Archer-Daniels-Midland Company

Notes to Consolidated Financial Statements
(Unaudited)

Note 1. Basis of Presentation

The accompanying unaudited consolidated financial statements have been prepared in accordance with generally accepted accounting principles for interim financial information and with the instructions to Form 10-Q and Article 10 of Regulation S-X. Accordingly, these statements do not include all of the information and footnotes required by generally accepted accounting principles for complete financial statements. In the opinion of management, all adjustments (consisting of normal recurring accruals) considered necessary for a fair presentation have been included. Operating results for the quarter ended December 31, 2010 are not necessarily indicative of the results that may be expected for the year ending June 30, 2011. For further information, refer to the consolidated financial statements and footnotes thereto included in the Company's annual report on Form 10-K for the year ended June 30, 2010.

Principles of Consolidation

Effective this quarter, one of the Company's majority-owned subsidiaries changed its accounting period to align with the Company's reporting period resulting in the elimination of a one-month lag in the reporting of the consolidated subsidiary's financial results. The effect of this change on after-tax earnings for the quarter and six months ended December 31, 2010 was immaterial.

Adoption of New Accounting Standards

Effective July 1, 2010, the Company adopted the amended guidance in Accounting Standards Codification (ASC) Topic 810, Consolidations, which changes how a reporting entity determines when an entity that is insufficiently capitalized or is not controlled through voting or similar rights (known as variable interest entities or VIEs) should be consolidated. The determination of whether a reporting entity is required to consolidate another entity is based on, among other things, the reporting entity's ability to direct the activities of the other entity that most significantly impact the other entity's economic performance and the other entity's purpose and design. The VIEs in which the Company holds variable interests are not individually considered material to the Company's consolidated results. As a result of the adoption of this guidance, the Company deconsolidated one VIE with no material effect on the Company's consolidated financial statements.

Effective October 1, 2010, the Company adopted the amended guidance in ASC Topic 310, Receivables, which requires more robust and disaggregated disclosures about the credit quality of an entity's financing receivables (excluding trade receivables), and its allowances for credit losses. The new disclosures require additional information for nonaccrual and past due accounts, the allowance for credit losses, impaired loans, credit quality, and account notifications. A financing receivable is defined as a contractual right to receive money on demand or on fixed or determinable dates that is recognized as an asset in the entity's statement of financial position.

The Company has seasonal financing arrangements with farmers in certain countries around the world. Typically, advances occur during the planting season and are repaid at harvest. As of December 31, 2010, \$387 million of receivables under these financing arrangements were outstanding, the majority of which was secured by various forms of collateral. Receivables are placed on non-accrual status when the accounts are in legal dispute. Interest income and losses on these inventory financing arrangements are not material.

Archer-Daniels-Midland Company

Notes to Consolidated Financial Statements (Continued)
(Unaudited)

Note 1. Basis of Presentation (Continued)

The Company also has loans receivable through its wholly-owned subsidiary, Hickory Point Bank and Trust (“HPB”). As of December 31, 2010, \$279 million of loans were outstanding. The accrual of interest on loans is discontinued when the loan is 90 days past due unless the credit is well-secured and in the process of collection. Interest income and losses on bank loans are not material

Other than as discussed above, the Company’s financing receivables as of December 31, 2010 were immaterial.

Change in Estimate

During the second quarter of fiscal year 2011, the Company updated its estimate for service lives of certain of its machinery and equipment assets in order to better match the Company’s depreciation expense with the periods these assets are expected to generate revenue based on planned and historical service periods. The new estimated service lives were established based on manufacturing engineering data, external benchmark data and on new information obtained as a result of the Company’s recent major construction projects. These new estimated service lives are also supported by biofuels legislation and mandates in many countries that are driving requirements over time for greater future usage and higher blend rates of biofuels.

The Company accounted for this service life update as a change in accounting estimate as of October 1, 2010 in accordance with the guidance of ASC Topic 250, Accounting Changes and Error Corrections, thereby impacting the current and future quarters. The effect of this change on after-tax earnings and diluted earnings per share for the quarter ended December 31, 2010 was \$24 million and \$0.04, respectively.

Reclassifications

Certain items in prior years’ consolidated statements of cash flows have been reclassified to conform to the current year’s presentation with no impact to total cash provided by (used in) operating, investing, or financing activities.

Last-in, First-out (LIFO) Inventories

Interim period LIFO calculations are based on interim period costs and management’s estimates of year-end inventory levels. Because the availability and price of agricultural commodity-based LIFO inventories are unpredictable due to factors such as weather, government farm programs and policies, and changes in global demand, quantities of LIFO-based inventories at interim periods may vary significantly from management’s estimates of year-end inventory levels.

Note 2. New Accounting Standards

Effective July 1, 2011, the Company will be required to adopt the second phase of the amended guidance in ASC Topic 820, Fair Value Measurements and Disclosures, which requires the Company to disclose information in the reconciliation of recurring Level 3 measurements about purchases, sales, issuances, and settlements on a gross basis, separately for assets and liabilities. The adoption of this amended guidance will require expanded disclosures in the notes to the Company’s consolidated financial statements but will not impact financial results.

Archer-Daniels-Midland Company

Notes to Consolidated Financial Statements (Continued)
(Unaudited)

Note 3. Acquisitions

During the quarter and six months ended December 31, 2010, the Company acquired two businesses for a total cost of \$163 million and recorded a preliminary allocation of the purchase price related to these acquisitions. The acquisition of Alimenta (USA), Inc., the Company's former 50 percent partner in Golden Peanut Company LLC., was the only significant acquisition during the quarter and six months ended December 31, 2010. This transaction resulted in the Company obtaining the control of the remaining outstanding shares of Golden Peanut Company LLC, the largest U.S. handler, processor and exporter of peanuts. This business fits well with the Company's existing U.S. oilseed and export operations in its global oilseed business. A pre-tax gain of \$71 million was recognized as a result of revaluing the Company's previously held investment in Golden Peanut Company LLC in conjunction with the acquisition of the remaining 50 percent interest based on the guidance of ASC Topic 805, Business Combinations.

The net cash purchase price for these two acquisitions of \$163 million plus the acquisition-date fair value of the equity interest the Company previously held in Golden Peanut Company LLC was allocated to working capital, property, plant and equipment, goodwill, other long-term assets, and liabilities for \$109 million, \$189 million, \$58 million, \$5 million, and \$30 million, respectively.

Note 4. Fair Value Measurements

The Company determines the fair market value of certain of its inventories of agricultural commodities, derivative contracts, and marketable securities based on the fair value definition and hierarchy levels established in the guidance of ASC Topic 820, Fair Value Measurements and Disclosures. Three levels are established within the hierarchy that may be used to measure fair value:

Level 1: Quoted prices (unadjusted) in active markets for identical assets or liabilities. Level 1 assets and liabilities include exchange-traded derivative contracts, U.S. treasury securities, and certain publicly traded equity securities.

Level 2: Observable inputs, including Level 1 prices that have been adjusted; quoted prices for similar assets or liabilities; quoted prices in markets that are less active than traded exchanges; and other inputs that are observable or can be substantially corroborated by observable market data.

Level 3: Unobservable inputs that are supported by little or no market activity and that are a significant component of the fair value of the assets or liabilities. In evaluating the significance of fair value inputs, the Company generally classifies assets or liabilities as Level 3 when their fair value is determined using unobservable inputs that individually or when aggregated with other unobservable inputs, represent more than 10% of the fair value of the assets or liabilities. Judgment is required in evaluating both quantitative and qualitative factors in the determination of significance for purposes of fair value level classification. Level 3 amounts can include assets and liabilities whose value is determined using pricing models, discounted cash flow methodologies, or similar techniques, as well as assets and liabilities for which the determination of fair value requires significant management judgment or estimation.

