Morgan Stanley Finance LLC

STRUCTURED INVESTMENTS

Opportunities in U.S. and International Equities

Contingent Income Auto-Callable Securities due February 3, 2020, with 9-month Initial Non-Call Period

All Payments on the Securities Based on the Worst Performing of the iShares[®] MSCI Emerging Markets ETF and the S&P 500[®] Index

Fully and Unconditionally Guaranteed by Morgan Stanley

Principal at Risk Securities

The securities offered are unsecured obligations of Morgan Stanley Finance LLC (“MSFL”) and are fully and unconditionally guaranteed by Morgan Stanley. The securities have the terms described in the accompanying product supplement, index supplement and prospectus, as supplemented or modified by this document. The securities do not guarantee the repayment of principal and do not provide for the regular payment of interest. Instead, the securities will pay a contingent quarterly coupon **but only if** the closing level of **each of** the iShares[®] MSCI Emerging Markets ETF **and** the S&P 500[®] Index is **at or above** its coupon barrier level of 70% of its respective initial level on the related observation date. If, however, the closing level of **either** underlying is less than its coupon barrier level on any observation date, we will pay no interest for the related quarterly period. In addition, the securities will be automatically redeemed if the closing level **of each** underlying is greater than or equal to its respective initial level on any of the three quarterly redemption determination dates (beginning approximately nine months after the original issue date) for the early redemption payment equal to the sum of the stated principal amount plus the related contingent quarterly coupon. At maturity, if the securities have not previously been redeemed and the closing level of each underlying has remained greater than or equal to 70% of the respective initial level, which we refer to as the downside threshold level, on **each trading day and each index business day** during the term of the securities, the payment at maturity will be the stated principal amount and the related contingent quarterly coupon. If, however, the closing level of **either** underlying is less than its respective downside threshold level on **any trading day or index business day** during the term of the securities, a trigger event will have occurred and investors will be fully exposed to the decline in the worst performing underlying on a 1-to-1 basis and, if the final level of **either** underlying is less than its initial level, investors will receive a payment at maturity that is less than the stated principal amount of the securities and could be zero. **Accordingly, investors in the securities must be willing to accept the risk of losing their entire initial investment and also the risk of not receiving any contingent quarterly coupons throughout the 1.5-year term of the securities.** Because all payments on the securities are based on the worst performing of the

underlyings, a decline beyond the respective coupon barrier level or respective downside threshold level, as applicable, of either underlying will result in few or no contingent coupon payments and a potentially significant loss of your investment, even if the other underlying has appreciated or has not declined as much. The securities are for investors who are willing to risk their principal and seek an opportunity to earn interest at a potentially above-market rate in exchange for the risk of receiving no quarterly coupons over the entire 1.5-year term. Investors will not participate in any appreciation of either underlying. The securities are notes issued as part of MSFL's Series A Global Medium-Term Notes program.

All payments are subject to our credit risk. If we default on our obligations, you could lose some or all of your investment. These securities are not secured obligations and you will not have any security interest in, or otherwise have any access to, any underlying reference asset or assets.

SUMMARY TERMS

Issuer:	Morgan Stanley Finance LLC
Guarantor:	Morgan Stanley
Underlyings:	iShares [®] MSCI Emerging Markets ETF (the "EEM Shares" or "the Fund") and S&P 500 Index (the "SPX Index")
Aggregate principal amount:	\$
Stated principal amount:	\$1,000 per security
Issue price:	\$1,000 per security
Pricing date:	July 26, 2018
Original issue date:	July 31, 2018 (3 business days after the pricing date)
Maturity date:	February 3, 2020
Early redemption:	<p>The securities are not subject to automatic early redemption until nine months after the original issue date. Following this initial 9-month non-call period, if, on any of the three redemption determination dates, beginning on April 26, 2019, the closing level of each underlying is greater than or equal to its respective initial level, the securities will be automatically redeemed for an early redemption payment on the related early redemption date. No further payments will be made on the securities once they have been redeemed.</p> <p>The securities will not be redeemed early on any early redemption date if the closing level of either underlying is below the respective initial level for such underlying on the related redemption determination date.</p> <p>The early redemption payment will be an amount equal to (i) the stated principal amount for each security you hold plus (ii) the contingent quarterly coupon with respect to the related observation date.</p>
Early redemption payment:	
Contingent quarterly coupon:	A <i>contingent</i> coupon at an annual rate of 7.75% (corresponding to approximately \$19.375 per quarter per security) will be paid on the

securities on each coupon payment date *but only if* the closing value of **each underlying** is at or above its respective coupon barrier level on the related observation date.

If, on any observation date, the closing value of either underlying is less than the respective coupon barrier level for such underlying, we will pay no coupon for the applicable quarterly period. It is possible that one or both underlyings will remain below their respective coupon barrier levels for extended periods of time or even throughout the entire 1.5-year term of the securities so that you will receive few or no contingent quarterly coupons.

Trigger event:

A trigger event occurs if, on any trading day or index business day from but excluding the pricing date to and including the final observation date, the closing level of **either** underlying is less than its respective downside threshold level. If a trigger event occurs on **any trading day or index business day** during the term of the securities, you will be exposed to the downside performance of the worst performing underlying at maturity.

Payment at maturity:

At maturity, investors will receive, in addition to the final contingent quarterly coupon payment, if payable, a payment at maturity determined as follows:

If a trigger event HAS NOT occurred on any trading day or index business day during the term of the securities up to and including the final observation date: the stated principal amount

If a trigger event HAS occurred on any trading day or index business day during the term of the securities up to and including the final observation date: (i) the stated principal amount *multiplied by* (ii) the performance factor of the worst performing underlying, subject to a maximum payment at maturity of the stated principal amount.

If a trigger event occurs and the final level of **either** underlying is less than its initial level, the payment at maturity will be less than the stated

principal amount of the securities and could be zero.

Under no circumstances will investors participate in any appreciation of either underlying.

Principal at Risk Securities

Investment Summary

Contingent Income Auto-Callable Securities

Principal at Risk Securities

Contingent Income Auto-Callable Securities due February 3, 2020, with 9-month Initial Non-Call Period All Payments on the Securities Based on the Worst Performing of the iShares[®] MSCI Emerging Markets ETF and the S&P 500[®] Index (the “securities”) do not provide for the regular payment of interest. Instead, the securities will pay a contingent quarterly coupon **but only if** the closing level of **each** underlying is **at or above** 70% of its initial level, which we refer to as the respective coupon barrier level, on the related observation date. If the closing level of **either underlying** is less than the respective coupon barrier level on any observation date, we will pay no coupon for the related quarterly period. It is possible that the closing level of either underlying could remain below the respective coupon barrier level for extended periods of time or even throughout the entire 1.5-year term of the securities so that you will receive few or no contingent quarterly coupons during the term of the securities. We refer to these coupons as contingent, because there is no guarantee that you will receive a coupon payment on any coupon payment date. Even if both underlyings were to be at or above their respective coupon barrier levels on some quarterly observation dates, one or both underlyings may fluctuate below the respective coupon barrier level(s) on others. In addition, if the securities have not been automatically called prior to maturity and the closing level of **either** underlying is less than 70% of the respective initial level, which we refer to as the downside threshold level, on **any trading day or index business day** during the term of the securities, a trigger event will have occurred and investors will be fully exposed to the decline in the worst performing underlying on a 1-to-1 basis and, if the final level of **either** underlying is less than its initial level, investors will receive a payment at maturity that is less than the stated principal amount of the securities and could be zero. Investors will not participate in any appreciation of either underlying. **Accordingly, investors in the securities must be willing to accept the risk of losing their entire initial investment and also the risk of not receiving any contingent quarterly coupons throughout the entire 1.5-year term of the securities.**

Maturity:	Approximately 1.5 years
Contingent quarterly coupon:	A <i>contingent quarterly coupon</i> at an annual rate of 7.75% (corresponding to approximately \$19.375 per quarter per security) will be paid on the securities on each coupon payment date but only if the closing value of each underlying is at or above the respective coupon barrier level on the related observation date. If on any observation date, the closing value of either underlying is less than the respective coupon barrier level, we will pay no coupon for the applicable quarterly period.
Automatic early redemption	If the closing level of each underlying is greater than or equal to its initial level on any of the three quarterly redemption determination dates, beginning on April 26, 2019 (approximately 9

(beginning after nine months):

months after the original issue date), the securities will be automatically redeemed for an early redemption payment equal to the stated principal amount plus the contingent quarterly coupon with respect to the related observation date.

