFS securities that were in an unrealized loss position and not deemed to be other than temporarily impaired as of December 31, 2008 and 2007.

TABLE OF CONTENTS

REDWOOD TRUST, INC. AND SUBSIDIARIES

NOTES TO FINANCIAL STATEMENTS December 31, 2008

Note 8. Real Estate Securities (continued)

At December 31, 2008, our consolidated balances sheets included 594 AFS securities, of which 194 were in an unrealized loss position and none were in an unrealized loss position for twelve consecutive months or longer. At

December 31, 2007, our consolidated balances sheets included 1,722 AFS securities, of which 855 were in an unrealized loss position and 188 were in a continuous loss position for twelve months or longer. The number of AFS securities reported on our consolidated balance sheets declined as a result of our adoption of FAS 159 on January 1, 2008.

For the year ended December 31, 2008, we recognized other-than-temporary impairments on AFS securities of \$373 million, through market valuation adjustments, net, in our consolidated statements of (loss) income. For the year ended December 31, 2007, we recognized other-than-temporary impairments of \$1.2 billion.

Gross Realized Gains and Losses

Gains and losses from the sale of AFS securities are recorded to realized gains (losses) on sales and calls, net, in our consolidated statements of (loss) income. The following table presents the gross realized gains and losses on sales and calls of AFS securities for the years ended December 31, 2008, 2007, and 2006.

(In Thousands)	Year Ended December 31,		
	2008	2007	2006
Gross realized gains sales	\$ 1,948	\$ 3,486	\$ 13,546
Gross realized gains calls	42	5,311	2,980
Gross realized losses sales	(47)	(9,633)	(2,341)
Gross realized losses calls	(93)		
Total Realized Gains (Losses) on Sales and Calls, Net	\$ 1,850	\$ (836)	\$ 14,185

Note 9. Other Investments

Other investments include a GIC owned by an Acacia securitization entity and recorded on our consolidated balance sheets at its estimated fair value. This GIC represents a deposit certificate issued by a rated investment bank and serves as collateral to cover realized losses on CDS entered into by this same Acacia entity. The CDS initially referenced A and BBB-rated residential mortgage-backed securities issued in 2006. The fair value of the GIC was \$78 million as of December 31, 2008, which is equal to its carrying value. The GIC has been drawn down by \$2 million

since its acquisition to cover credit losses on the referenced securities.

Note 10. Derivative Financial Instruments

We report our derivative financial instruments at fair value as determined using third-party models and confirmed by broker/dealers that make markets in these instruments.

F-37

TABLE OF CONTENTS

NOTES TO FINANCIAL STATEMENTS December 31, 2008

Note 10. Derivative Financial Instruments (continued)

The following table shows the aggregate fair value and notional amount of our derivative financial instruments as of December 31, 2008 and 2007.

(In Thousands)	December 31, 2008		December 31, 2007	
	Fair Value	Notional Amount	Fair Value	Notional Amount
Trading Instruments				
Interest rate caps purchased	\$ 1,683	\$ 714,400	\$ 3,788	\$ 707,900
Interest rate caps sold	(1,084)	250,000	(1,061)	250,000
Interest rate corridors purchased				844,805
Interest rate swaps	(97,226)	1,013,781	(1,553)	186,733
Interest rate swaps designated as cash flow hedges			(19,564)	994,562
Credit default swaps	(77,892)	78,206	(57,397)	78,771
Total Derivative Financial Instruments	\$ (174,519)	\$ 2,056,387	\$ (75,787)	\$ 3,062,771

Of the negative \$175 million value of derivative financial instruments at December 31, 2008, \$3 million was recorded as derivative assets and \$178 million was recorded as derivative liabilities on our consolidated balance sheet. Of the negative \$76 million value of derivative financial instruments at December 31, 2007, \$5 million was recorded as derivative assets and \$81 million was recorded as derivative liabilities on our consolidated balance sheet.

Interest Rate Agreements

We currently account for our interest rate agreements as trading instruments in accordance with FAS 133. Changes in the fair value of the interest rate agreements and all associated income and expenses are reported in our consolidated statements of (loss) income through market valuation adjustments, net. We had net valuation adjustments on interest rate agreements of negative \$91 million for the year ended December 31, 2008, and negative \$4 million for the year ended December 31, 2007.