In many cases, a valuation technique used to measure fair value includes inputs from multiple levels of the fair value hierarchy. The lowest level of input that is a significant component of the fair value measurement determines the placement of the entire fair value measurement in the hierarchy. The Company's assessment of the significance of a

particular input to the fair value measurement requires judgment, and may affect the classification of fair value assets and liabilities within the fair value hierarchy levels.

Archer-Daniels-Midland Company

Notes to Consolidated Financial Statements (Continued)
(Unaudited)

Note 4. Fair Value Measurements (Continued)

The Company's policy regarding the timing of transfers between levels, including both transfers into and transfers out of Level 3, is to measure and record the transfers at the end of the reporting period. For the quarter and six months ended December 31, 2010, the Company had no transfers between Levels 1 and 2.

The following tables set forth, by level, the Company's assets and liabilities that were accounted for at fair value on a recurring basis as of December 31, 2010 and June 30, 2010.

Fair Value Measurements at December 31, 2010

	Quoted Prices in Active Markets for Identical Assets (Level 1)	Significant Other Observable Inputs (Level 2) (In millions)	Significant Unobservable Inputs (Level 3)	Total
Assets:

Foreign exchange contracts	184	82	–	266
Interest rate contracts	–	26	–	26
Inventory-related payables	–	207	31	238
Total Liabilities	\$ 1,121	\$ 2,476	\$ 87	\$ 3,684

The Company uses the market approach valuation technique to measure the majority of its assets and liabilities carried at fair value. Estimated fair market values for inventories carried at market are based on exchange-quoted prices, adjusted for differences in local markets, broker or dealer quotations or market transactions in either listed or over-the-counter (OTC) markets. In such cases, the inventory is classified in Level 2. Certain inventories may require management judgment or estimation for a significant component of the fair value amount. In such cases, the inventory is classified as Level 3. Changes in the fair market value of inventories are recognized in the consolidated statements of earnings as a component of cost of products sold.

Archer-Daniels-Midland Company

Notes to Consolidated Financial Statements (Continued)
(Unaudited)

Note 4. Fair Value Measurements (Continued)

The Company's derivative contracts that are measured at fair value include forward commodity purchase and sale contracts, exchange-traded commodity futures and option contracts, and OTC instruments related primarily to agricultural commodities, ocean freight, energy, interest rates, and foreign currencies. Exchange-traded futures and options contracts are valued based on unadjusted quoted prices in active markets and are classified in Level 1. The majority of the Company's exchange-traded futures and options contracts are cash-settled on a daily basis and, therefore, are not included in this table. Fair value for forward commodity purchase and sale contracts is estimated based on exchange-quoted prices adjusted for differences in local markets. These differences are generally determined using inputs from broker or dealer quotations or market transactions in either the listed or OTC markets. When observable inputs are available for substantially the full term of the contract, it is classified in Level 2. When unobservable inputs have a significant impact on the measurement of fair value, the contract is classified in Level 3. Based on historical experience with the Company's suppliers and customers, the Company's own credit risk and knowledge of current market conditions, the Company does not view nonperformance risk to be a significant input to fair value for the majority of its forward commodity purchase and sale contracts. However, in certain cases, if the Company believes the nonperformance risk to be a significant input, the Company records estimated fair value adjustments, and classifies the contract in Level 3. Except for certain derivatives designated as cash flow hedges, changes in the fair market value of commodity-related derivatives are recognized in the consolidated statements of earnings as a component of cost of products sold. Changes in the fair market value of foreign currency-related derivatives are recognized in the consolidated statements of earnings as a component of net sales and other operating income, cost of products sold, and other (income) expense – net. The effective portions of changes in the fair market value of derivatives designated as cash flow hedges are recognized in the consolidated balance sheets as a component of accumulated other comprehensive income (loss) until the hedged items are recorded in earnings or it is probable the hedged transaction will no longer occur.

The Company's marketable securities are comprised of U.S. Treasury securities, obligations of U.S. government agencies, corporate and municipal debt securities, and equity investments. U.S. Treasury securities and certain publicly traded equity investments are valued using quoted market prices and are classified in Level 1. U.S. government agency obligations, corporate and municipal debt securities and certain equity investments are valued using third-party pricing services and substantially all are classified in Level 2. Security values that are determined using pricing models are classified in Level 3. Unrealized changes in the fair market value of available-for-sale marketable securities are recognized in the consolidated balance sheets as a component of accumulated other comprehensive income (loss) unless a decline in value is deemed to be other-than-temporary at which point the decline is recorded in earnings.

Archer-Daniels-Midland Company

*Includes gains of \$96 million that are attributable to the change in unrealized gains or losses relating to Level 3 assets and liabilities still held at December 31, 2009.

Transfers into Level 3 of assets and liabilities previously classified in Level 2 were due to the relative value of unobservable inputs to the total fair value measurement on certain products and derivative contracts rising above the 10% threshold. Transfers out of Level 3 were primarily due to the relative value of unobservable inputs to the total fair value measurement on certain products and derivative contracts falling below the 10% threshold and thus permitting reclassification to Level 2.

Notes to Consolidated Financial Statements (Continued)
(Unaudited)

Note 5. Derivative Instruments and Hedging Activities

The Company recognizes all of its derivative instruments as either assets or liabilities at fair value in its consolidated balance sheets. The accounting for changes in the fair value (i.e., gains or losses) of a derivative instrument depends on whether it has been designated and qualifies as part of a hedging relationship and further, on the type of hedging relationship. The majority of the Company's derivatives have not been designated as hedging instruments. For those derivative instruments that are designated and qualify as hedging instruments, a reporting entity must designate the hedging instrument, based upon the exposure being hedged, as a fair value hedge, a cash flow hedge, or a hedge of a net investment in a foreign operation. As of December 31, 2010, the Company has certain derivatives designated as cash flow hedges. Within the Note 5 tables, zeros represent minimal amounts.

Derivatives Not Designated as Hedging Instruments

The Company generally follows a policy of using exchange-traded futures and exchange-traded and OTC options contracts to minimize its net position of merchandisable agricultural commodity inventories and forward cash purchase and sales contracts to reduce price risk caused by market fluctuations in agricultural commodities and foreign currencies. The Company also uses exchange-traded futures and exchange-traded and OTC options contracts as components of merchandising strategies designed to enhance margins. The results of these strategies can be significantly impacted by factors such as the volatility of the relationship between the value of exchange-traded commodities futures contracts and the cash prices of the underlying commodities, counterparty contract defaults, and volatility of freight markets. Exchange-traded futures, exchange-traded and OTC options contracts, and forward cash purchase and sales contracts of certain merchandisable agricultural commodities accounted for as derivatives are stated at fair value. Inventories of certain merchandisable agricultural commodities, which include amounts acquired under deferred pricing contracts, are stated at market value. Inventory is not a derivative and therefore is not included in the tables below. Changes in the market value of inventories of certain merchandisable agricultural commodities, forward cash purchase and sales contracts, exchange-traded futures, and exchange-traded and OTC options contracts are recognized in earnings immediately. Unrealized gains and unrealized losses on forward cash purchase contracts, forward foreign currency exchange (FX) contracts, forward cash sales contracts, and exchange-traded and OTC options contracts represent the fair value of such instruments and are classified on the Company's consolidated balance sheets as receivables and accrued expenses, respectively.