Trigger event:

A trigger event occurs if, on any trading day or index business day from but excluding the pricing date to and including the final observation date, the closing level of **either** underlying is less than its respective downside threshold level. If a trigger event occurs on **any trading day or index business day** during the term of the securities, investors will be exposed to the downside performance of the worst performing underlying at maturity.

At maturity, investors will receive, in addition to the final contingent quarterly coupon payment, if payable, a payment at maturity determined as follows:

Payment at maturity:

If a trigger event HAS NOT occurred on any trading day or index business day during the term of the securities up to and including the final observation date, investors will receive at maturity the stated principal amount.

If a trigger event HAS occurred on any trading day or index business day during

The original issue price of each security is \$1,000. This price includes costs associated with issuing, selling, structuring and hedging the securities, which are borne by you, and, consequently, the estimated value of the securities on the pricing date will be less than \$1,000. We estimate that the value of each security on the pricing date will be approximately \$965.90, or within \$15.00 of that estimate. Our estimate of the value of the securities as determined on the pricing date will be set forth in the final pricing supplement.

What goes into the estimated value on the pricing date?

In valuing the securities on the pricing date, we take into account that the securities comprise both a debt component and a performance-based component linked to the underlyings. The estimated value of the securities is determined using our own pricing and valuation models, market inputs and assumptions relating to the underlyings, instruments based on the underlyings, volatility and other factors including current and expected interest rates, as well as an interest rate related to our secondary market credit spread, which is the implied interest rate at which our conventional fixed rate debt trades in the secondary market.

What determines the economic terms of the securities?

In determining the economic terms of the securities, including the contingent quarterly coupon rate, the coupon barrier levels and the downside threshold levels, we use an internal funding rate, which is likely to be lower than our secondary market credit spreads and therefore advantageous to us. If the issuing, selling, structuring and hedging costs borne by you were lower or if the internal funding rate were higher, one or more of the economic terms of the securities would be more favorable to you.

What is the relationship between the estimated value on the pricing date and the secondary market price of the securities?

The price at which MS & Co. purchases the securities in the secondary market, absent changes in market conditions, including those related to the underlyings, may vary from, and be lower than, the estimated value on the pricing date,

because the secondary market price takes into account our secondary market credit spread as well as the bid-offer spread that MS & Co. would charge in a secondary market transaction of this type and other factors. However, because the costs associated with issuing, selling, structuring and hedging the securities are not fully deducted upon issuance, for a period of up to 6 months following the issue date, to the extent that MS & Co. may buy or sell the securities in the secondary market, absent changes in market conditions, including those related to the underlyings, and to our secondary market credit spreads, it would do so based on values higher than the estimated value. We expect that those higher values will also be reflected in your brokerage account statements.

MS & Co. may, but is not obligated to, make a market in the securities and, if it once chooses to make a market, may cease doing so at any time.

Key Investment Rationale

The securities do not provide for the regular payment of interest. Instead, the securities will pay a contingent quarterly coupon **but only if** the closing level of each underlying is **at or above** its respective coupon barrier level on the related observation date. The securities have been designed for investors who are willing to forgo market floating interest rates and accept the risk of receiving no coupon payments for the entire 1.5-year term of the securities in exchange for an opportunity to earn interest at a potentially above market rate if each underlying closes at or above its respective coupon barrier level on each quarterly observation date until the securities are redeemed early or reach maturity. The following scenarios are for illustrative purposes only to demonstrate how the coupon and the payment at maturity (if the securities have not previously been redeemed) are calculated, and do not attempt to demonstrate every situation that may occur. Accordingly, the securities may or may not be redeemed, the contingent coupon may be payable in none of, or some but not all of, the quarterly periods during the 1.5-year term of the securities and the payment at maturity may be less than the stated principal amount of the securities and may be zero.

This scenario assumes that, prior to early redemption, each underlying closes at or above its coupon barrier level on some quarterly observation dates, but one or both underlyings close below the respective coupon barrier level(s) on the others. Investors receive the contingent quarterly coupon for the quarterly periods for which each closing level is at or above the coupon respective barrier level on the related observation date, but not for the quarterly periods for which either closing level is below the respective coupon barrier level on the related observation date.

Scenario 1: The securities are redeemed prior to maturity

Starting on April 26, 2019, when each underlying closes at or above its initial level on a quarterly redemption determination date, the securities will be automatically redeemed for the stated principal amount *plus* the contingent quarterly coupon with respect to the related observation date.

Scenario 2: The securities are not redeemed prior to maturity and investors receive principal back at maturity

This scenario assumes that a trigger event has not occurred, as each underlying has closed at or above the respective downside threshold level on each trading day and each index business day during the term of the securities. In addition, each underlying closes below the respective initial level on every quarterly redemption determination date. Consequently, the securities are not automatically redeemed, and investors receive the contingent quarterly coupon for each quarterly period, as each closing level was at or above the respective

coupon barrier level on each observation date. Because a trigger event has not occurred on any trading day or index business day during the term of the securities, at maturity, investors will receive the stated principal amount and the contingent quarterly coupon with respect to the final observation date.

This scenario assumes that each underlying closes at or above its respective coupon barrier level on some quarterly observation dates, but one or both underlyings close below the respective coupon barrier level(s) on the others, and each underlying closes below the respective initial level on every quarterly redemption determination date. Consequently, the securities are not automatically redeemed and a trigger event will have occurred. Investors receive the contingent quarterly coupon for the quarterly periods for which each closing level is at or above the respective coupon barrier level on the related observation date, but not for the quarterly periods for which either closing level is below the respective coupon barrier level on the related observation date. On the final observation date, one or both underlyings close below the respective initial level(s). At maturity, investors will receive an amount equal to the stated principal amount multiplied by the performance factor of the worst performing underlying. Under these circumstances, the payment at maturity will be less than the stated principal amount and could be zero.

Scenario 3: The securities are not redeemed prior to maturity, a trigger event occurs on any trading day or index business day during the term of the securities and investors suffer a loss of principal at maturity

If a trigger event occurs on **any** trading day or index business day during the term of the securities, investors will have full downside exposure to the worst performing underlying at maturity. Under these circumstances, if the final level of **either** underlying is less than its respective initial level, investors will lose some or all of their investment in the securities.

Hypothetical Examples

The following hypothetical examples illustrate how to determine whether a contingent quarterly coupon is paid with respect to an observation date and how to calculate the payment at maturity if the securities have not been automatically redeemed early. The following examples are for illustrative purposes only. Whether you receive a contingent quarterly coupon will be determined by reference to the closing level of each underlying on each quarterly observation date, and the amount you will receive at maturity, if any, will be determined by reference to the closing level of each underlying throughout the term of the securities. The actual initial level, coupon barrier level and downside threshold level for each underlying will be determined on the pricing date. All payments on the securities, if any, are subject to our credit risk. The numbers in the hypothetical examples below may have been rounded for the ease of analysis. The below examples are based on the following terms:

7.75% per annum (corresponding to approximately \$19.375 per quarter per security)*

Contingent Quarterly
Coupon:

With respect to each coupon payment date, a contingent quarterly coupon is paid but only if the closing level of each underlying is at or above its respective coupon barrier level on the related observation date.

Automatic Early
Redemption:

If the closing level of **each** underlying is greater than or equal to its initial level on any of the three quarterly redemption determination dates (beginning approximately nine months after the original issue date), the securities will be automatically redeemed for an early redemption payment equal to the stated principal amount plus the contingent quarterly coupon with respect to the related observation date.

Trigger event:

A trigger event occurs if, on any trading day or index business day from but excluding the pricing date to and including the final observation date, the closing level of **either** underlying is less than its respective downside threshold level. If a trigger event occurs on **any trading day or index business day** during the term of the securities, investors will be exposed to the downside performance of the worst performing underlying at maturity.

Payment at Maturity (if
the securities have not
been automatically
redeemed early):

At maturity, investors will receive, in addition to the final contingent quarterly coupon payment, if payable, a payment at maturity determined as follows:

If a trigger event HAS NOT occurred on any trading day or index business day during the term of the securities up to and including the final observation date: the stated principal amount

If a trigger event HAS occurred on any trading day or index business day during the term of the securities up to and including the final observation date: (i) the stated principal amount *multiplied by* (ii) the performance factor of the worst performing underlying, subject to a maximum payment at maturity of the stated principal amount.

