**Item 1.01 Entry into a Material Definitive Agreement.**

On May 14, 2006, Illumina, Inc. (Illumina) and deCODE genetics, ehf. (deCODE) executed a Joint Development and Licensing Agreement (the Development Agreement). Pursuant to the Development Agreement, the parties agreed to collaborate exclusively to develop, validate and commercialize specific diagnostic tests for variants in genes involved in three disease-related pathways: the gene-encoding leukotriene A4 hydrolase, linked to heart attack; the gene-encoding transcription factor 7-like 2 (TCF7L2), linked to type 2 diabetes; and the gene-encoding BARD1, linked to breast cancer. Illumina and deCODE intend to develop these diagnostic tests for use on Illumina's BeadXpress system, which is expected to be launched later this year.

Under the agreement, Illumina will be responsible for the manufacturing, marketing and selling of the diagnostic products. The companies must share the development costs of these products and split the profits from sales of the diagnostics tests.

The Development Agreement may be terminated as to a particular product under development if one party decides to discontinue funding the development of that product, and may be terminated in whole by either party if the other party commits an uncured material breach, files for bankruptcy or becomes insolvent.

Under a separate supply agreement, Illumina will install instrumentation at deCODE which will enable deCODE to perform whole genome association studies on up to 100,000 samples using Illumina's HumanHap300 BeadChips and associated reagents.

The above description of the Development Agreement is qualified in its entirety to the terms of the Development Agreement, a copy of which Illumina plans to file with the Securities and Exchange Commission as an exhibit to its next quarterly report on Form 10-Q.
