Syngenta announces breakthrough sugar cane planting technology in Brazil

Syngenta announced today that it is developing a new technology to dramatically improve the cost efficiency of sugar cane planting in Brazil. Syngenta's innovation would reduce planting costs per hectare by some 15%, driven by a novel approach to grow sugar cane from smaller cane segments using proprietary treatments. The technology is planned for launch in 2010 under the brand name Plene™ and has a market potential of \$300 million per year by 2015.

Current practice for planting sugar cane is labor and equipment intensive. Rather than using the present method of planting 30-40 centimeter long cuttings, Syngenta is developing a method of producing sugarcane segments of less than four centimeters in length. These will be treated with proprietary crop protecting seed care applications to maximize early plant development.

The method would allow sugar cane growers to replant their fields more frequently, eliminating the typical yield degradation of the crop and thereby leading to a yield gain of up to 15%. It would also enable growers to use lighter planting equipment which saves on fuel costs. This planting machinery is under development in partnership with US agricultural equipment manufacturer John Deere.

"Plene will represent a breakthrough in cost efficiency for the planting of sugar cane", said John Atkin, Chief Operating Officer of Syngenta Crop Protection. "Sugar cane is an important crop for food and bioethanol, and demand is expected to grow strongly. Plene will broaden our offer significantly and bring to our sugar cane customers an integrated seed, crop protection and technical support program with clear productivity and cost benefits."

Brazil is the market leader in sugar cane production, with some eight million hectares under cultivation, 2% of the country's arable land. Current production of sugar cane is around 500 million tons<sup>1</sup>. Increased demand for sugar cane comes from its use as sugar and as a raw material in the production of biofuel. Today, Brazil produces 40% of global bioethanol.

The introduction of Plene is pending regulatory approvals in Brazil.

Syngenta acquires Chrysanthemum and Aster business from US flowers producer Yoder Brothers

Syngenta announced today that it has signed an agreement to acquire the pot and garden Chrysanthemum and Aster business of US flowers producer Yoder Brothers Inc. Parties agreed not to disclose financial details of the transaction. Chrysanthemums are one of the top five selling pot and garden flowers in the global industry. In 2007 the two crops accounted for around \$24 million of Yoder's sales.

“This targeted acquisition significantly strengthens our proprietary flower cuttings portfolio and broadens our offer to growers with two new crops. The Yoder brand is highly recognized in the flowers industry and their Chrysanthemums and Asters stand for top quality genetics“, said Robert Berendes, Head of Business Development at Syngenta.

The acquisition includes all rights to Yoder's Chrysanthemum and Aster genetics and breeding programs, as well as the Yoder brand name, and will involve some 150 employees joining Syngenta.

The transaction is expected to close in Q4 2008, pending regulatory approvals.

Syngenta Flowers is a worldwide leader in the pot and bedding plant industry with a large proprietary portfolio. Operating on a global basis, it breeds and markets high-quality flower seeds, young plants and cuttings for the ornamental industry. In 2007, Syngenta reported flowers sales of \$272 million.

Syngenta is a world-leading agribusiness committed to sustainable agriculture through innovative research and technology. The company is a leader in crop protection, and ranks third in the high-value commercial seeds market. Sales in 2007 were approximately \$9.2 billion. Syngenta employs over 21,000 people in more than 90 countries. Syngenta is listed on the Swiss stock exchange (SYNN) and in New York (SYT).