If a trigger event occurs and the final level of **either** underlying is less than its initial level, the payment at maturity will be less than the stated principal amount of the securities and could be zero.

Under no circumstances will investors participate in any appreciation of either underlying.

Stated Principal Amount: \$1,000
With respect to the EEM Shares: \$42.00

Hypothetical Initial Level:
With respect to the SPX Index: 2,500
With respect to the EEM Shares: \$29.40, which is 70% of the hypothetical initial level for such underlying

Hypothetical Coupon
Barrier Level:
With respect to the SPX Index: 1,750, which is 70% of the hypothetical initial level for such underlying
With respect to the EEM Shares: \$29.40, which is 70% of the hypothetical initial level for such underlying

Hypothetical Downside
Threshold Level:
With respect to the SPX Index: 1,750, which is 70% of the hypothetical initial level for such

Principal at Risk Securities

How to determine whether a contingent quarterly coupon is payable with respect to an observation date:

	Closing Level		Contingent Quarterly Coupon
	EEM Shares	SPX Index	
Hypothetical Observation Date 1	\$32.00 (at or above coupon barrier level)	2,100 (at or above coupon barrier level)	\$19.375
Hypothetical Observation Date 2	\$22.00 (below coupon barrier level)	2,600 (at or above coupon barrier level)	\$0
Hypothetical Observation Date 3	\$36.00 (at or above coupon barrier level)	1,400 (below coupon barrier level)	\$0
Hypothetical Observation Date 4	\$19.00 (below coupon barrier level)	1,200 (below coupon barrier level)	\$0

On hypothetical observation date 1, both the EEM Shares and SPX Index close at or above their respective coupon barrier levels. Therefore a contingent quarterly coupon of \$19.375 is paid on the relevant coupon payment date.

On each of the hypothetical observation dates 2 and 3, one underlying closes at or above its coupon barrier level, but the other underlying closes below its coupon barrier level. Therefore, no contingent quarterly coupon is paid on the relevant coupon payment date.

On hypothetical observation date 4, each underlying closes below its respective coupon barrier level, and, accordingly, no contingent quarterly coupon is paid on the relevant coupon payment date.

You will not receive a contingent quarterly coupon on any coupon payment date if the closing level of either underlying is below its respective coupon barrier level on the related observation date.

How to calculate the payment at maturity (if the securities have not been automatically redeemed early):

Example 1: A trigger event HAS NOT occurred.

Final Level EEM Shares: \$52.00
 SPX Index: 3,000

Payment at Maturity = \$1,000.00 + \$19.375 (contingent quarterly coupon for the final quarterly period)
 = \$1,019.375

In example 1, the closing levels of both the EEM Shares and SPX Index are at or above their respective downside threshold levels on **each trading day and each index business day** during the term of the securities. Therefore, a trigger event has not occurred and investors receive at maturity the stated principal amount of the securities and the contingent quarterly coupon with respect to the final observation date. However, investors do not participate in any appreciation of either underlying.

Example 2: A trigger event HAS occurred.

Final Level EEM Shares: \$33.60
 SPX Index: 3,000

Payment at Maturity = \$19.375 (contingent quarterly coupon for the final quarterly period) + [\$1,000 x performance factor of the worst performing underlying, subject to a maximum of the stated principal amount]

Morgan Stanley Finance LLC

Contingent Income Auto-Callable Securities due February 3, 2020, with 9-month Initial Non-Call Period

All Payments on the Securities Based on the Worst Performing of the iShares® MSCI Emerging Markets ETF and the S&P 500® Index

Principal at Risk Securities

$$\begin{aligned}
 &= \$19.375 + [\$1,000 \times (\$33.60 / \\
 &\quad \$42.00)] \\
 &= \$819.375
 \end{aligned}$$

In example 2, the closing level of one underlying is at or above its downside threshold level on each trading day or index business day during the term of the securities, but the closing level of the other underlying is below its downside threshold level on one or more trading days or index business days during the term of the securities. The final levels of both the EEM Shares and the SPX Index are at or above the respective coupon barrier levels on the final observation date. However, because a trigger event has occurred, investors are exposed to the downside performance of the worst performing underlying at maturity, even though one of the underlyings has appreciated. Because the final level of each underlying is greater than its respective coupon barrier level, investors receive the contingent quarterly coupon with respect to the final observation date. The payment at maturity is an amount equal to the contingent quarterly coupon with respect to the final observation date *plus* (i) the stated principal amount *times* (ii) the performance factor of the worst performing underlying.

Example 3: A trigger event HAS occurred.

Final Level	EEM Shares: \$25.20
	SPX Index: 1,000

$$\begin{aligned}
 \text{Payment at Maturity} &= \$1,000 \times \text{performance factor of the worst performing underlying} \\
 &= \$1,000 \times (1,000 / 2,500) = \$400 \\
 &= \$400
 \end{aligned}$$

In example 3, the closing levels of both the EEM Shares and SPX Index are below the respective downside threshold levels on one or more trading days or index business days during the term of the securities. Therefore, a trigger event has occurred, and investors are exposed to the downside performance of the worst performing underlying at maturity. Because the final level of one or both underlyings are below the respective coupon barrier levels, investors do not receive the contingent quarterly coupon with respect to the final observation date. The payment at maturity is an amount equal to the stated principal amount *times* the performance factor of the worst performing underlying.

If a trigger event occurs on any trading day or index business day during the term of the securities, investors will have full downside exposure to the worst performing underlying at maturity. Under these circumstances, if the final level of either underlying is less than its respective initial level, investors will lose some or all of their investment in the securities.

Principal at Risk Securities

Risk Factors

The following is a list of certain key risk factors for investors in the securities. For further discussion of these and other risks, you should read the section entitled “Risk Factors” in the accompanying product supplement, index supplement and prospectus. We also urge you to consult with your investment, legal, tax, accounting and other advisers in connection with your investment in the securities.

The securities do not guarantee the return of any principal. The terms of the securities differ from those of ordinary debt securities in that they do not guarantee the repayment of any principal. If the securities have not been automatically redeemed prior to maturity and the closing level of **either** underlying is less than its respective downside threshold level on **any trading day or index business day** during the term of the securities, a trigger event will have occurred and you will be exposed to the decline in the closing value of the worst performing underlying, as compared to its initial level, on a 1-to-1 basis at maturity. If a trigger event occurs on any trading day or index § business day during the term of the securities, investors will have full downside exposure to the worst performing underlying at maturity. Under these circumstances, if the final level of either underlying is less than its respective initial level, investors will lose some or all of their investment in the securities. In this case, you will receive for each security that you hold at maturity an amount equal to the stated principal amount *times* the performance factor of the worst performing underlying, subject to a maximum payment at maturity of the stated principal amount. **In this case, the payment at maturity will be less than the stated principal amount and could be zero.**

The securities do not provide for the regular payment of interest. The terms of the securities differ from those of ordinary debt securities in that they do not provide for the regular payment of interest. Instead, the securities will pay a contingent quarterly coupon **but only if** the closing level of **each** underlying is **at or above 70%** of its respective initial level, which we refer to as the coupon barrier level, on the related observation date. If, on the other hand, the closing level of **either** underlying is lower than the coupon barrier level for such underlying on the relevant § observation date for any interest period, we will pay no coupon on the applicable coupon payment date. Moreover, in such a case, a trigger event will necessarily have occurred, and you will have full downside exposure to the worst performing underlying at maturity. It is possible that the closing level of one or both underlyings will remain below the respective coupon barrier level(s) for extended periods of time or even throughout the entire 1.5-year term of the securities so that you will receive few or no contingent quarterly coupons. If you do not earn sufficient contingent quarterly coupons over the term of the securities, the overall return on the securities may be less than the amount that would be paid on a conventional debt security of ours of comparable maturity.