At March 31, 2010, the Company de-designated and discontinued hedge accounting treatment for certain interest rate swaps. At the date of de-designation of these hedges, \$21 million of after-tax gains was deferred in accumulated other comprehensive income (AOCI). These gains will remain in AOCI until the hedged transactions occur or it is probable the hedged transaction will not occur. The Company recognized in earnings \$55 million and \$24 million of pre-tax gains from these interest rate swaps during the quarter and six months ended December 31, 2010, respectively.

The following table sets forth the fair value of derivatives not designated as hedging instruments as of December 31, 2010 and June 30, 2010.

Derivatives Designated as Cash Flow Hedging Strategies

For derivative instruments that are designated and qualify as cash flow hedges (i.e., hedging the exposure to variability in expected future cash flows that is attributable to a particular risk), the effective portion of the gain or loss on the derivative instrument is reported as a component of other comprehensive income (OCI) and reclassified into

earnings in the same line item affected by the hedged transaction and in the same period or periods during which the hedged transaction affects earnings. The remaining gain or loss of the derivative instrument that is in excess of the cumulative change in the cash flows of the hedged item, if any (i.e., the ineffective portion), hedge components excluded from the assessment of effectiveness, and gains and losses related to discontinued hedges are recognized in the consolidated statement of earnings during the current period.

Archer-Daniels-Midland Company

Notes to Consolidated Financial Statements (Continued)
(Unaudited)

Note 5. Derivative Instruments and Hedging Activities (Continued)

For each of the commodity hedge programs described below, the derivatives are designated as cash flow hedges. The changes in the market value of such derivative contracts have historically been, and are expected to continue to be, highly effective at offsetting changes in price movements of the hedged item. Once the hedged item is recognized in earnings, the gains/losses arising from the hedge will be reclassified from AOCI to either net sales and other operating income, or cost of products sold. As of December 31, 2010, the Company has \$17 million of after-tax gains in AOCI related to gains and losses from commodity cash flow hedge transactions. The Company expects to recognize all of these after-tax gains in the statement of earnings during the next 12 months.

The Company, from time to time, uses futures or options contracts to fix the purchase price of anticipated volumes of corn to be purchased and processed in a future month. The objective of this hedging program is to reduce the variability of cash flows associated with the Company's forecasted purchases of corn. The Company's corn processing plants currently grind approximately 75 million bushels of corn per month. During the past 12 months, the Company hedged between 13% and 100% of its monthly anticipated grind. At December 31, 2010, the Company has hedged 100% of its anticipated monthly grind of corn over the next 3 months.

The Company, from time to time, also uses futures, options, and swaps to fix the purchase price of the Company's anticipated natural gas requirements for certain production facilities. The objective of this hedging program is to reduce the variability of cash flows associated with the Company's forecasted purchases of natural gas. These production facilities use approximately 3.5 million MMBtus of natural gas per month. During the past 12 months, the Company hedged between 47% and 77% of the quantity of its anticipated monthly natural gas purchases. At December 31, 2010, the Company has hedged portions of its anticipated monthly purchases of natural gas over the next 9 months, ranging from 9% to 50% of its anticipated monthly natural gas purchases.

To protect against fluctuations in cash flows due to foreign currency exchange rates, the Company from time to time will use forward foreign exchange contracts as cash flow hedges. Certain production facilities have manufacturing expenses and some sales contracts denominated in non-functional currency. To reduce the risk of fluctuations in cash flows due to changes in the exchange rate between functional versus non-functional currency, the Company will hedge some portion of the forecasted foreign currency expenditures and/or receipts. At December 31, 2010, the amount in AOCI related to foreign exchange contracts designated as cash flow hedging instruments as of December 31, 2010 was immaterial.

The Company, from time to time, uses treasury-lock agreements and interest rate swaps in order to lock in the Company's interest rate prior to the issuance or remarketing of its debentures. Both the treasury-lock agreements and interest rate swaps were designated as cash flow hedges of the risk of changes in the future interest payments attributable to changes in the benchmark interest rate. The objective of the treasury-lock agreements and interest rate swaps was to protect the Company from changes in the benchmark rate from the date the Company decided to issue the debt to the date when the debt will actually be issued. At December 31, 2010, AOCI included \$26 million of after-tax gains related to treasury-lock agreements and interest rate swaps, of which \$21 million relates to the interest rate swaps that were de-designated at March 31, 2010 as discussed earlier in Note 5. The Company will recognize the \$26 million of gains in its consolidated statement of earnings over the terms of the hedged items or when it is probable the hedged transactions will not occur.

Archer-Daniels-Midland Company

Notes to Consolidated Financial Statements (Continued)
(Unaudited)

Note 6. Marketable Securities and Cash Equivalents (Continued)

Of the \$11 million in unrealized losses at December 31, 2010, \$1 million arose within the last 12 months. The market value of the investments that have been in an unrealized loss position for less than 12 months and for 12 months and longer is \$49 million and \$23 million, respectively. The market value of government-sponsored enterprise obligations with unrealized losses as of December 31, 2010 is \$49 million. The \$1 million in unrealized losses associated with government-sponsored enterprise obligations are not considered to be other-than-temporary because the present value of expected cash flows to be collected is equivalent to or exceeds the amortized cost basis of the securities. The market value of available-for-sale equity securities with unrealized losses as of December 31, 2010 is \$23 million. The \$10 million in unrealized losses associated with available-for-sale equity securities is related to the Company's investment in one security. The Company does not intend to sell this equity security, and, based upon its evaluation, the Company does not believe it is likely that the Company will be required to sell the investment before recovery of its amortized cost basis.

Note 7. Debt and Financing Arrangements

The Company has outstanding \$1.15 billion principal amount of convertible senior notes (the Notes) due in 2014. As of December 31, 2010, none of the conditions permitting conversion of the Notes had been satisfied. Therefore, no share amounts related to the conversion of the Notes or exercise of the warrants sold in connection with the issuance of the Notes were included in diluted average shares outstanding.

The Company also has outstanding \$1.75 billion principal amount of Equity Units (the Units). The Units are a combination of (a) debt and (b) forward purchase contracts for the holder to purchase the Company's common stock. The forward purchase contracts issued in connection with the Units will be settled for the Company's common stock no later than June 1, 2011. Until settlement of the forward purchase contracts, the shares of stock underlying each forward purchase contract are not outstanding. The forward purchase contracts will only be included in the computation of diluted earnings per share to the extent they are dilutive. As of December 31, 2010, the forward purchase contracts were not considered dilutive and therefore were not included in the computation of diluted earnings per share.

At December 31, 2010, the fair value of the Company's long-term debt exceeded the carrying value by \$739 million, as estimated using quoted market prices or discounted future cash flows based on the Company's current incremental borrowing rates for similar types of borrowing arrangements.

At December 31, 2010, the Company had lines of credit totaling \$8.4 billion, of which \$3.3 billion was unused. Of the Company's total lines of credit, \$6.5 billion support a commercial paper borrowing facility, against which there was \$4.3 billion of commercial paper outstanding at December 31, 2010. At June 30, 2010, the Company had lines of credit totaling \$6.0 billion, of which \$4.2 billion supported a commercial paper borrowing facility. The Company expanded its overall commercial paper borrowing capacity with a \$2.3 billion increase in short-term credit facilities in the quarter ended December 31, 2010.

For further information on the Notes and Units, refer to Note 8 "Debt and Financing Arrangements" in the consolidated financial statements included in the Company's annual report on Form 10-K for the year ended June 30, 2010.