We did not have any interest rate agreements designated as cash flow hedges during the year ended December 31, 2008. For interest rate agreements previously designated as cash flow hedges, our total unrealized gain or loss included in accumulated other comprehensive (loss) income was negative \$27 million at December 31, 2008 and was negative \$33 million at December 31, 2007.

The following table presents the interest income and expense of our interest rate agreements previously designated as cash flow hedges for the years ended December 31, 2008, 2007, and 2006.

Impact on Net Interest (Expense) Income of Our Interest Rate Agreements Accounted for as Cash Flow Hedges

(In Thousands)	Year Ended December 31,		
	2008	2007	2006
Net interest income on cash flow interest rate agreements	\$	\$ 8,987	\$ 12,117
Realized net income due to net ineffective portion of hedges		183	435
Realized net losses reclassified from other comprehensive (loss) income	(5,686)	(913)	(80)
Total (Expense) Income	\$(5,686)	\$ 8,257	\$ 12,472

TABLE OF CONTENTS

REDWOOD TRUST, INC. AND SUBSIDIARIES

NOTES TO FINANCIAL STATEMENTS December 31, 2008

Note 10. Derivative Financial Instruments (continued)

Credit Derivatives

All of our existing credit default swaps (CDS) contracts were initiated during 2007 by an Acacia securitization entity that we have consolidated for financial reporting purposes. As the seller of these contracts we receive a fixed-rate premium and have assumed the credit risk of the reference securities.

These CDS are accounted for as trading instruments. The estimated fair values of these contracts fluctuate for a variety of reasons, such as the likelihood or occurrence of a specific credit event, the market perception of default risk and counterparty risk, and supply and demand changes. A qualifying credit event, defined as an interest shortfall, a failure to pay principal or a distressed rating downgrade, may trigger Acacia as the seller of protection to compensate the counterparty. During the years ended December 31, 2008 and 2007, the fair value of these CDS decreased \$22 million and \$54 million, respectively, as the result of higher market premiums required for these types of instruments.

The following table presents the fair value of our CDS along with certain risk characteristics as of December 31, 2008. All of our CDS have expiration dates of greater than 15 years.

(Dollars in Thousands)	December 31, 2008	
	Fair Value	Maximum Payout/Notional Amount ⁽¹⁾
Credit rating of underlying referenced securities		
BB/B	\$ (9,943)	\$ 9,967
CCC/CC/C	(67,949)	68,239
Total	\$ (77,892)	\$ 78,206

A guaranteed investment contract (GIC) in the amount of \$78 million can be drawn upon by the CDS counterparty (1) if credit losses occur. The GIC is held on our consolidated balance sheet at fair value at December 31, 2008 which is equal to \$78 million.

Counterparty Credit Risk

We incur credit risk to the extent that counterparties to our derivative financial instruments do not perform their obligations under specified contractual agreements. If a derivative counterparty does not perform, we may not receive the proceeds to which we may be entitled under these agreements. To mitigate this risk, we enter into agreements that are either a) transacted on a national exchange or b) transacted with counterparties that are either i) designated by the Federal Reserve Bank of New York as a primary government dealer, ii) affiliates of primary government dealers, or iii) rated A or higher. We also attempt to transact with several different counterparties in order to reduce our specific counterparty exposure. We consider counterparty risk as part of our fair value assessments of all derivative financial instruments.

As of December 31, 2008, Redwood and its affiliates had nineteen International Swaps and Derivatives Association (ISDA) agreements with ten different bank counterparties. For open derivative positions at December 31, 2008, we were in compliance with all but one of the requirements of our ISDA counterparties. This had no impact to our financial statements or operations.

Note 11. Other Assets

Other assets as of December 31, 2008 and 2007 are summarized in the following table.

F-39

TABLE OF CONTENTS

REDWOOD TRUST, INC. AND SUBSIDIARIES

NOTES TO FINANCIAL STATEMENTS December 31, 2008

Note 11. Other Assets (continued)

Other Assets

(In Thousands)	December 31, 2008	December 31, 2007
Real estate owned (REO)	\$ 19,264	\$ 15,118
Fixed assets and leasehold improvements	5,103	5,666
Principal receivable	1,647	2,819
Income tax receivables	4,225	
Prepaid expenses	9,119	857
Other	4,584	773
Total Other Assets	\$ 43,942	\$ 25,233

Real estate owned (REO) consists of foreclosed properties received in full satisfaction of defaulted real estate loans.

