the Securities Exchange Act of 1934.

Yes No

If "Yes" is marked, indicated below the file number assigned to the
registrant in connection with Rule 12g3-2(b):

GOL Presents PRASK Growth of 23% in September 2013

São Paulo, October 21, 2013 - GOL Linhas Aéreas Inteligentes S.A. (BM&FBOVESPA: GOLL4 and NYSE: GOL), (S&P: B, Fitch: B-, Moody's: B3), the largest low-cost and low-fare airline in Latin America hereby announces its preliminary air traffic figures for September 2013.

PRASK, Yield and Fuel Prices

Net PRASK presented a 23% growth over September/12, while domestic supply reduced by 8.5% in the period, both compared to the same month last year. This is the 18th consecutive monthly PRASK increase, and demonstrates GOL's efforts in continuously improving its products and focusing on the profitability of its routes. **In 3Q13, PRASK recorded a 21% increase, leading to a 14% growth year-to-date in this same indicator.**

Net yield in September posted a 25% increase year-over-year, registering between R\$21.7 and R\$22.3 cents, result of the Company's strategy of increasingly attracting high value clients. **In the third quarter of 2013, yield recorded growth of 29%, while year-to-date the increase was of 18% when compared to the same period in 2012.**

Fuel prices* moved up by 7% in the month when compared to September/12. This is due to the depreciation of the Real against the Dollar in July and August reflected in the jet fuel price formation period, which carries a time lag. In 3Q13, fuel prices presented an increase of approximately 7%, to between R\$2.43 and R\$2.48, while year-to-date this increase was of approximately 5%.

() Fuel price per liter considers total fuel and lubricant expenses divided by period consumption*

Domestic Market

In September, the **supply reduction reached 8.5%** the domestic market when compared to September/12. Year-to-date, **this reduction totaled 11.8%**.

The load factor in the domestic market reached 72.6% in September, a decrease of 0.8 percentage points over the same period in 2012. GOL continued to register **a PRASK increase considerably higher than its supply reduction level**, as demonstrated below.

GOL Linhas Aéreas Inteligentes S.A

Traffic Report

International Market

In September, supply moved up by 28.6%, when compared to the same month in 2012, basically due to the introduction of the flights to Santo Domingo, Miami and Orlando in the end of 2012. **Demand increased by 19.0% in the same period**, mainly due to these new routes, while load factor decreased by 5.1 percentage points in the international market. The greater representativeness of our flights to Santo Domingo, where around 85% of our seats are available for sale in our 737-800 NG aircraft creates pressure on our load factor indicator. As per ANAC's methodology, the load factor is calculated considering the aircraft's total capacity.

Year-to-date, supply increased by 31.1% in the international market, with demand moving up by 21.4% in the same period and load factor decreasing 4.9 percentage points, for the same reason as described above.