Archer-Daniels-Midland Company

Notes to Consolidated Financial Statements (Continued)
(Unaudited)

Note 8. Income Taxes

The Company's effective tax rate for the quarter and six months ended December 31, 2010, was 27.0% and 26.6%, respectively compared to 28.4% and 29.5% for the quarter and six months ended December 31, 2009, respectively. The decrease in the Company's effective tax rate is primarily due to changes in the geographic mix of pretax earnings.

The Company is subject to income taxation in many jurisdictions around the world. The Company is also subject to routine examination by domestic and foreign tax authorities and frequently faces challenges regarding the amount of taxes due. These challenges include questions regarding the timing, nature and amount of deductions and the allocation of income among various tax jurisdictions. Resolution of the related tax positions through negotiation with relevant tax authorities or through litigation may take years to complete. Therefore, it is difficult to predict the timing for resolution of tax positions. In its routine evaluations of the exposure associated with various tax filing positions, the Company recognizes a liability, when necessary, for estimated potential additional tax owed by the Company in accordance with ASC 740, Income Taxes. However, the Company cannot accurately predict or provide assurance as to the ultimate outcome of these ongoing or future examinations.

In December 2009, the Company's wholly-owned subsidiary, ADM do Brasil Ltda. ("ADM do Brasil"), received a tax assessment from the Brazilian Federal Revenue Service ("BFRS") in the amount of \$503 million (subject to interest and variation in currency exchange rates) consisting of tax, penalty, and interest, challenging the tax deductibility of commodity hedging losses incurred by ADM do Brasil in 2004. Commodity hedging transactions can result in gains, which are included in ADM do Brasil's calculations of taxable income in Brazil, and losses, which ADM do Brasil deducts from its taxable income. In June 2010, the BFRS initiated an audit related to the same matter for the tax years 2005, 2006, and 2007 resulting in an assessment for the tax years 2006 and 2007 in the amount of \$105 million (subject to interest and variation in currency exchange rates). No assessment was received for tax year 2005, which included taxable net hedging gains. In addition, the statute of limitations for tax year 2005 expired on December 31, 2010. If the BFRS were to challenge commodity hedging deductions in tax years after 2007, the Company estimates it could receive additional claims of approximately \$104 million (as of December 31, 2010 and subject to interest and variation in currency exchange rates).

In January 2010, ADM do Brasil filed an administrative appeal of the 2004 assessment with the BFRS. A decision in favor of the BFRS was received in November 2010 and a second-level administrative appeal has been filed. Additionally, an administrative appeal will be filed in February 2011 for the assessment related to the years 2006 and 2007. If ADM do Brasil continues to be unsuccessful in the administrative appellate process, further appeals are available in the Brazilian federal courts. While the Company believes that its consolidated financial statements properly reflect the tax deductibility of these hedging losses, the ultimate resolution of this matter could result in the future recognition of additional payments of, and expense for, income tax and the associated interest and penalties.

The Company has evaluated its tax position regarding these hedging transactions and concluded, based upon advice from Brazilian legal counsel, that it was appropriate to recognize both gains and losses resulting from hedging transactions when determining its Brazilian income tax expense. Therefore, the Company has continued to recognize the tax benefit from hedging losses in its financial statements and has not recorded any tax liability for the amounts

assessed by the BFRS. The Company intends to vigorously defend its position against the current assessments and any similar assessments that may be issued for years subsequent to 2007.

Note 11. Segment Information

The Company is principally engaged in procuring, transporting, storing, processing, and merchandising agricultural commodities and products. The Company's operations are classified into three reportable business segments: Oilseeds Processing, Corn Processing, and Agricultural Services. Each of these segments is organized based upon the nature of products and services offered. The Company's remaining operations, which include wheat processing, cocoa processing, and its financial business units, are not reportable segments, as defined by ASC Topic 280, Segment Reporting, and are classified as Other.

Intersegment sales have been recorded at amounts approximating market. Operating profit for each segment is based on net sales less identifiable operating expenses, including an interest charge related to working capital usage. Also included in segment operating profit is equity in earnings of affiliates based on the equity method of accounting. Certain Corporate items are not allocated to the Company's reportable business segments. Corporate results include the impact of LIFO inventory adjustments, the after-tax elimination of income attributable to mandatorily redeemable interests in consolidated subsidiaries, unallocated corporate expenses, and unallocated net interest costs.

For detailed information regarding the Company's reportable segments, see Note 15 to the consolidated financial statements included in the Company's annual report on Form 10-K for the year ended June 30, 2010.

ITEM 2. MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS

Company Overview

The Company is principally engaged in procuring, transporting, storing, processing, and merchandising agricultural commodities and products. The Company's operations are classified into three reportable business segments: Oilseeds Processing, Corn Processing, and Agricultural Services. Each of these segments is organized based upon the nature of products and services offered. The Company's remaining operations, which include wheat processing, cocoa processing, and its financial business units, are not reportable segments, as defined by the applicable accounting standard, and are classified as Other.

The Oilseeds Processing segment includes activities related to the origination, merchandising, crushing, and further processing of oilseeds such as soybeans, cottonseed, sunflower seeds, canola, rapeseed, peanuts, flaxseed, and palm into vegetable oils and protein meals. The Oilseeds Processing segment principally produces and markets processed oilseed products as ingredients for the food, feed, energy, and other industrial products industries. Crude vegetable oil is sold "as is" or is further processed by refining, blending, bleaching, and deodorizing into salad oils. Salad oils are sold "as is" or are further processed by hydrogenating and/or interesterifying into margarine, shortening, and other food products. Partially refined oil is used to produce biodiesel or is sold to other manufacturers for use in chemicals, paints, and other industrial products. Oilseed protein meals are principally sold to third parties to be used as ingredients in commercial livestock and poultry needs. The Oilseeds Processing segment also produces natural health and nutrition products and other specialty food and feed ingredients. In North America, cottonseed flour is produced and sold primarily to the pharmaceutical industry and cotton cellulose pulp is manufactured and sold to the chemical, paper, and filter markets. In Europe and South America, the Oilseeds Processing segment utilizes a network of grain elevators, port facilities, and transportation assets to buy, store, clean, and transport agricultural commodities, as adjuncts to its processing assets. In South America, the Oilseeds Processing segment also operates fertilizer blending facilities. This segment includes the Company's share of the results of its equity method investment in Wilmar International Limited (WIL). Also included is the Company's share of results for its Golden Peanut Company LLC, Edible Oils Limited, and Stratas Foods, LLC joint ventures. Effective December 31, 2010, the Company acquired Alimenta (USA) Inc., and as a result of the transaction, now owns 100% of Golden Peanut Company LLC, the leading U.S. peanut sheller and oil refiner. The Company will begin consolidating the operating results of Golden Peanut Company LLC beginning with the third quarter of fiscal 2011.

The Company's Corn Processing segment is engaged in corn wet milling and dry milling activities, primarily in the United States, related to its production of ingredients used in the food and beverage industry including syrup, starch, glucose, dextrose, and sweeteners. Dextrose is also used by the Company as a feedstock for its bioproducts operations. Corn gluten feed and meal, as well as distillers' grains, are produced for use as animal feed ingredients. Corn germ, a by-product of the wet milling process, is further processed as an oilseed into vegetable oil and protein meal.