The carrying value of REO at December 31, 2008, was \$19 million, of which \$38 million related to transfers into REO in 2008, offset by \$21 million of REO liquidations, \$8 million of negative market valuation adjustments, and \$5 million of reversal related to our deconsolidation of certain Sequoia entities during the fourth quarter of 2008. The carrying value of REO as of December 31, 2007 was \$15 million, of which \$14 million related to transfers into REO in 2007 and \$1 million from transfers in 2006.

The number of single-family properties owned by us at December 31, 2008, was 93, an increase of 15, from 78 owned at December 31, 2007. This 19% increase reflects the continued housing market downturn and inability of a growing number of borrowers to meet their repayment obligations. The states of Arizona and California accounted for 19% of our REO balance at December 31, 2008. The Midwest region accounted for an additional 39% of this total.

Note 12. Short-Term Debt

At December 31, 2008, we had no short-term debt outstanding. At December 31, 2007, our only use of short-term debt was to finance securities using an \$8 million master repurchase agreement that matured monthly. We had pledged \$9 million of securities to this facility.

Our outstanding short-term debt at December 31, 2008 and 2007 is presented in the table below.

(In Thousands)	December 31, 2008			December 31, 2007		
	Amount	Weighted Average Interest Rate	Weighted Average Days Until Maturity	Amount	Weighted Average Interest Rate	Weighted Average Days Until Maturity
Total short-term debt	\$			\$ 7,561	5.25 %	22

For the year ended December 31, 2008, the average balance of short-term debt was \$9 million, with a weighted-average interest cost of 3.63%. For the year ended December 31, 2007, the average balance of short-term debt was \$1.0 billion, with a weighted-average interest cost of 5.86%.

REDWOOD TRUST, INC. AND SUBSIDIARIES

NOTES TO FINANCIAL STATEMENTS December 31, 2008

Note 13. Asset-Backed Securities Issued

The Sequoia and Acacia securitization entities that we sponsor issue ABS to acquire assets from us and from third parties. Each series of ABS issued consists of various classes that pay interest on a monthly or quarterly basis.

Substantially all ABS issued pay variable rates of interest, which are indexed to one, three, or six-month LIBOR.

Some ABS issued pay fixed rates of interest or pay hybrid rates, which are fixed rates that subsequently adjust to variable rates. ABS issued also include some interest-only classes with coupons set at a fixed-rate or a fixed spread, or set at a spread to the interest rates earned on the assets, less the interest rates paid on the liabilities of a securitization entity.

The components of ABS issued by consolidated securitization entities we sponsor as of December 31, 2008 and 2007, along with other selected information, are summarized in the following table.

Asset-Backed Securities Issued

(In Thousands)	December 31, 2008			December 31, 2007		
	Sequoia	Acacia	Total	Sequoia	Acacia	Total
ABS issued Certificates with principal value	\$4,485,201	\$3,134,699	\$7,619,900	\$6,904,937	\$3,403,748	\$10,308,685
ABS issued Interest-only certificates	23,532		23,532	35,220		35,220
Unamortized premium	4,003		4,003	13,193		13,193
Unamortized discount	(4,609)		(4,609)	(7,184)	(20,635)	(27,819)
Market value discount		(2,787,768)	(2,787,768)			
Total ABS Issued	\$4,508,127	\$346,931	\$4,855,058	\$6,946,166	\$3,383,113	\$10,329,279
Range of weighted average interest rates, by series	1.65% to 5.93%	2.44% to 5.23%		4.42% to 6.14%	5.40% to 6.06%	
Stated maturities	2024 2047	2039 2052		2014 2047	2039 2052	
Number of series	37	10		38	10	

The maturity of each class of ABS issued is primarily determined by the rate of principal prepayments on the assets of the issuing entity. Each series is also subject to redemption (call) according to the specific terms of the respective governing documents. As a result, the actual maturity of ABS issued will often occur earlier than its stated maturity.

As of December 31, 2008, all of the \$4.9 billion reported value of ABS issued (\$7.6 billion principal value) had contractual maturities of over five years.

Amortization of Sequoia deferred ABS issuance costs were \$6 million and \$22 million for the years ended December 31, 2008 and 2007, respectively. During the fourth quarter of 2008, we derecognized \$1 million of Sequoia deferred bond issuance costs as a result of the sale of our variable interests in certain Sequoia entities and resulting deconsolidation.