§

You are exposed to the price risk of both underlyings, with respect to both the contingent quarterly coupons, if any, and the payment at maturity, if any. Your return on the securities is not linked to a basket consisting of both underlyings. Rather, it will be contingent upon the independent performance of each underlying. Unlike an instrument with a return linked to a basket of underlying assets, in which risk is mitigated and diversified among all the components of the basket, you will be exposed to the risks related to both underlyings. Poor performance by **either** underlying over the term of the securities will negatively affect your return and will not be offset or mitigated by any positive performance by the other underlying. To receive **any** contingent quarterly coupons, **each** underlying must close at or above its respective coupon barrier level on the applicable observation date. In addition, if the securities have not been automatically redeemed early and the closing level of either underlying is less than its respective downside threshold level on any trading day or index business day during the term of the securities, a trigger event will have occurred and you will be **fully exposed** to the decline in the worst performing underlying over the term of the securities on a 1-to-1 basis, even if the other underlying has appreciated or has not declined as much, and even if the worst performing underlying is not the underlying that originally caused the occurrence of the trigger event. Under this scenario, the value of any such payment will be less than the stated principal amount and could be zero. Accordingly, your investment is subject to the price risk of both underlyings.

Because the securities are linked to the performance of the worst performing underlying, you are exposed to greater risks of receiving no contingent quarterly coupons and sustaining a loss on your investment than if the securities were linked to just one index. The risk that you will not receive any contingent quarterly coupons, or § that you will suffer a loss on your investment, is greater if you invest in the securities as opposed to substantially similar securities that are linked to the performance of just one underlying. With two underlyings, it is more likely that either

Morgan Stanley Finance LLC

Contingent Income Auto-Callable Securities due February 3, 2020, with 9-month Initial Non-Call Period

All Payments on the Securities Based on the Worst Performing of the iShares[®] MSCI Emerging Markets ETF and the S&P 500[®] Index

Principal at Risk Securities

underlying will close below its coupon barrier level on any observation date, or below its downside threshold level on any trading day or index business day during the term of the securities, which would constitute a trigger event, than if the securities were linked to only one underlying. Therefore, it is more likely that you will not receive any contingent quarterly coupons and that you will suffer a loss on your investment. In addition, because each underlying must close above its initial level on a quarterly determination date in order for the securities to be called prior to maturity, the securities are less likely to be called on any redemption determination date than if the securities were linked to just one underlying.

The contingent quarterly coupon, if any, is based on the value of each underlying on only the related quarterly observation date at the end of the related interest period. Whether the contingent quarterly coupon will be paid on any coupon payment date will be determined at the end of the relevant interest period based on the closing value of each underlying on the relevant quarterly observation date. As a result, you will not know whether you will receive the contingent quarterly coupon on any coupon payment date until near the end of the relevant § interest period. Moreover, because the contingent quarterly coupon is based solely on the value of each underlying on quarterly observation dates, if the closing value of either underlying on any observation date is below the coupon barrier level for such index, you will receive no coupon for the related interest period, even if the level of such underlying was at or above its respective coupon barrier level on other days during that interest period and even if the closing value of the other underlying is at or above the coupon barrier level for such index.

Investors will not participate in any appreciation in either underlying. Regardless of whether or not a trigger event occurs, investors will not participate in any appreciation in either underlying from the initial level for such § index, and the return on the securities will be limited to the contingent quarterly coupons, if any, that are paid with respect to each observation date on which the closing level of each underlying is greater than or equal to its respective coupon barrier level.

The securities are subject to our credit risk, and any actual or anticipated changes to our credit ratings or credit spreads may adversely affect the market value of the securities. You are dependent on our ability to pay all amounts due on the securities at maturity, upon early redemption or on any coupon payment date, and therefore § you are subject to our credit risk. The securities are not guaranteed by any other entity. If we default on our obligations under the securities, your investment would be at risk and you could lose some or all of your investment. As a result, the market value of the securities prior to maturity will be affected by changes in the market's view of our creditworthiness. Any actual or anticipated decline in our credit ratings or increase in the credit spreads charged by the market for taking our credit risk is likely to adversely affect the market value of the securities.

§

As a finance subsidiary, MSFL has no independent operations and will have no independent assets. As a finance subsidiary, MSFL has no independent operations beyond the issuance and administration of its securities and will have no independent assets available for distributions to holders of MSFL securities if they make claims in respect of such securities in a bankruptcy, resolution or similar proceeding. Accordingly, any recoveries by such holders will be limited to those available under the related guarantee by Morgan Stanley and that guarantee will rank *pari passu* with all other unsecured, unsubordinated obligations of Morgan Stanley. Holders will have recourse only to a single claim against Morgan Stanley and its assets under the guarantee. Holders of securities issued by MSFL should accordingly assume that in any such proceedings they would not have any priority over and should be treated *pari passu* with the claims of other unsecured, unsubordinated creditors of Morgan Stanley, including holders of Morgan Stanley-issued securities.

There are risks associated with investments in securities, such as the securities, linked to the value of foreign (and especially emerging markets) equity securities. The EEM Shares track the performance of the MSCI Emerging Markets IndexSM (the “share underlying index”), which is linked to the value of foreign (and especially emerging markets) equity securities. Investments in securities linked to the value of foreign equity securities involve risks associated with the securities markets in those countries, including risks of volatility in those markets, § governmental intervention in those markets and cross-shareholdings in companies in certain countries. Also, there is generally less publicly available information about foreign companies than about U.S. companies that are subject to the reporting requirements of the Securities and Exchange Commission, and foreign companies are subject to accounting, auditing and financial reporting standards and requirements different from those applicable to U.S. reporting companies. The prices of securities issued in foreign markets may be affected by political, economic, financial and social factors in

Morgan Stanley Finance LLC

Contingent Income Auto-Callable Securities due February 3, 2020, with 9-month Initial Non-Call Period

All Payments on the Securities Based on the Worst Performing of the iShares® MSCI Emerging Markets ETF and the S&P 500® Index

Principal at Risk Securities

those countries, or global regions, including changes in government, economic and fiscal policies and currency exchange laws. In addition, the stocks included in the MSCI Emerging Markets IndexSM and that are generally tracked by the EEM Shares have been issued by companies in various emerging markets countries, which pose further risks in addition to the risks associated with investing in foreign equity markets generally. Countries with emerging markets may have relatively unstable governments, may present the risks of nationalization of businesses, restrictions on foreign ownership and prohibitions on the repatriation of assets, and may have less protection of property rights than more developed countries. The economies of countries with emerging markets may be based on only a few industries, may be highly vulnerable to changes in local or global trade conditions, and may suffer from extreme and volatile debt burdens or inflation rates. Local securities markets may trade a small number of securities and may be unable to respond effectively to increases in trading volume, potentially making prompt liquidation of holdings difficult or impossible at times. Moreover, the economies in such countries may differ unfavorably from the economy in the United States in such respects as growth of gross national product, rate of inflation, capital reinvestment, resources, self-sufficiency and balance of payment positions between countries.

The price of the EEM Shares is subject to currency exchange risk. Because the price of the EEM Shares is related to the U.S. dollar value of stocks underlying the MSCI Emerging Markets IndexSM (the “share underlying index”), holders of the securities will be exposed to currency exchange rate risk with respect to each of the currencies in which such component securities trade. Exchange rate movements for a particular currency are volatile and are the result of numerous factors including the supply of, and the demand for, those currencies, as well as relevant § government policy, intervention or actions, but are also influenced significantly from time to time by political or economic developments, and by macroeconomic factors and speculative actions related to the relevant region. An investor’s net exposure will depend on the extent to which the currencies of the component securities strengthen or weaken against the U.S. dollar and the relative weight of each currency. If, taking into account such weighting, the dollar strengthens against the currencies of the component securities represented in the MSCI Emerging Markets IndexSM, the price of the EEM Shares will be adversely affected and the payment on the securities may be reduced.

Of particular importance to potential currency exchange risk are:

- existing and expected rates of inflation;
- existing and expected interest rate levels;
- the balance of payments; and

the extent of governmental surpluses or deficits in the countries represented in the MSCI Emerging Markets IndexSM and the United States.

All of these factors are in turn sensitive to the monetary, fiscal and trade policies pursued by the governments of various countries represented in the MSCI Emerging Markets IndexSM and the United States and other countries important to international trade and finance.