By fermentation of dextrose, the Corn Processing segment produces alcohol, amino acids, and other specialty food and animal feed ingredients. Ethyl alcohol is produced by the Company to beverage grade or for industrial use as ethanol. In gasoline, ethanol increases octane and is used as an extender and oxygenate. Amino acids, such as lysine and threonine, are vital compounds used in swine feeds to produce leaner animals and in poultry feeds to enhance the speed and efficiency of poultry production. The Corn Processing segment also produces, by fermentation, astaxanthin, a product used in aquaculture to enhance flesh coloration. The Corn Processing segment produces citric and lactic acids, lactates, sorbitol, xanthan gum and glycols which are used in various food and industrial products. The Corn Processing segment includes the activities of the Company's Brazilian sugarcane operations, propylene and ethylene glycol facility, and investments in renewable plastics. This segment also includes the

Company's share of the results of its equity method investments in Almidones Mexicanos S.A., Eaststarch C.V., and Red Star Yeast Company LLC.

ITEM 2. MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS (Continued)

The Agricultural Services segment utilizes the Company's extensive grain elevator and transportation network to buy, store, clean, and transport agricultural commodities, such as oilseeds, corn, wheat, milo, oats, rice, and barley, and resells these commodities primarily as food and feed ingredients and as raw materials for the agricultural processing industry. Agricultural Services' grain sourcing and transportation network provides reliable and efficient services to the Company's agricultural processing operations and customers. Agricultural Services' transportation network capabilities include ground, rail, river, and ocean freight services. The Agricultural Services segment also includes activities related to procuring, processing, and distributing edible beans, and the processing and distributing of formula feeds and animal health and nutrition products. In addition, the Agricultural Services segment includes the activities of Alfred C. Toepfer International, a global merchant of agricultural commodities and processed products, and the Company's share of the results of its Kalama Export Company joint venture.

Other includes the Company's remaining processing operations, consisting of activities related to processing agricultural commodities into food ingredient products such as wheat into wheat flour, and cocoa into chocolate and cocoa products. Other also includes financial activities related to banking, captive insurance, private equity fund investments, futures commission merchant activities, and the Company's share of the results of its equity method investment in Gruma S.A.B de C.V.

Certain Corporate items are not allocated to the Company's reportable business segments. Corporate results include the impact of LIFO-related inventory adjustments, the after-tax elimination of income attributable to mandatorily redeemable interests in consolidated subsidiaries, unallocated corporate expenses, and unallocated net interest costs.

Operating Performance Indicators

The Company is exposed to certain risks inherent to an agricultural-based commodity business. These risks are further described in Item 1A, "Risk Factors" included in the Company's annual report on Form 10-K for the year ended June 30, 2010.

The Company's oilseeds processing, agricultural services, and wheat processing operations are principally agricultural commodity-based businesses where changes in selling prices move in relationship to changes in prices of the commodity-based agricultural raw materials. Therefore, changes in agricultural commodity prices have relatively equal impacts on both net sales and other operating income and cost of products sold. Thus, changes in gross profit of these businesses do not necessarily correspond to the changes in net sales and other operating income amounts.

The Company's corn processing operations and certain other food and animal feed processing operations also utilize agricultural commodities (or products derived from agricultural commodities) as raw materials. In these operations, agricultural commodity market price changes can result in significant fluctuations in cost of products sold, and such price changes cannot necessarily be passed directly through to the selling price of the finished products.

The Company conducts its business in over 60 countries. For the majority of the Company's subsidiaries located outside the United States, the local currency is the functional currency. Revenues and expenses denominated in foreign currencies are translated into U.S. dollars at the weighted average exchange rates for the applicable periods. For the majority of the Company's business activities in Brazil, the functional currency is the U.S. dollar, however certain transactions, including taxes, occur in local currency and require conversion to the functional currency. Fluctuations in the exchange rates of foreign currencies, primarily the Euro, British pound, Canadian dollar, and Brazilian real, as compared to the U.S. dollar will result in corresponding fluctuations in the U.S. dollar value of revenues and expenses reported by the Company.

ITEM 2. MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS (Continued)

The Company measures the performance of its business segments using key financial metrics such as segment operating profit, return on invested capital, return on fixed capital investment, return on equity, and cost per metric ton. The Company's operating results can vary significantly due to changes in factors such as fluctuations in energy prices, weather conditions, crop plantings, government programs and policies, changes in global demand resulting from population growth, general global economic conditions, changes in standards of living, and global production of similar and competitive crops. Due to these unpredictable factors, the Company does not provide forward-looking information in "Management's Discussion and Analysis of Financial Condition and Results of Operations."

Three Months Ended December 31, 2010 Compared to Three Months Ended December 31, 2009

Net earnings attributable to controlling interests increased \$165 million to \$732 million due principally to a \$392 million increase in segment operating profit, partially offset by increased charges associated with changes in LIFO inventory valuations caused by increasing agricultural commodity prices. Earnings before income taxes for the three months ended December 31, 2010, include a LIFO charge of \$254 million, compared to a LIFO charge of \$54 million in the prior year.

Income taxes increased \$46 million due to higher earnings before income taxes partially offset by a lower effective income tax rate, which resulted from changes in the geographic mix of earnings.

Market Factors Influencing Operations or Results

As an agricultural commodity-based business, the Company is subject to a variety of market factors which affect the Company's operating results. Prices for certain agricultural commodities were higher this quarter in response to projections of good global demand and tighter supplies. The projections of lower carryover stocks for certain commodities, coupled with regional crop supply dislocations for certain commodities, also led to generally more volatile commodity markets. The large North American harvest along with strong global demand resulted in improved global merchandising, handling, and processing opportunities and increased volumes. Protein meal demand was underpinned by good demand in Asia. Biodiesel markets continued to develop in Europe and South America in response to increasing government mandates which supported demand for refined and crude vegetable oils. Corn sweetener sales volumes were higher due primarily to strong U.S. export demand. Ethanol margins and volumes improved as gasoline blending economics were favorable. Relatively high world wheat and sugar prices made U.S. corn ethanol the most competitive ethanol for world markets.

ITEM 2. MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION
AND RESULTS OF OPERATIONS (Continued)

Analysis of Statements of Earnings

Net sales and other operating income by segment for the quarter are as follows:

	Three Months Ended December 31,		Change
	2010	2009	
	(In millions)		
Oilseeds Processing			
Crushing & Origination	\$ 3,993	\$ 3,008	\$ 985
Refining, Packaging, Biodiesel & Other	2,155	1,828	327
Asia	72	44	28
Total Oilseeds Processing	6,220	4,880	1,340
Corn Processing			
Sweeteners & Starches	874	818	56
Bioproducts	1,611	1,211	400
Total Corn Processing	2,485	2,029	456
Agricultural Services			
Merchandising & Handling	10,697	7,597	3,100
Transportation	60	43	17
Total Agricultural Services	10,757	7,640	3,117
Other			
Processing	1,439	1,341	98
Financial	29	23	6
Total Other	1,468	1,364	104
Total	\$ 20,930	\$ 15,913	\$ 5,017

Net sales and other operating income increased 32% to \$20.9 billion due principally to higher average selling prices, primarily related to higher underlying commodity costs, and to higher sales volumes as global demand was strong. Agricultural Services sales increased 41% to \$10.8 billion, due to higher average selling prices and increased global sales volumes. Oilseeds sales increased 27% to \$6.2 billion due to higher average selling prices and increased sales volumes of vegetable oil, merchandised commodities, fertilizer, and protein meal. Corn Processing sales increased 22% to \$2.5 billion due principally to higher average selling prices of ethanol, increased sales volumes of sweeteners due to higher U.S. export shipments, and higher ethanol sales volumes reflecting the start up of the Company's two new corn dry mills. Other sales increased 8% to \$1.5 billion primarily due to higher average selling prices for cocoa products and wheat flour partially offset by lower sales volumes for wheat flour.