On January 1, 2008, we elected to account for the ABS issued in Acacia at fair value under FAS 159. Prior to this election, Acacia ABS issued were carried at their unpaid principal balances, net of any unamortized discount or premium, and Acacia ABS deferred issuance costs were amortized as an adjustment to interest expense.

Note 14. Long-Term Debt

In 2006, we issued \$100 million of subordinated notes through Redwood Capital Trust I, a wholly-owned Delaware statutory trust, in a private placement transaction. These subordinated notes require quarterly distributions at a floating coupon rate equal to three-month LIBOR plus 2.25% until the notes are redeemed in whole, which will be no later than January 30, 2037. The weighted average interest rate on our subordinated notes was 5.47%. The earliest optional redemption date without penalty is January 30, 2012.

In 2007, we issued an additional \$50 million of subordinated notes, which require quarterly distributions at a floating interest rate equal to three-month LIBOR plus 2.25% until the notes are redeemed in whole, which will be no later than July 30, 2037. The earliest optional redemption date without a penalty is July 30, 2012.

At December 31, 2008 and 2007, the accrued interest payable balance on long-term Redwood debt was \$1 million and \$2 million, respectively.

Note 15. Commitments and Contingencies

As of December 31, 2008, we were obligated under non-cancelable operating leases with expiration dates through 2018 for \$14 million. The majority of the future lease obligations relates to a ten-year operating lease for our executive office that expires in 2013 and a lease for additional space that expires in 2018. The total payments required under these leases are recognized as office rent expense on a straight-line basis over the lease terms. Operating lease expense was \$2 million, \$1 million, and less than \$1 million for the years ended December 31, 2008, 2007, and 2006 respectively.

F-42

TABLE OF CONTENTS

REDWOOD TRUST, INC. AND SUBSIDIARIES

NOTES TO FINANCIAL STATEMENTS December 31, 2008

Note 15. Commitments and Contingencies (continued)

The following table presents our future lease commitments as of December 31, 2008.

Future Lease Commitments by Year

(In Thousands)

December

	31, 2008
2009	\$ 1,807
2010	1,709
2011	1,831
2012	1,882
2013	1,439
2014 and thereafter	5,253
Total	\$ 13,921

Leasehold improvements for our offices are amortized into expense over the ten-year lease term, expiring in 2013.

The unamortized leasehold improvement balance at both December 31, 2008 and 2007 was \$4 million.

At December 31, 2008, to our knowledge there were no legal proceedings to which we were a party or to which any of our properties was subject.

Note 16. Minority Interest

Minority interest represents the aggregate limited partnership (LP) interests in the Fund held by third parties. As of December 31, 2008, the minority interest was \$23 million, representing a 48% third party interest in the Fund. Income allocated to the minority interest is based on the third party LP ownership percentage. The ownership percentage is determined by dividing the number of units held by third party LP investors by the total units outstanding. Subsequent changes in our ownership percentage will be treated as capital transactions and result in a reallocation between shareholders equity and minority interest in our consolidated balance sheets.

Note 17. Stockholders Equity

The following table provides the basic and diluted (loss) earnings per share computations for the years ended December 31, 2008, 2007 and 2006.

Basic and Diluted (Loss) Earnings per Share

In Thousands, Except Share Data	Year Ended December 31,		
	2008	2007	2006
Net (loss) income	\$ (444,386)	\$ (1,108,637)	\$ 127,532
Basic weighted average shares outstanding	33,022,622	27,928,234	25,718,435
Net effect of dilutive stock options			595,391
Diluted weighted average shares outstanding	33,022,622	27,928,234	26,313,826
Basic (Loss) Earnings Per Share:	\$ (13.46)	\$ (39.70)	\$ 4.96
Diluted (Loss) Earnings Per Share:	\$ (13.46)	\$ (39.70)	\$ 4.85

For the years ended December 31, 2008 and 2007, there were no dilutive equity awards based on our reported net loss for these periods. For the year ended December 31, 2006, the number of outstanding equity shares that were dilutive totaled 595,391. For the years ended December 31, 2008, 2007, and 2006, the number of outstanding equity awards that were antidilutive totaled 1,214,756, 1,171,827, and 392,633, respectively. There were no other participating securities during these periods.