The market price will be influenced by many unpredictable factors. Several factors, many of which are beyond our control, will influence the value of the securities in the secondary market and the price at which MS & Co. may be willing to purchase or sell the securities in the secondary market. We expect that generally the level of interest rates available in the market and the value of each underlying on any trading day or index business day, including in relation to its respective coupon barrier level and downside threshold level, will affect the value of the securities more than any other factors. Other factors that may influence the value of the securities include:

o the volatility (frequency and magnitude of changes in value) of each underlying and of the stocks composing the share underlying index and the SPX Index,

o whether a trigger event has occurred on any trading day or index business day during the term of the securities,

o whether the closing level of either underlying has been below its respective coupon barrier level on any observation date,

Morgan Stanley Finance LLC

Contingent Income Auto-Callable Securities due February 3, 2020, with 9-month Initial Non-Call Period

All Payments on the Securities Based on the Worst Performing of the iShares® MSCI Emerging Markets ETF and the S&P 500® Index

Principal at Risk Securities

o geopolitical conditions and economic, financial, political, regulatory or judicial events that affect the component stocks of the underlyings or securities markets generally and which may affect the value of each underlying,

o dividend rates on the securities underlying the share underlying index and the SPX Index,

o the time remaining until the securities mature,

o interest and yield rates in the market,

o the availability of comparable instruments,

o the composition of the underlyings and changes in the constituent stocks of the share underlying index and the SPX Index,

o the occurrence of certain events affecting the EEM Shares that may or may not require an adjustment to the adjustment factor, and

o any actual or anticipated changes in our credit ratings or credit spreads.

Some or all of these factors will influence the price that you will receive if you sell your securities prior to maturity. In particular, if either underlying has closed near or below its coupon barrier level and downside threshold level, the market value of the securities is expected to decrease substantially, and you may have to sell your securities at a substantial discount from the stated principal amount of \$1,000 per security.

You cannot predict the future performance of either underlying based on its historical performance. The value of either underlying may decrease and be below the coupon barrier level for such index on each observation date so that you will receive no return on your investment, and one or both underlyings may close below the respective downside threshold level(s) on any trading day or index business day during the term of the securities so that you are exposed to the negative performance of the worst performing underlying at maturity. There can be no assurance that the closing level of each underlying will be at or above the respective coupon barrier level on any observation date so that you

will receive a coupon payment on the securities for the applicable interest period, or that it will be at or above its respective downside threshold level on each trading day and each index business day during the term of the securities so that you do not suffer a loss on your initial investment in the securities. See “iShare® MSCI Emerging Markets ETF Overview” and “S&P 500 Index Overview” below.

The antidilution adjustments the calculation agent is required to make do not cover every event that could affect the EEM Shares. MS & Co., as calculation agent, will adjust the adjustment factor for certain events § affecting the EEM Shares. However, the calculation agent will not make an adjustment for every event that could affect the EEM Shares. If an event occurs that does not require the calculation agent to adjust the adjustment factor, the market price of the securities may be materially and adversely affected.

Adjustments to the EEM Shares or the share underlying index could adversely affect the value of the securities. The investment adviser to the Fund, BlackRock Fund Advisors (the “Investment Adviser”), seeks investment results that correspond generally to the price and yield performance, before fees and expenses, of the share underlying index. Pursuant to its investment strategy or otherwise, the Investment Adviser may add, delete or substitute the stocks composing the Fund. Any of these actions could adversely affect the price of the EEM Shares and, consequently, the value of the securities. MSCI Inc. (“MSCI”) is responsible for calculating and maintaining the § share underlying index. MSCI may add, delete or substitute the stocks constituting the share underlying index or make other methodological changes that could change the value of the share underlying index. MSCI may discontinue or suspend calculation or publication of the share underlying index at any time. In these circumstances, the calculation agent will have the sole discretion to substitute a successor index that is comparable to the discontinued share underlying index and is permitted to consider indices that are calculated and published by the calculation agent or any of its affiliates. Any of these actions could adversely affect the value of the EEM Shares, and consequently, the value of the securities.

The performance and market price of the EEM Shares, particularly during periods of market volatility, may not correlate with the performance of the share underlying index, the performance of the component § securities of the share underlying index or the net asset value per share of the EEM Shares. The EEM Shares do not fully

Morgan Stanley Finance LLC

Contingent Income Auto-Callable Securities due February 3, 2020, with 9-month Initial Non-Call Period

All Payments on the Securities Based on the Worst Performing of the iShares[®] MSCI Emerging Markets ETF and the S&P 500[®] Index

Principal at Risk Securities

replicate the share underlying index and may hold securities that are different than those included in the share underlying index. In addition, the performance of the EEM Shares will reflect additional transaction costs and fees that are not included in the calculation of the share underlying index. All of these factors may lead to a lack of correlation between the performance of EEM Shares and the share underlying index. In addition, corporate actions (such as mergers and spin-offs) with respect to the equity securities underlying the EEM Shares may impact the variance between the performances of EEM Shares and the share underlying index. Finally, because the shares of the EEM Shares are traded on an exchange and are subject to market supply and investor demand, the market price of one share of the EEM Shares may differ from the net asset value per share of the EEM Shares.

In particular, during periods of market volatility, or unusual trading activity, trading in the securities underlying the EEM Shares may be disrupted or limited, or such securities may be unavailable in the secondary market. Under these circumstances, the liquidity of the EEM Shares may be adversely affected, market participants may be unable to calculate accurately the net asset value per share of the EEM Shares, and their ability to create and redeem shares of the EEM Shares may be disrupted. Under these circumstances, the market price of shares of the EEM Shares may vary substantially from the net asset value per share of the EEM Shares or the level of the share underlying index.

For all of the foregoing reasons, the performance of the EEM Shares may not correlate with the performance of the share underlying index, the performance of the component securities of the share underlying index or the net asset value per share of the EEM Shares. Any of these events could materially and adversely affect the price of the shares of the EEM Shares and, therefore, the value of the securities. Additionally, if market volatility or these events were to occur on the final observation date, the calculation agent would maintain discretion to determine whether such market volatility or events have caused a market disruption event to occur, and such determination may affect the payment at maturity of the securities. If the calculation agent determines that no market disruption event has taken place, the payment at maturity would be based on the published closing price per share of the EEM Shares on the final observation date, even if the EEM Shares' shares are underperforming the share underlying index or the component securities of the share underlying index and/or trading below the net asset value per share of the EEM Shares.

Not equivalent to investing in the underlyings or the stocks composing the share underlying index or the SPX Index. Investing in the securities is not equivalent to investing in either underlying or the component stocks of the § share underlying index or the SPX Index. Investors in the securities will not participate in any positive performance of either underlying, and will not have voting rights or rights to receive dividends or other distributions or any other rights with respect to stocks that constitute the share underlying index or the SPX Index.

Reinvestment risk. The term of your investment in the securities may be shortened due to the automatic early redemption feature of the securities. If the securities are redeemed prior to maturity, you will receive no more § contingent quarterly coupons and may be forced to invest in a lower interest rate environment and may not be able to reinvest at comparable terms or returns. However, under no circumstances will the securities be redeemed in the first nine months of the term of the securities.

The securities will not be listed on any securities exchange and secondary trading may be limited.

Accordingly, you should be willing to hold your securities for the entire 1.5-year term of the securities. The securities will not be listed on any securities exchange. Therefore, there may be little or no secondary market for the securities. MS & Co. may, but is not obligated to, make a market in the securities and, if it once chooses to make a market, may cease doing so at any time. When it does make a market, it will generally do so for transactions of routine secondary market size at prices based on its estimate of the current value of the securities, taking into account § its bid/offer spread, our credit spreads, market volatility, the notional size of the proposed sale, the cost of unwinding any related hedging positions, the time remaining to maturity and the likelihood that it will be able to resell the securities. Even if there is a secondary market, it may not provide enough liquidity to allow you to trade or sell the securities easily. Since other broker-dealers may not participate significantly in the secondary market for the securities, the price at which you may be able to trade your securities is likely to depend on the price, if any, at which MS & Co. is willing to transact. If, at any time, MS & Co. were to cease making a market in the securities, it is likely that there would be no secondary market for the securities. Accordingly, you should be willing to hold your securities to maturity.

§ The rate we are willing to pay for securities of this type, maturity and issuance size is likely to be lower than the rate implied by our secondary market credit spreads and advantageous to us. Both the lower rate and the

Morgan Stanley Finance LLC

Contingent Income Auto-Callable Securities due February 3, 2020, with 9-month Initial Non-Call Period

All Payments on the Securities Based on the Worst Performing of the iShares[®] MSCI Emerging Markets ETF and the S&P 500[®] Index

Principal at Risk Securities

inclusion of costs associated with issuing, selling, structuring and hedging the securities in the original issue price reduce the economic terms of the securities, cause the estimated value of the securities to be less than the original issue price and will adversely affect secondary market prices. Assuming no change in market conditions or any other relevant factors, the prices, if any, at which dealers, including MS & Co., may be willing to purchase the securities in secondary market transactions will likely be significantly lower than the original issue price, because secondary market prices will exclude the issuing, selling, structuring and hedging-related costs that are included in the original issue price and borne by you and because the secondary market prices will reflect our secondary market credit spreads and the bid-offer spread that any dealer would charge in a secondary market transaction of this type as well as other factors.