ITEM 2. MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION
AND RESULTS OF OPERATIONS (Continued)

Cost of products sold increased 33% to \$19.7 billion due principally to higher sales volumes and higher costs of agricultural commodities and to increased charges resulting from changes in LIFO inventory valuations. Manufacturing expenses increased \$68 million primarily due to higher employee-related costs, higher maintenance costs, and higher chemicals costs, in part due to higher processing volumes resulting from the Company's new greenfield operations coming on-line. During the quarter ended December 31, 2010, the Company updated its estimates for service lives of certain of its machinery and equipment assets. This change in estimates resulted in a \$39 million decrease in depreciation expense in the current quarter compared to the amount of depreciation expense the Company would have recorded using the previously estimated service lives. Manufacturing expenses included \$22 million related to the start up of new plants this quarter compared to \$32 million in the prior year quarter.

Selling, general and administrative expenses increased 15% to \$412 million due principally to higher employee-related costs, including higher accruals for performance-based compensation and higher benefit expenses.

Other income – net increased \$87 million primarily due to the \$71 million gain resulting from the revaluation of the Company's previously held equity interest in Golden Peanut Company LLC ("Golden Peanut Gain"). Other income – net also includes unrealized gains on interest rate swaps of \$55 million partially offset by the higher expense for the eliminations of earnings attributable to mandatorily redeemable interests.

Operating profit by segment and earnings before income taxes for the quarter are as follows:

	Three Months Ended December 31,		Change
	2010	2009

Earnings Before Income Taxes	\$ 998	\$ 784	\$ 214
------------------------------	--------	--------	--------

ITEM 2. MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION
AND RESULTS OF OPERATIONS (Continued)

Corporate results for the quarter are as follows:

	Three Months Ended December 31,		Change
	2010	2009 (In millions)	
LIFO charge	\$ (254)	\$ (54)	\$ (200)
Unallocated interest expense - net	(83)	(71)	(12)
Unallocated corporate costs	(66)	(70)	4
Unrealized gains on interest rate swaps	55	—	55
Other	(16)	9	(25)
Total Corporate	\$ (364)	\$ (186)	\$ (178)

Oilseeds Processing operating profit decreased \$27 million to \$325 million. Crushing and Origination results increased \$7 million to \$200 million. Included in the current quarter's operating profit was the \$71 million Golden Peanut Gain. South American operating profit increased due to improved fertilizer and grain origination results. European results were lower due principally to the recognition of losses from mark-to-market changes in the value of futures and other contracts accounted for as derivatives. Though not designated as hedges for accounting purposes, these derivatives serve as economic hedges for changes in value of certain of the Company's inventories, which are recorded on a lower of cost or market basis. These mark-to-market timing losses were partially offset by improved margins, including the impact of favorable softseed positioning. Refining, Packaging, Biodiesel and Other results increased \$2 million to \$78 million due principally to the impacts of favorable positioning on biodiesel results in Europe partially offset by lower margins at the Company's South American refining and packaging operations. Asia results decreased \$36 million due principally to decreased earnings from the Company's equity investee, Wilmar International Limited.

Corn Processing operating profit increased \$109 million to \$399 million and were enhanced by favorable corn ownership positions. Sweeteners and Starches operating profit decreased \$52 million to \$119 million due to lower year-over-year average sweetener selling prices and higher net corn costs partially offset by increased sales volumes. Sales volumes increased due to higher U.S. exports of sweeteners and improved U.S. demand for industrial starches. Bioproducts operating profit improved \$161 million primarily due to increased ethanol and lysine gross margins and higher ethanol sales volumes. Ethanol gross margins increased due to higher average selling prices partially offset by higher net corn costs. Lysine gross margins increased principally due to higher average selling prices. Ethanol sales volumes increased reflecting the start up during 2010 of the Company's two new dry mill operations. Bioproducts results were negatively impacted by startup costs of \$22 million in the current quarter and \$32 million the same period last year related to the Company's new plants.

Agricultural Services operating profit increased \$276 million to \$426 million. Merchandising and Handling results were higher due to increased sales volumes and improved gross margins. A large U.S. harvest combined with strong international demand resulted in record quantities of U.S. grain exports by the Company. Additionally, the global merchandising results were enhanced by favorable positioning. Transportation results increased \$3 million to \$50 million primarily due to higher barge freight rates and higher barge utilization levels, in part due to higher U.S. grain export volumes.

ITEM 2. MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION
AND RESULTS OF OPERATIONS (Continued)

Other operating profit increased \$34 million to \$212 million. Other processing operating profit was similar to last year's strong results. Higher wheat operating profit was offset by decreased cocoa results. Cocoa operating profit declined due primarily to a \$24 million decrease in unrealized mark-to-market gains related to certain cocoa forward purchase and sales commitments accounted for as derivatives. Financial operating profit increased \$33 million primarily due to decreased loss reserves resulting from lower estimated captive insurance losses.

Corporate results decreased \$178 million principally due to higher charges related to LIFO inventory valuations, higher expense from the elimination of after-tax mandatorily redeemable interests in consolidated subsidiaries, and higher corporate unallocated interest expense. The effects of changing commodity prices on LIFO inventory valuations resulted in a charge of \$254 million this quarter compared to a charge of \$54 million for the prior year's quarter. Corporate unallocated interest expense increased \$12 million. During last year's quarter, approximately \$21 million of the Company's interest cost was capitalized in connection with major construction projects in progress. Most of the assets associated with these projects are now in-service resulting in significantly less capitalized interest this quarter. Lower capitalized interest was partially offset by decreased interest expense as a result of debt retirements. Also included in Corporate was \$55 million of unrealized gains on interest rate swaps entered into in connection with future debt remarketing.

Six Months Ended December 31, 2010 Compared to Six Months Ended December 31, 2009

Net earnings attributable to controlling interests increased \$14 million to \$1.1 billion due principally to higher segment operating profit and lower income taxes partially offset by increased charges associated with LIFO inventory reserves caused by increasing agricultural commodity prices. Earnings before income taxes for the six months ended December 31, 2010, include a LIFO charge of \$377 million, compared to a LIFO credit of \$22 million in the prior year. Segment operating profit for the six months ended December 31, 2010 was \$2.1 billion compared to \$1.7 billion for the six months ended December 31, 2009.

Income taxes decreased \$54 million due primarily to a lower effective income tax rate, which resulted from changes in the geographic mix of earnings.

Market Factors Influencing Operations or Results

As an agricultural commodity-based business, the Company is subject to a variety of market factors which affect the Company's operating results. Prices for certain agricultural commodities were higher this period in response to projections of good global demand and tighter supplies. The projections of lower carryover stocks for certain commodities, coupled with regional crop supply dislocations for certain commodities, also led to generally more volatile commodity markets. The large North American harvest along with strong global demand resulted in improved global merchandising, handling, and processing opportunities and increased volumes. Protein meal demand was underpinned by good demand in Asia. Biodiesel markets continued to develop in Europe and South America in response to increasing government mandates which supported demand for refined and crude vegetable oils. Corn sweetener sales volumes were higher due primarily to strong U.S. export demand. Ethanol margins and volumes improved as gasoline blending economics were favorable. Relatively high world wheat and sugar prices made U.S. corn ethanol the most competitive ethanol for world markets.