REDWOOD TRUST, INC. AND SUBSIDIARIES

NOTES TO FINANCIAL STATEMENTS December 31, 2008

Note 17. Stockholders Equity (continued)

Stock Repurchases

We announced a stock repurchase authorization in November 2007 for the repurchase of up to a total of 5,000,000 common shares. This plan replaced all previous share repurchase plans and has no expiration date. During the year ended December 31, 2008, we acquired 341,656 shares under this plan. As of December 31, 2008, there remained 4,658,344 shares available for repurchase under this plan.

Accumulated Other Comprehensive (Loss) Income

The following table provides a summary of the components of accumulated other comprehensive loss as of December 31, 2008 and 2007.

(In Thousands)	December 31,	
	2008	2007
Net unrealized loss on real estate securities	\$(37,702)	\$(541,153)
Reclassification of unrealized loss to minority interest	7,764	
Net unrealized loss on interest rate agreements accounted for as cash flow hedges	(26,927)	(32,613)
Total Accumulated Other Comprehensive Loss	\$(56,865)	\$(573,766)

At December 31, 2008, the net unrealized loss on AFS securities was \$38 million, as compared to a net unrealized loss of \$541 million at December 31, 2007. Upon our adoption of FAS 159 (for all securities in Acacia and IGS at Redwood) on January 1, 2008, net unrealized losses of \$458 million were reclassified from accumulated other comprehensive loss to retained earnings. During 2008, \$172 million of net unrealized loss was reclassified to earnings upon recognition of other-than-temporary impairments, and \$127 million of fair value declines in AFS with unrealized losses were recognized that were not deemed to be other-than-temporary (See *Note 8*). The net effect of these adjustments was a reduction in accumulated other comprehensive loss of \$45 million during the year.

On January 1, 2008, the interest rate agreements in Acacia entities were de-designated as cash flow hedges upon our adoption of FAS 159. At December 31, 2008, these agreements had an unrealized loss of \$31 million, which will be expensed through our consolidated statements of (loss) income over the remaining lives of designated Acacia ABS (See *Note 10*). During the years ended December 31, 2008 and 2007, \$6 million and \$1 million, respectively, of cash flow hedge unrealized loss were reclassified into interest expense.

REDWOOD TRUST, INC. AND SUBSIDIARIES

NOTES TO FINANCIAL STATEMENTS December 31, 2008

Note 18. Equity Compensation Plans

As of December 31, 2008, 2007, and 2006, 1,005,937, 493,646, and 514,217 shares of common stock, respectively, were available for grant under Redwood's Incentive Plan. The unrecognized future cost of nonvested awards totaled \$15 million at December 31, 2008, as shown in the following table.

(In Thousands)	Year Ended December 31, 2008				
	Stock Options	Restricted Stock	Deferred Stock Units	Employee Stock Purchase Program	Total
Unrecognized compensation cost at beginning of period	\$500	\$ 393	\$8,138	\$	\$9,031
Equity grants	187	879	17,348	234	18,648
Equity compensation cost	(687)	(571)	(10,772)	(234)	(12,264)
Unrecognized Compensation Cost at End of Period	\$	\$ 701	\$14,714	\$	\$15,415

The weighted average amortization period remaining for all of our equity awards was one year at December 31, 2008.

Stock Options

The following table summarizes the activity related to stock options for the years ended December 31, 2008, 2007, and 2006.

Stock Options Activity

	2008		2007		2006	
	Shares	Weighted Average Exercise Price	Shares	Weighted Average Exercise Price	Shares	Weighted Average Exercise Price

TABLE OF CONTENTS**REDWOOD TRUST, INC. AND SUBSIDIARIES**

NOTES TO FINANCIAL STATEMENTS
December 31, 2008

Note 18. Equity Compensation Plans (continued)

As of December 31, 2008, there was no unrecognized compensation cost related to unvested stock options. Expenses related to stock options were less than \$1 million, \$2 million, and \$2 million for the years ended December 31, 2008, 2007, and 2006, respectively. The total intrinsic value of the options outstanding and exercisable was less than \$1 million, \$7 million, and \$25 million at December 31, 2008, 2007, and 2006, respectively.

The total intrinsic value or gain (fair value less exercise price) for options exercised was \$0.7 million, \$4 million, and \$13 million for the years ended December 31, 2008, 2007, and 2006, respectively. The net cash proceeds received from the exercise of stock options were \$0.8 million and \$0.6 million for the years ended December 31, 2008 and 2007, respectively. During 2006, within the guidelines of the Incentive Plan, officers exercised 495,168 stock options and surrendered 368,845 shares to pay exercise costs and taxes of \$21 million on the gains on the options exercised. This resulted in tax payments by Redwood on the officer stock option exercises of \$4.3 million that were in excess of stock option proceeds received of \$2.6 million during 2006.