The inclusion of the costs of issuing, selling, structuring and hedging the securities in the original issue price and the lower rate we are willing to pay as issuer make the economic terms of the securities less favorable to you than they otherwise would be.

However, because the costs associated with issuing, selling, structuring and hedging the securities are not fully deducted upon issuance, for a period of up to 6 months following the issue date, to the extent that MS & Co. may buy or sell the securities in the secondary market, absent changes in market conditions, including those related to the underlyings, and to our secondary market credit spreads, it would do so based on values higher than the estimated value, and we expect that those higher values will also be reflected in your brokerage account statements.

The estimated value of the securities is determined by reference to our pricing and valuation models, which may differ from those of other dealers and is not a maximum or minimum secondary market price. These pricing and valuation models are proprietary and rely in part on subjective views of certain market inputs and certain assumptions about future events, which may prove to be incorrect. As a result, because there is no market-standard way to value these types of securities, our models may yield a higher estimated value of the securities than those § generated by others, including other dealers in the market, if they attempted to value the securities. In addition, the estimated value on the pricing date does not represent a minimum or maximum price at which dealers, including MS & Co., would be willing to purchase your notes in the secondary market (if any exists) at any time. The value of your securities at any time after the date of this pricing supplement will vary based on many factors that cannot be predicted with accuracy, including our creditworthiness and changes in market conditions. See also “The market price will be influenced by many unpredictable factors” above.

Hedging and trading activity by our affiliates could potentially affect the value of the securities. One or more of our affiliates and/or third-party dealers expect to carry out hedging activities related to the securities (and to other instruments linked to the underlyings and the share underlying index), including trading in the EEM Shares, the stocks that constitute the share underlying index or the SPX Index as well as in other instruments related to the underlyings. As a result, these entities may be unwinding or adjusting hedge positions during the term of the securities, and the hedging strategy may involve greater and more frequent dynamic adjustments to the hedge as the final observation date approaches. Some of our affiliates also trade the underlyings and other financial instruments related to the underlyings and the share underlying index on a regular basis as part of their general broker-dealer and other businesses. Any of these hedging or trading activities on or prior to the pricing date could potentially increase the initial level of an underlying, and, therefore, could increase (i) the value at or above which such underlying must close on the redemption determination dates so that the securities are redeemed prior to maturity for the early redemption payment (depending also on the performance of the other underlying), (ii) the coupon barrier level for such underlying, which is the value at or above which such underlying must close on the observation dates in order for you to earn a contingent quarterly coupon (depending also on the performance of the other underlying), and (iii) the downside threshold level for such underlying, which is the value at or above which such underlying must close on each trading day or index business day, as applicable, during the term of the securities so that you are not exposed to the negative performance of the worst performing underlying at maturity (depending also on the performance of the other underlying). Additionally, such hedging or trading activities during the term of the securities could affect the value of an underlying throughout the term of the securities, and, accordingly, whether we redeem the securities prior to maturity, whether we pay a contingent quarterly coupon on the securities and the amount of cash you receive at maturity, if any (depending also on the performance of the other underlying).

Morgan Stanley Finance LLC

Contingent Income Auto-Callable Securities due February 3, 2020, with 9-month Initial Non-Call Period

All Payments on the Securities Based on the Worst Performing of the iShares® MSCI Emerging Markets ETF and the S&P 500® Index

Principal at Risk Securities

The calculation agent, which is a subsidiary of Morgan Stanley and an affiliate of MSFL, will make determinations with respect to the securities. As calculation agent, MS & Co. will determine the initial level, the coupon barrier level and the downside threshold level for each underlying, whether you receive a contingent quarterly coupon on each coupon payment date and/or at maturity, whether the securities will be redeemed on any early redemption date, whether a trigger event has occurred, the payment at maturity, if any, and whether to make any adjustments to the adjustment factor. Moreover, certain determinations made by MS & Co., in its capacity as calculation agent, may require it to exercise discretion and make subjective judgments, such as with respect to the occurrence or non-occurrence of market disruption events and the selection of a successor index or calculation of the closing price or index closing value, as applicable, of any underlying in the event of a market disruption event or discontinuance of the share underlying index or the SPX Index. These potentially subjective determinations may adversely affect the payout to you at maturity, if any. For further information regarding these types of determinations, see "Description of Auto-Callable Securities—Postponement of Determination Dates," "—Alternate Exchange Calculation in Case of an Event of Default," "—Discontinuance of the Underlying Shares of an Exchange-Traded Fund and/or Share Underlying Index; Alteration of Method of Calculation," "Discontinuance of Any Underlying Index; Alteration of Method of Calculation" and "—Calculation Agent and Calculations" in the accompanying product supplement. In addition, MS & Co. has determined the estimated value of the securities on the pricing date.

Adjustments to the SPX Index could adversely affect the value of the securities. The publisher of the SPX Index may add, delete or substitute the component stocks of such underlying or make other methodological changes that could change the value of such underlying. Any of these actions could adversely affect the value of the securities. The publisher of the SPX Index may also discontinue or suspend calculation or publication of such underlying at any time. In these circumstances, MS & Co., as the calculation agent, will have the sole discretion to substitute a successor index that is comparable to the discontinued index. MS & Co. could have an economic interest that is different than that of investors in the securities insofar as, for example, MS & Co. is permitted to consider indices that are calculated and published by MS & Co. or any of its affiliates. If MS & Co. determines that there is no appropriate successor index on any relevant date of calculation, the determination of whether a contingent quarterly coupon will be payable on the securities on the applicable coupon payment date, and/or the amount payable at maturity, will be based on the value of such underlying, based on the closing prices of the stocks constituting such underlying at the time of such discontinuance, without rebalancing or substitution, computed by MS & Co. as calculation agent in accordance with the formula for calculating such underlying last in effect prior to such discontinuance, as compared to the coupon barrier level or downside threshold level, as applicable (depending also on the performance of the other underlying).

The U.S. federal income tax consequences of an investment in the securities are uncertain. There is no direct legal authority as to the proper treatment of the securities for U.S. federal income tax purposes, and, therefore, significant aspects of the tax treatment of the securities are uncertain.

Please read the discussion under “Additional Provisions—Tax considerations” in this document concerning the U.S. federal income tax consequences of an investment in the securities. We intend to treat a security for U.S. federal income tax purposes as a single financial contract that provides for a coupon that will be treated as gross income to you at the time received or accrued, in accordance with your regular method of tax accounting. Under this treatment, the ordinary income treatment of the coupon payments, in conjunction with the capital loss treatment of any loss recognized upon the sale, exchange or settlement of the securities, could result in adverse tax consequences to holders of the securities because the deductibility of capital losses is subject to limitations. We do not plan to request a ruling from the Internal Revenue Service (the “IRS”) regarding the tax treatment of the securities, and the IRS or a court may not agree with the tax treatment described herein. If the IRS were successful in asserting an alternative treatment for the securities, the timing and character of income or loss on the securities might differ significantly from the tax treatment described herein. For example, under one possible treatment, the IRS could seek to recharacterize the securities as debt instruments. In that event, U.S. Holders (as defined below) would be required to accrue into income original issue discount on the securities every year at a “comparable yield” determined at the time of issuance (as adjusted based on the difference, if any, between the actual and the projected amount of any contingent payments on the securities) and recognize all income and gain in respect of the securities as ordinary income. The risk that financial instruments providing for buffers, triggers or similar downside protection features, such as the securities, would be recharacterized as debt is greater than the risk of recharacterization for comparable financial instruments that do not have such features.

Contingent Income Auto-Callable Securities due February 3, 2020, with 9-month Initial Non-Call Period

All Payments on the Securities Based on the Worst Performing of the iShares[®] MSCI Emerging Markets ETF and the S&P 500[®] Index

Principal at Risk Securities

Non-U.S. Holders (as defined below) should note that we currently intend to withhold on any coupon paid to Non-U.S. Holders generally at a rate of 30%, or at a reduced rate specified by an applicable income tax treaty under an “other income” or similar provision, and will not be required to pay any additional amounts with respect to amounts withheld.