Financial	55	46	9
Total Other	3,095	2,689	406
Total	\$37,729	\$30,834	\$6,895

Net sales and other operating income increased 22% to \$37.7 billion principally due to higher sales volumes and, to a lesser extent, higher average selling prices. Agricultural Services sales increased 33% to \$17.3 billion due to higher global sales volumes of agricultural commodities and higher average selling prices. Oilseeds Processing sales increased 13% to \$12.7 billion primarily due to higher sales volumes of merchandised agricultural commodities, protein meal, and biodiesel and higher average selling prices of vegetable oil, biodiesel, and fertilizer. Corn Processing sales increased 18% to \$4.7 billion due to higher average selling prices of ethanol, higher U.S. export sales volumes of sweeteners, and increased ethanol sales volumes reflecting the start up of the Company's two new corn dry mills. Other sales increased 15% to \$3.1 billion primarily due to higher average selling prices and sales volumes of cocoa products.

ITEM 2. MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION
AND RESULTS OF OPERATIONS (Continued)

Cost of products sold increased 24% to \$35.7 billion due principally to higher sales volumes and higher costs of agricultural commodities and to increased charges associated with changes in LIFO inventory reserves. Manufacturing expenses increased \$212 million primarily due to higher processing volumes, in part due to the Company's new greenfield construction operations coming on-line, including higher chemicals costs, higher depreciation expense, increased energy prices, and higher employee-related costs. During the quarter ended December 31, 2010, the Company updated its estimates for service lives of certain of its machinery and equipment assets. This change in estimates resulted in a \$39 million decrease in depreciation expense in the current period compared to the amount of depreciation expense the Company would have recorded using the previously estimated service lives. Manufacturing expenses also included \$54 million related to the start up of new plants this period compared to \$44 million in the prior year six months.

Selling, general and administrative expenses increased 11% to \$793 million due principally to higher employee-related costs, including accruals for performance-based compensation and higher benefit expenses.

Other income – net increased \$24 million primarily due to the \$71 million Golden Peanut Gain and unrealized gains on interest rate swaps of \$24 million, partially offset by a \$28 million decrease in equity earnings of unconsolidated affiliates and a \$29 million increase in interest expense. Capitalized interest cost declined by \$50 million and was partially offset by lower interest expense of \$18 million on long term debt as a result of debt retirements.

Operating profit by segment and earnings before income taxes for the six months are as follows:

	Six Months Ended December 31,		Change
	2010	2009

ITEM 2. MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION
AND RESULTS OF OPERATIONS (Continued)

Corporate results for the six months are as follows:

	Six Months Ended December 31,		Change
	2010	2009	
	(In millions)		
LIFO credit (charge)	\$(377)	\$22	\$(399)
Unallocated interest expense - net	(172)	(136)	(36)
Unallocated corporate costs	(139)	(139)	-
Unrealized gains on interest rate swaps	24	-	24
Other	(3)	10	(13)
Total Corporate	\$(667)	\$(243)	\$(424)

Oilseeds Processing operating profit decreased \$3 million to \$633 million. Crushing and Origination results increased \$48 million to \$376 million. Included in the current year's operating profit was the \$71 million Golden Peanut Gain. Margins were enhanced by good positioning and by improved origination results. Overall, crushing volumes increased by 5%. In South America, fertilizer results improved due to higher margins and volumes. European results were lower due principally to the recognition of losses from mark-to-market changes in the value of futures and other contracts accounted for as derivatives. Though not designated as hedges for accounting purposes, these derivatives serve as economic hedges for changes in value of certain of the Company's inventories, which are recorded on a lower of cost or market basis. These mark-to-market timing losses were partially offset by improved margins, including the impact of favorable softseed positioning. Refining, Packaging, Biodiesel and Other results increased \$8 million to \$154 million due principally to the impacts of favorable positioning on biodiesel results in Europe partially offset by lower margins at the Company's South American refining and packaging operations. Asia results decreased \$59 million due principally to decreased earnings from the Company's equity investee, Wilmar International Limited.

Corn Processing operating profit increased \$262 million to \$740 million and was enhanced by favorable corn ownership positions. Sweeteners and Starches operating profit decreased \$100 million to \$265 million due to lower average sweetener selling prices and higher net corn costs partially offset by higher sales volumes. Sales volumes increased due to strong U.S. export shipments of sweeteners and improved U.S. demand for industrial starches. Bioproducts operating profit improved \$362 million primarily due to increased ethanol margins, higher ethanol sales volumes and stronger lysine margins. Bioproducts results were negatively impacted by startup costs of \$54 million in the current period compared to \$42 million in the prior period related to the Company's new plants.

Agricultural Services operating profit increased \$233 million to \$558 million. Merchandising and Handling results increased due to higher sales volumes and higher gross margins. A large U.S. harvest combined with strong international demand resulted in higher U.S. export shipments. Strong global merchandising results in the second quarter more than offset weaker results from less favorable positioning earlier in the year. Merchandising and Handling results in the current period include an insurance recovery of \$67 million related to property damage and business interruption resulting from a fiscal year 2009 explosion at the Company's Destrehan, Louisiana export facility. Transportation results increased \$14 million to \$79 million primarily due to higher barge freight rates and higher barge utilization levels, in part due to higher U.S. export volumes.

ITEM 2. MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION
AND RESULTS OF OPERATIONS (Continued)

Other operating profit decreased \$109 million to \$196 million. Other processing operating profit decreased \$80 million due primarily to timing effects resulting from unrealized mark-to-market losses of \$37 million in the current period compared to unrealized mark-to-market gains of \$63 million in the prior period related to certain cocoa forward purchase and sales commitments accounted for as derivatives. Equity earnings from the Company's equity investee, Gruma S.A.B. de C.V., were \$24 million lower in the current period. Partially offsetting these losses were improved wheat milling results and an increase in sales volumes of cocoa and cocoa products. Financial operating profit decreased \$29 million primarily due to higher captive insurance loss provisions principally related to the Company's Destrehan, Louisiana export facility insurance claim.

Corporate results decreased \$424 million. The effects of changing commodity prices on LIFO inventory reserves resulted in a charge of \$377 million compared to a credit of \$22 million for the prior period. Corporate unallocated interest expense increased \$36 million. During the six months ended December 31, 2009, approximately \$53 million of the Company's interest cost was capitalized in connection with major construction projects in progress. Most of the assets associated with these projects are now in-service resulting in significantly less capitalized interest for the six months ended December 31, 2010. Lower capitalized interest was partially offset by lower interest expense as a result of debt retirements. Also included in Corporate was \$24 million of unrealized gains on interest rate swaps entered into in connection with debt remarketing.

Liquidity and Capital Resources

A Company objective is to have sufficient liquidity, balance sheet strength, and financial flexibility to fund the operating and capital requirements of a capital intensive agricultural commodity-based business. The primary source of funds to finance the Company's operations and capital expenditures is cash generated by operations. In addition, the Company maintains a commercial paper borrowing facility and has access to equity and debt capital from public and private sources in both domestic and international markets.

At December 31, 2010, the Company had \$1.2 billion of cash, cash equivalents, and short-term marketable securities and a current ratio, defined as current assets divided by current liabilities, of 1.6 to 1. Included in working capital is \$8.3 billion of readily marketable commodity inventories. Cash used in operating activities was \$4.1 billion for the six months compared to cash provided by operating activities of \$1.4 billion the same period last year. Working capital increased in the current year due principally to significantly increasing agricultural commodity market prices and higher inventories associated with the North American harvest. Cash used in investing activities was \$1.1 billion for the six months compared to \$0.8 billion the same period last year, principally due to lower capital expenditures reflecting the completion of the majority of the Company's large greenfield construction projects. Cash provided by financing activities was \$4.7 billion for the six months compared to cash used in financing activities of \$0.3 billion for the same period last year. Net short-term borrowings, principally commercial paper, increased primarily as a result of changes in working capital.