As of December 31, 2008, 2007, and 2006, there were unvested stock options of 2,676, 41,182, and 148,879, respectively.

The following table describes the weighted average assumptions used for calculating the value of options granted for the years ended December 31, 2007 and 2006. There were no stock options granted during 2008.

**Weighted Average Assumptions Used for Valuation of Options Under FAS
123R Granted During Period**

	2008	2007	2006
Stock price volatility		25.52 %	25.44 %
Risk free rate of return (5 yr Treasury Rate)		4.58 %	4.61 %
Average life		6 years	6 years
Dividend yield		10.00 %	10.00 %

The following table summarizes information about outstanding and exercisable stock options at December 31, 2008.

Outstanding Stock Options as of December 31, 2008

Range of Exercise Prices	Options Outstanding			Options Exercisable		
	Number Outstanding	Weighted-Average Remaining Contractual Life	Weighted-Average Exercise Price	Number Exercisable	Weighted-Average Exercise Price	
\$0 to \$20	185,750	1.06	\$ 12.74	185,750	\$ 12.74

F-46

TABLE OF CONTENTS**REDWOOD TRUST, INC. AND SUBSIDIARIES****NOTES TO FINANCIAL STATEMENTS
December 31, 2008****Note 18. Equity Compensation Plans (continued)****Restricted Stock**

The following table summarizes the activity related to restricted stock for the years ended December 31, 2008, 2007, and 2006.

Restricted Stock Outstanding

	2008		2007		2006	
	Shares	Weighted Average Grant Date Fair Market Value	Shares	Weighted Average Grant Date Fair Market Value	Shares	Weighted Average Grant Date Fair Market Value
Outstanding at beginning of period	17,646	\$ 50.15	27,524	\$ 49.57	21,038	\$ 45.96
Granted	56,252	23.61			10,958	55.83
Vested	(5,543)	49.52	(5,120)	47.33	(1,722)	52.31
Forfeited	(15,113)	37.45	(4,758)	49.86	(2,750)	45.16
Outstanding at End of Period	53,242	\$ 25.78	17,646	\$ 50.15	27,524	\$ 49.57

We generally grant restricted stock as part of compensation in the fourth quarter. However, the 2007 annual grants were awarded in the first quarter of 2008, and the 2008 grants were awarded in the fourth quarter of 2008. Restrictions on shares of restricted stock outstanding lapse through 2013.

For each of the years ended December 31, 2008, 2007, and 2006, the expenses related to restricted stock were less than \$1 million. As of December 31, 2008, there was less than \$1 million of unrecognized compensation cost related to unvested restricted stock. This cost will be recognized over a weighted average period of one year.

Deferred Stock Units

The following table summarizes the activity related to DSUs for the years ended December 31, 2008, 2007, and 2006.

Deferred Stock Units Activity

(In Thousands, Except Unit Amounts)	2008			2007			2006		
	Units	Fair Market Value	Weighted Average Grant Date Fair Market Value	Units	Fair Market Value	Weighted Average Grant Date Fair Market Value	Units	Fair Market Value	Weighted Average Grant Date Fair Market Value
Outstanding at beginning of period	709,848	\$24,305	\$48.69	737,740	\$42,848	\$48.91	418,126	\$17,252	\$45.65

Distributions	(64,820)	(3,213)	49.57	(50,499)	(2,368)	46.90	(11,471)	(347)	30.27
Change in valuation		(16,437)			(17,022)			8,600	
Forfeitures	(15,451)	(699)	45.24	(22,393)	(1,200)	53.60			
Balance at End of Period	1,730,531	\$25,802	\$30.33	709,848	\$24,305	\$48.69	737,740	\$42,848	\$48.91

We generally grant DSUs annually as part of compensation in the fourth quarter. However, the 2007 annual grants were awarded in the first quarter of 2008, and the 2008 annual grants were awarded in the fourth quarter of 2008. Vesting on DSUs lapse through 2013.