In 2007, the U.S. Treasury Department and the IRS released a notice requesting comments on the U.S. federal income tax treatment of “prepaid forward contracts” and similar instruments. While it is not clear whether the securities would be viewed as similar to the prepaid forward contracts described in the notice, it is possible that any Treasury regulations or other guidance promulgated after consideration of these issues could materially and adversely affect the tax consequences of an investment in the securities, possibly with retroactive effect. The notice focuses on a number of issues, the most relevant of which for holders of the securities are the character and timing of income or loss and the degree, if any, to which income realized by non-U.S. investors should be subject to withholding tax. Both U.S. and Non-U.S. Holders should consult their tax advisers regarding the U.S. federal income tax consequences of an investment in the securities, including possible alternative treatments, the issues presented by this notice and any tax consequences arising under the laws of any state, local or non-U.S. taxing jurisdiction.

Additional Information About the Securities

Please read this information in conjunction with the summary terms on the front cover of this document.

Additional Provisions:

Interest period:	Quarterly
Record date:	The record date for each coupon payment date shall be the date one business day prior to such scheduled coupon payment date; <i>provided</i> , however, that any coupon payable at maturity (or upon early redemption) shall be payable to the person to whom the payment at maturity or early redemption payment, as the case may be, shall be payable.
Downside threshold level:	The accompanying product supplement refers to the downside threshold level as the “trigger level.”
Day count convention:	30/360
Postponement of coupon payment dates (including the maturity date) and early redemption dates:	If any observation date or redemption determination date is postponed due to a non-trading day or non-index business day, as applicable, or certain market disruption events so that it falls less than two business days prior to the relevant scheduled coupon payment date (including the maturity date) or early redemption date, as applicable, the coupon payment date (or the maturity date) or the early redemption date will be postponed to the second business day following that observation date or redemption determination date as postponed, and no adjustment will be made to any coupon payment or early redemption payment made on that postponed date.
Denominations:	\$1,000 per security and integral multiples thereof
Minimum ticketing size:	\$1,000 / 1 security
Tax considerations:	Prospective investors should note that the discussion under the section called “United States Federal Taxation” in the accompanying product supplement does not apply to the securities issued under this document and is superseded by the following discussion.

The following is a general discussion of the material U.S. federal income tax consequences and certain estate tax consequences of the ownership and disposition of the securities. This discussion applies only to investors in the securities who:

- purchase the securities in the original offering; and
- hold the securities as capital assets within the meaning of Section 1221 of the Internal Revenue Code of 1986, as amended (the “Code”).

This discussion does not describe all of the tax consequences that may be relevant to a holder in light of the holder’s particular circumstances or to holders subject to special rules, such as:

- certain financial institutions;
- insurance companies;
- certain dealers and traders in securities or commodities;
- investors holding the securities as part of a “straddle,” wash sale, conversion transaction, integrated transaction or constructive sale transaction;
- U.S. Holders (as defined below) whose functional currency is not the U.S. dollar;
- partnerships or other entities classified as partnerships for U.S. federal income tax purposes;
- regulated investment companies;
- real estate investment trusts; or
- tax-exempt entities, including “individual retirement accounts” or “Roth IRAs” as defined in Section 408 or 408A of the Code, respectively.

If an entity that is classified as a partnership for U.S. federal income tax purposes holds the securities, the U.S. federal income tax treatment of a partner will generally depend on the status of the partner and the activities of the partnership. If you are a partnership holding the securities or a partner in such a partnership, you should consult your tax adviser as to the particular U.S. federal tax consequences of holding and disposing of the securities to you.

As the law applicable to the U.S. federal income taxation of instruments such as the securities

Morgan Stanley Finance LLC

Contingent Income Auto-Callable Securities due February 3, 2020, with 9-month Initial Non-Call Period

Principal at Risk Securities

is technical and complex, the discussion below necessarily represents only a general summary. The effect of any applicable state, local or non-U.S. tax laws is not discussed, nor are any alternative minimum tax consequences or consequences resulting from the Medicare tax on investment income. Moreover, the discussion below does not address the consequences to taxpayers subject to special tax accounting rules under Section 451(b) of the Code.

This discussion is based on the Code, administrative pronouncements, judicial decisions and final, temporary and proposed Treasury regulations, all as of the date hereof, changes to any of which subsequent to the date hereof may affect the tax consequences described herein. Persons considering the purchase of the securities should consult their tax advisers with regard to the application of the U.S. federal income tax laws to their particular situations as well as any tax consequences arising under the laws of any state, local or non-U.S. taxing jurisdiction.

General

Due to the absence of statutory, judicial or administrative authorities that directly address the treatment of the securities or instruments that are similar to the securities for U.S. federal income tax purposes, no assurance can be given that the IRS or a court will agree with the tax treatment described herein. We intend to treat a security for U.S. federal income tax purposes as a single financial contract that provides for a coupon that will be treated as gross income to you at the time received or accrued in accordance with your regular method of tax accounting. In the opinion of our counsel, Davis Polk & Wardwell LLP, this treatment of the securities is reasonable under current law; however, our counsel has advised us that it is unable to conclude affirmatively that this treatment is more likely than not to be upheld, and that alternative treatments are possible.

You should consult your tax adviser regarding all aspects of the U.S. federal tax consequences of an investment in the securities (including possible alternative treatments of the securities). Unless otherwise stated, the following discussion is based on the treatment of each security as described in the previous paragraph.

Tax Consequences to U.S. Holders

This section applies to you only if you are a U.S. Holder. As used herein, the term “U.S. Holder” means a beneficial owner of a security that is, for U.S. federal income tax purposes:

- a citizen or individual resident of the United States;

- a corporation, or other entity taxable as a corporation, created or organized in or under the laws of the United States, any state thereof or the District of Columbia; or

- an estate or trust the income of which is subject to U.S. federal income taxation regardless of its source.

Tax Treatment of the Securities

Assuming the treatment of the securities as set forth above is respected, the following U.S. federal income tax consequences should result.

Tax Basis. A U.S. Holder’s tax basis in the securities should equal the amount paid by the U.S. Holder to acquire the securities.

Tax Treatment of Coupon Payments. Any coupon payment on the securities should be taxable as ordinary income to a U.S. Holder at the time received or accrued, in accordance with the U.S. Holder’s regular method of accounting for U.S. federal income tax purposes.

Sale, Exchange or Settlement of the Securities. Upon a sale, exchange or settlement of the securities, a U.S. Holder should recognize gain or loss equal to the difference between the amount realized on the sale, exchange or settlement and the U.S. Holder’s tax basis in the securities sold, exchanged or settled. For this purpose, the amount realized does not include any coupon paid at settlement and may not include sale proceeds attributable to an accrued

Morgan Stanley Finance LLC

Contingent Income Auto-Callable Securities due February 3, 2020, with 9-month Initial Non-Call Period

All Payments on the Securities Based on the Worst Performing of the iShares[®] MSCI Emerging Markets ETF and the S&P 500[®] Index

Principal at Risk Securities

coupon, which may be treated as a coupon payment. Any such gain or loss recognized should be long-term capital gain or loss if the U.S. Holder has held the securities for more than one year at the time of the sale, exchange or settlement, and should be short-term capital gain or loss otherwise. The ordinary income treatment of the coupon payments, in conjunction with the capital loss treatment of any loss recognized upon the sale, exchange or settlement of the securities, could result in adverse tax consequences to holders of the securities because the deductibility of capital losses is subject to limitations.

Possible Alternative Tax Treatments of an Investment in the Securities

Due to the absence of authorities that directly address the proper tax treatment of the securities, no assurance can be given that the IRS will accept, or that a court will uphold, the treatment described above. In particular, the IRS could seek to analyze the U.S. federal income tax consequences of owning the securities under Treasury regulations governing contingent payment debt instruments (the “Contingent Debt Regulations”). If the IRS were successful in asserting that the Contingent Debt Regulations applied to the securities, the timing and character of income thereon would be significantly affected. Among other things, a U.S. Holder would be required to accrue into income original issue discount on the securities every year at a “comparable yield” determined at the time of their issuance, adjusted upward or downward to reflect the difference, if any, between the actual and the projected amount of any contingent payments on the securities. Furthermore, any gain realized by a U.S. Holder at maturity or upon a sale, exchange or other disposition of the securities would be treated as ordinary income, and any loss realized would be treated as ordinary loss to the extent of the U.S. Holder’s prior accruals of original issue discount and as capital loss thereafter. The risk that financial instruments providing for buffers, triggers or similar downside protection features, such as the securities, would be recharacterized as debt is greater than the risk of recharacterization for comparable financial instruments that do not have such features.