At December 31, 2010, the Company's capital resources included net worth of \$15.9 billion and lines of credit totaling \$8.4 billion, of which \$3.3 billion is unused. The Company's ratio of long-term debt to total capital (the sum of the Company's long-term debt and shareholders' equity) was 30% at December 31, 2010 and 32% at June 30, 2010. This ratio is a measure of the Company's long-term liquidity and is an indicator of financial flexibility. Of the Company's total lines of credit, \$6.5 billion support a commercial paper borrowing facility, against which there was \$4.3 billion of commercial paper outstanding at December 31, 2010.

The Company is actively evaluating options to further increase and diversify its funding sources, including the debt remarketing associated with the \$1.75 billion Equity Units (See Note 7 to the consolidated financial statements for additional information about the Equity Units). These funding options are being evaluated in conjunction with the Company's expected business needs for liquidity including working capital and investments.

ITEM 2. MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION
AND RESULTS OF OPERATIONS (Continued)

Contractual Obligations and Commercial Commitments

The Company's purchase obligations as of December 31, 2010 were \$20.5 billion. As of December 31, 2010, the Company expects to make payments related to purchase obligations of \$19.5 billion within the next twelve months, principally related to obligations to purchase agricultural commodity inventories, including readily marketable commodity inventories. There were no other material changes in the Company's contractual obligations and off balance sheet arrangements during the six months ended December 31, 2010.

Critical Accounting Policies

There were no material changes in the Company's critical accounting policies during the six months ended December 31, 2010.

ITEM 3. QUANTITATIVE AND QUALITATIVE DISCLOSURES ABOUT MARKET RISK

The market risk inherent in the Company's market risk sensitive instruments and positions is the potential loss arising from adverse changes in: commodity market prices as they relate to the Company's net commodity position, foreign currency exchange rates, and interest rates. Significant changes in market risk sensitive instruments and positions for the quarter ended December 31, 2010 are described below. There were no material changes during the quarter in the Company's potential loss arising from changes in foreign currency exchange rates and interest rates.

For detailed information regarding the Company's market risk sensitive instruments and positions, see Item 7A, "Quantitative and Qualitative Disclosures About Market Risk" included in the Company's annual report on Form 10-K for the year ended June 30, 2010.

Commodities

The availability and prices of agricultural commodities are subject to wide fluctuations due to factors such as changes in weather conditions, disease, plantings, government programs and policies, competition, changes in global demand resulting from population growth and changes in standards of living, and global production of similar and competitive crops. A sensitivity analysis has been prepared to estimate the Company's exposure to market risk of its daily net commodity position. The Company's daily net commodity position consists of merchandisable commodity inventories, related purchase and sale contracts, and exchange-traded futures and exchange-traded and over-the-counter option contracts, including those contracts used to hedge portions of production requirements. The fair value of such daily net commodity position is a summation of the fair values calculated for each commodity by valuing each net position based on quoted futures prices. Market risk is estimated as the potential loss in fair value resulting from a hypothetical 10% percent adverse change in such prices. Actual results may differ.

Long/(Short)	Six months ended December 31, 2010		Year ended June 30, 2010	
	Fair Value	Market Risk	Fair Value	Market Risk
	(In millions)			
Highest position	\$ 2,010	\$ 201	\$ 429	\$ 43
Lowest position	156	16	(667)	(67)
Average position	1,236	124	(190)	(19)

The change in fair value of the average position was principally the result of an increase in quantities underlying the daily net commodity position and, to a lesser extent, increased commodity prices.

ITEM 4. CONTROLS AND PROCEDURES

As of December 31, 2010, an evaluation was performed under the supervision and with the participation of the Company's management, including the Chief Executive Officer and Chief Financial Officer, of the effectiveness of the design and operation of the Company's "disclosure controls and procedures" (as defined in Rules 13a – 15(e) and 15d – 15(e) under the Securities Exchange Act of 1934 (the "Exchange Act")). Based on that evaluation, the Company's management, including the Chief Executive Officer and Chief Financial Officer, concluded the Company's disclosure controls and procedures were effective to ensure that information required to be disclosed by the Company in reports that it files or submits under the Exchange Act is (a) recorded, processed, summarized and reported within the time periods specified in Securities and Exchange Commission rules and forms and (b) accumulated and communicated to the Company's management, including the Chief Executive Officer and the Chief Financial Officer, to allow timely decisions regarding required disclosure. There was no change in the Company's internal controls over financial reporting during the Company's most recently completed fiscal quarter that has materially affected, or is reasonably likely to materially affect, the Company's internal controls over financial reporting.

PART II – OTHER INFORMATION

ITEM 1. LEGAL PROCEEDINGS

The Company is a party to routine legal proceedings that arise in the course of its business. The Company is not currently a party to any legal proceeding or environmental claim that it believes would have a material adverse effect on its financial position, results of operations, or liquidity.

ITEM 1A. RISK FACTORS

There were no significant changes in the Company's risk factors during the six months ended December 31, 2010. For further information about the Company's risk factors, refer to Part I, "Item 1A. Risk Factors" in the Company's Annual Report on Form 10-K for the year ended June 30, 2010.

ITEM 2. UNREGISTERED SALES OF EQUITY SECURITIES AND USE OF PROCEEDS

Issuer Purchases of Equity Securities

Period	Total Number of Shares Purchased (1)	Average Price Paid per Share	Total Number of Shares Purchased as Part of Publicly Announced Program (2)	Number of Shares Remaining that May Be Purchased Under the Program (2)
October 1, 2010 to October 31, 2010	2,048	\$ 32.134	140	95,178,946
November 1, 2010 to November 30, 2010	452,536	30.931	444,006	94,734,940
December 1, 2010 to December 31, 2010	1,384,716	30.157	1,377,367	93,357,573
Total	1,839,300	\$ 30.350	1,821,513	93,357,573

- (1) Total shares purchased represents those shares purchased as part of the Company's publicly announced share repurchase program described below, shares received as payment of the exercise price for stock option exercises, and shares received as payment of the withholding taxes on vested restricted stock grants.
- (2) On November 5, 2009, the Company's Board of Directors approved a stock repurchase program authorizing the Company to repurchase up to 100,000,000 shares of the Company's common stock during the period commencing January 1, 2010 and ending December 31, 2014.

ITEM 4. SUBMISSION OF MATTERS TO A VOTE OF SECURITY HOLDERS

The Annual Meeting of Stockholders was held on November 4, 2010. Proxies for the Annual Meeting were solicited pursuant to Regulation 14A of the Securities Exchange Act of 1934, as amended. There was no solicitation in opposition to the Board of Director nominees as listed in the proxy statement and all nominees were elected as follows:

Nominee	Shares Cast For	Shares Withheld
G. W. Buckley	468,012,804	13,516,136
M. H. Carter	468,170,588	13,357,552
P. Dufour	460,234,466	21,294,474
D. E. Felsing	452,871,313	28,657,627
V. F. Haynes	476,641,287	4,887,653
A. Maciel	474,367,659	7,161,281
P. J. Moore	458,747,421	22,781,519
T. F. O'Neill	475,755,769	5,773,171
K. R. Westbrook	473,425,036	7,797,720
P. A. Woertz	462,792,344	18,430,412

The appointment of Ernst & Young LLP as independent accountants was ratified at the meeting by the following votes:

For	Against	Abstain
529,576,564	8,842,915	1,694,488

The Stockholder's proposal regarding political contributions was defeated as follows:

For	Against	Abstain
20,916,915	387,925,949	76,684,330

The Stockholder's proposal regarding report on political contributions was defeated as follows:

For	Against	Abstain
116,516,767	293,318,022	71,686,859

ITEM 6. EXHIBITS