TABLE OF CONTENTS

REDWOOD TRUST, INC. AND SUBSIDIARIES

NOTES TO FINANCIAL STATEMENTS December 31, 2008

Note 18. Equity Compensation Plans (continued)

As of December 31, 2008, there was \$15 million of unrecognized compensation cost related to unvested DSUs. Expenses related to DSUs were \$11 million, \$12 million, and \$9 million for the years ended December 31, 2008, 2007, and 2006, respectively. This cost will be recognized over a weighted-average period of one year. As of December 31, 2008, 2007, and 2006, the number of outstanding DSUs that had vested was 522,826, 301,406, and 153,073, respectively.

As of December 31, 2008, 2007, and 2006, the number of outstanding DSUs that were unvested was 1,207,705, 408,442, and 584,667, respectively. The weighted-average grant-date fair value of these unvested DSUs was \$23.82, \$50.76, and \$49.65 as of December 31, 2008, 2007, and 2006, respectively.

Of the \$11 million of expenses related to DSUs in 2008, \$1 million was due to the modification and resulting acceleration of vesting on 101,128 DSUs related to the retirement of an officer. This \$1 million modification expense was offset by a \$2 million credit for excess expenses that had been recorded in prior periods on these unvested DSU grants. Of the \$12 million of expenses related to DSUs in 2007, \$1 million related to the modification and resulting acceleration of vesting on 61,482 DSUs related to the severance of two employees. No such modifications occurred in 2006.

Employee Stock Purchase Plan

The ESPP allows a maximum of 100,000 shares of common stock to be purchased in aggregate for all employees. As of December 31, 2008, 2007, and 2006, 67,306, 48,302, and 35,570 shares have been purchased, respectively, and there remained a negligible amount of uninvested employee contributions in the ESPP at December 31, 2008.

The following table summarizes the activity related to the ESPP.

Employee Stock Purchase Plan Activity

(In Thousands)	2008	2007	2006
Balance at beginning of period	\$	\$ 3	\$ 13
Employee purchases	401	465	414
Cost of common stock issued	(379)	(468)	(424)
Balance at End of Period	\$ 22	\$	\$ 3

Executive Deferred Compensation Plan

The following table summarizes the activity related to the EDCP for the years ended December 31, 2008, 2007, and 2006.

EDCP Cash Accounts Activity

(In Thousands)	2008	2007	2006
Balance at beginning of period	\$ 9,071	\$ 9,693	\$ 7,005
New deferrals	2,582	1,951	3,785
Accrued interest	460	984	1,023
Withdrawals	(4,506)	(3,557)	(2,120)
Balance at End of Period	\$ 7,607	\$ 9,071	\$ 9,693

Deferrals were made to the cash accounts of the EDCP of \$3 million, \$2 million, and \$4 million for the years ended December 31, 2008, 2007, and 2006, respectively.

F-48

Total compensation expense	34,691	35,535	33,078
Systems	8,831	9,547	7,947
Due diligence	59	1,080	4,035
Office costs	7,201	5,200	4,278
Accounting and legal	8,013	3,674	3,533
Other operating expenses	3,299	3,519	3,054
Total Operating Expenses	\$ 62,094	\$ 58,555	\$ 55,925

Note 20. Taxes

During the third quarter of 2008, our Board of Directors decided to distribute as dividends 100% of our REIT taxable income generated in 2007 and 2008. We had previously elected to retain up to 10% of our REIT ordinary taxable income and had provisioned for corporate income taxes on the retained income while maintaining our REIT status. As a result of this change, we recognized a net tax provision reversal of \$8 million related to our 2007 provision for income taxes for the year ended December 31, 2008. We recognized a total tax benefit of \$3 million for the year ended December 31, 2008, and a total tax provision of \$5 million and \$10 million for the years ended December 31, 2007 and 2006, respectively.

F-49

TABLE OF CONTENTS

REDWOOD TRUST, INC. AND SUBSIDIARIES

NOTES TO FINANCIAL STATEMENTS December 31, 2008

Note 20. Taxes (continued)

The following table summarizes the tax (benefit) provision for the years ended December 31, 2008, 2007, and 2006.

