

Edgar Filing: SENECA FOODS CORP /NY/ - Form 8-K

and a subsidiary acquired in 2003 in the Bankruptcy proceedings of the Fleming Companies in the U. S. Bankruptcy Court for the District of Delaware for (i) receipt of allegedly preferential payments under the U. S. Bankruptcy Code (\$1,292,496), (ii) receipt of alleged overpayments (\$1,138,781) and (iii) amounts allegedly owing under various vendor promotional programs (\$780,121).

(2) Indemnification Claim. In connection with a February 1999 sale of a processing plant in Washington State, the Company gave the buyer contractual warranties with respect to its compliance with environmental laws. The buyer did not meet a December 31, 2000 deadline for registration under Title V of The Clean Air Act, and in 2003 the applicable county clean air authority brought a proceeding against the buyer. An additional issue in the proceeding was the Company's alleged failure to give a required pre-construction notice of the addition of a fourth boiler in the late 1980's.

The buyer has given the Company notice of its claim for indemnification under its contractual warranty of compliance of its costs of defense in the proceeding, any penalties imposed on the buyer and any costs of bringing the facility in compliance with any final order resulting from the proceeding. The environmental agency has proposed a penalty of \$131,233 against the buyer and may to issue an order requiring the buyer to modify the plant boilers in accordance with Best Available Control Technology ("BACT").

The Company is not a party in the proceedings. It has cooperated with the buyer in providing what information is in its control, although all its relevant records were turned over to the buyer in the 1999 sale. The buyer advised the Company that it has received estimates from a consultant as to the potential cost of a proposed BACT requirement, but the estimates, which are speculative, range from \$10,000 to costs exceeding \$1 million. The Company has not had the opportunity to verify these wide-ranging estimates, and it and the buyer believe that the anticipated order will allow a more definitive estimate of the costs which would result under the environmental authority's proposed order.

The buyer has presented legal and equitable reasons in the proceeding why it should not be subject to penalties or other harsh enforcement requirements. The Company has withheld any specific response to the buyer's claim for indemnification, but it believes that the enforcement proceeding was primarily triggered by events and practices at the plant subsequent to the Company's sale in February 1999.