(Benefit from) Provision for Income Taxes

(In Thousands)	2008	2007	2006
Current tax (benefit) provision:			
Federal	\$ (6,608)	\$ 6,421	\$ 8,042
State	(1,869)	2,168	2,021
Total current tax (benefit) provision	\$ (8,477)	\$ 8,589	\$ 10,063
Deferred tax provision (benefit):			
Taxable subsidiaries	\$ 5,267	\$ (3,397)	\$ (93)
Total deferred tax provision (benefit)	5,267	(3,397)	(93)
Total (Benefit from) Provision for Income Taxes	\$ (3,210)	\$ 5,192	\$ 9,970

Over the course of the year we provided estimates of our effective tax rates based on our projections of annual GAAP and taxable income. These projections are based on many assumptions of events that may happen and may exclude events that actually do occur. Thus, actual results, and our estimated effective tax rates reported each quarter, may change as a function of actual results and revised projections.

Our taxable income before dividend distributions has been higher than our GAAP net (loss) income primarily due to the accounting for credit losses and the market valuation write-downs taken on our assets for GAAP but not for tax. These differences resulted in net losses for GAAP during recent periods, while taxable income remained positive. In 2008 and 2007, negative market valuation adjustments for GAAP were significant and we reported a GAAP net loss, while reporting taxable income. As a result, the impact in 2008 and 2007 on the effective tax rate of the dividends paid deduction is an increase in the effective tax rate. Generally, our dividend distributions reduce our effective tax rate as

was the case in 2006 when we reported positive GAAP net income.

The following is a reconciliation of the statutory federal and state rates to the effective rates, for the years ended December 31, 2008, 2007, and 2006.

Reconciliation of Statutory Tax Rate to Effective Tax Rate

	2008		2007		2006	
Federal statutory rate	34.0	%	35.0	%	35.0	%
State statutory rate, net of Federal tax effect	7.2	%	7.0	%	7.0	%
Differences in taxable income from GAAP (loss) income	(43.3	)%	(48.0	)%	11.7	%
2007 net tax provision reversal	0.7	%				
Dividends paid deduction	2.1	%	5.5	%	(46.4	)%
Effective Tax Rate	0.7	%	(0.5	)%	7.3	%

Realization of the deferred tax asset is dependent on many factors including generating sufficient taxable income prior to the expirations of net operating loss (NOL) carry forwards and generating sufficient capital gains in future periods prior to the expiration of capital loss carry overs. Although realization is not assured, we believe it is more likely than not that most of the deferred tax asset, net of the valuation allowance, will be realized. The amount of the deferred tax asset considered realizable, however, could be reduced if actual or revised estimates of future taxable income during the carry forward periods are lower than currently expected. Our deferred tax asset valuation allowance increased during 2008 due to the uncertainty of generating

F-50

TABLE OF CONTENTS

REDWOOD TRUST, INC. AND SUBSIDIARIES

NOTES TO FINANCIAL STATEMENTS December 31, 2008

Note 20. Taxes (continued)

sufficient capital gains or taxable income at our taxable subsidiaries in future periods. As of December 31, 2008 and 2007, our taxable subsidiaries had net deferred tax assets as presented in the table below.

Deferred Tax Assets

(In Thousands)	December 31, 2008	December 31, 2007
Net operating loss carry forward state	\$ 4,156	\$ 196
Net capital loss carry forward state	4,429	
Net operating loss carry forward federal		326

Capital loss carry over	7,116	1,743
Real estate assets	5,680	9,115
Gains from Sequoia securitizations		513
Interest rate agreements	1,385	880
Other	304	164
Total net deferred tax assets	23,070	12,937
Valuation allowance	(19,462)	(4,062)
Total benefited deferred tax assets through tax provision	3,608	8,875
Tax effect of unrealized losses	8	12,271
Valuation allowance	(8)	(12,271)
Total Deferred Tax Assets	\$ 3,608	\$ 8,875

Our taxable subsidiaries recorded a net deferred tax provision of \$5 million in 2008 and net deferred tax benefits of \$3 million in 2007 and less than \$1 million in 2006. For our unitary state return, which includes the REIT and its taxable subsidiaries, we had an estimated 2008 NOL of \$58 million, of which \$2 million and \$56 million will expire in 2010 and 2018, respectively. At December 31, 2008, we recorded a full valuation allowance for these NOLs.

We assessed our tax positions in accordance with FIN 48 for all open tax years (Federal, years 2005 to 2007, and State, years 2004 to 2007) and as of December 31, 2008 and 2007, and concluded that we have no material unrecognized liabilities.

Note 21. Recent Developments

On January 27, 2009, we completed a public offering of 26.45 million shares of our common stock for net proceeds after expenses of \$283 million.