Other alternative federal income tax treatments of the securities are possible, which, if applied, could significantly affect the timing and character of the income or loss with respect to the securities. In 2007, the U.S. Treasury Department and the IRS released a notice requesting comments on the U.S. federal income tax treatment of “prepaid forward contracts” and similar instruments. The notice focuses on whether to require holders of “prepaid forward contracts” and similar instruments to accrue income over the term of their investment. It also asks for comments on a number of related topics, including the character of income or loss with respect to these instruments; whether short-term instruments should be subject to any such accrual regime; the relevance of factors such as the exchange-traded status of the instruments and the nature of the underlying property to which the instruments are linked; whether these instruments are or should be subject to the “constructive ownership” rule, which very generally can operate to recharacterize certain long-term capital gain as ordinary income and impose an interest charge; and

appropriate transition rules and effective dates. While it is not clear whether instruments such as the securities would be viewed as similar to the prepaid forward contracts described in the notice, any Treasury regulations or other guidance promulgated after consideration of these issues could materially and adversely affect the tax consequences of an investment in the securities, possibly with retroactive effect. U.S. Holders should consult their tax advisers regarding the U.S. federal income tax consequences of an investment in the securities, including possible alternative treatments and the issues presented by this notice.

Backup Withholding and Information Reporting

Backup withholding may apply in respect of payments on the securities and the payment of proceeds from a sale, exchange or other disposition of the securities, unless a U.S. Holder provides proof of an applicable exemption or a correct taxpayer identification number and otherwise complies with applicable requirements of the backup withholding rules. The amounts withheld under the backup withholding rules are not an additional tax and may be refunded, or credited against the U.S. Holder's U.S. federal income tax liability, provided that the required information is timely furnished to the IRS. In addition, information returns will be filed with the IRS in connection with payments on the securities and the payment of proceeds from a sale, exchange or other disposition of the securities, unless the U.S. Holder provides proof of an applicable exemption from the information reporting rules.

Tax Consequences to Non-U.S. Holders

Morgan Stanley Finance LLC

Contingent Income Auto-Callable Securities due February 3, 2020, with 9-month Initial Non-Call Period

All Payments on the Securities Based on the Worst Performing of the iShares[®] MSCI Emerging Markets ETF and the S&P 500[®] Index

Principal at Risk Securities

This section applies to you only if you are a Non-U.S. Holder. As used herein, the term “Non-U.S. Holder” means a beneficial owner of a security that is for U.S. federal income tax purposes:

- an individual who is classified as a nonresident alien;
- a foreign corporation; or
- a foreign estate or trust.

The term “Non-U.S. Holder” does not include any of the following holders:

- a holder who is an individual present in the United States for 183 days or more in the taxable year of disposition and who is not otherwise a resident of the United States for U.S. federal income tax purposes;
- certain former citizens or residents of the United States; or
- a holder for whom income or gain in respect of the securities is effectively connected with the conduct of a trade or business in the United States.

Such holders should consult their tax advisers regarding the U.S. federal income tax consequences of an investment in the securities.

Although significant aspects of the tax treatment of each security are uncertain, we intend to withhold on any coupon paid to a Non-U.S. Holder generally at a rate of 30% or at a reduced rate specified by an applicable income tax treaty under an “other income” or similar provision. We will not be required to pay any additional amounts with respect to amounts withheld. In order to claim an exemption from, or a reduction in, the 30% withholding tax, a Non-U.S.

Holder of the securities must comply with certification requirements to establish that it is not a U.S. person and is eligible for such an exemption or reduction under an applicable tax treaty. If you are a Non-U.S. Holder, you should consult your tax adviser regarding the tax treatment of the securities, including the possibility of obtaining a refund of any withholding tax and the certification requirement described above.

Section 871(m) Withholding Tax on Dividend Equivalents

Section 871(m) of the Code and Treasury regulations promulgated thereunder (“Section 871(m)”) generally impose a 30% (or a lower applicable treaty rate) withholding tax on dividend equivalents paid or deemed paid to Non-U.S. Holders with respect to certain financial instruments linked to U.S. equities or indices that include U.S. equities (each, an “Underlying Security”). Subject to certain exceptions, Section 871(m) generally applies to securities that substantially replicate the economic performance of one or more Underlying Securities, as determined based on tests set forth in the applicable Treasury regulations (a “Specified Security”). However, pursuant to an IRS notice, Section 871(m) will not apply to securities issued before January 1, 2019 that do not have a delta of one with respect to any Underlying Security. Based on our determination that the securities do not have a delta of one with respect to any Underlying Security, our counsel is of the opinion that the securities should not be Specified Securities and, therefore, should not be subject to Section 871(m).

Our determination is not binding on the IRS, and the IRS may disagree with this determination. Section 871(m) is complex and its application may depend on your particular circumstances, including whether you enter into other transactions with respect to an Underlying Security. If Section 871(m) withholding is required, we will not be required to pay any additional amounts with respect to the amounts so withheld. You should consult your tax adviser regarding the potential application of Section 871(m) to the securities.

U.S. Federal Estate Tax

Individual Non-U.S. Holders and entities the property of which is potentially includible in such an individual’s gross estate for U.S. federal estate tax purposes (for example, a trust funded by such an individual and with respect to which the individual has retained certain interests or powers) should note that, absent an applicable treaty exemption, the securities may be treated as U.S.-situs property subject to U.S. federal estate tax. Prospective investors that are non-U.S. individuals, or are entities of the type described above, should consult their tax advisers regarding the U.S. federal estate tax consequences of an investment in the securities.

Backup Withholding and Information Reporting

Information returns will be filed with the IRS in connection with any coupon payment and may be filed with the IRS in connection with the payment at maturity on the securities and the payment of proceeds from a sale, exchange or other disposition. A Non-U.S. Holder may be subject to backup withholding in respect of amounts paid to the Non-U.S. Holder, unless such Non-U.S. Holder complies with certification procedures to establish that it is not a U.S. person for U.S. federal income tax purposes or otherwise establishes an exemption. The amount of any backup withholding from a payment to a Non-U.S. Holder will be allowed as a credit against the Non-U.S. Holder's U.S. federal income tax liability and may entitle the Non-U.S. Holder to a refund, provided that the required information is timely furnished to the IRS.

FATCA

Legislation commonly referred to as "FATCA" generally imposes a withholding tax of 30% on payments to certain non-U.S. entities (including financial intermediaries) with respect to certain financial instruments, unless various U.S. information reporting and due diligence requirements have been satisfied. An intergovernmental agreement between the United States and the non-U.S. entity's jurisdiction may modify these requirements. FATCA generally applies to certain financial instruments that are treated as paying U.S.-source interest or other U.S.-source "fixed or determinable annual or periodical" income ("FDAP income"). Withholding (if applicable) applies to payments of U.S.-source FDAP income and, for dispositions after December 31, 2018, to payments of gross proceeds of the disposition (including upon retirement) of certain financial instruments treated as providing for U.S.-source interest or dividends. While the treatment of the securities is unclear, you should assume that any coupon payment with respect to the securities will be subject to the FATCA rules. It is also possible in light of this uncertainty that an applicable withholding agent will treat gross proceeds of a disposition (including upon retirement) of the securities after 2018 as being subject to the FATCA rules. If withholding applies to the securities, we will not be required to pay any additional amounts with respect to amounts withheld. Both U.S. and Non-U.S. Holders should consult their tax advisers regarding the potential application of FATCA to the securities.

The discussion in the preceding paragraphs, insofar as it purports to describe provisions of U.S. federal income tax laws or legal conclusions with respect thereto, constitutes the full opinion of Davis Polk & Wardwell LLP regarding the material U.S. federal tax consequences of an investment in the securities.

Trustee: The Bank of New York Mellon

Calculation agent: MS & Co.

The proceeds from the sale of the securities will be used by us for general corporate purposes. We will receive, in aggregate, \$1,000 per security issued, because, when we enter into hedging transactions in order to meet our obligations under the securities, our hedging counterparty will reimburse the cost of the agent's commissions. The costs of the securities borne by you and described beginning on page 3 above comprise the agent's commissions and the cost of issuing, structuring and hedging the securities.

Use of proceeds and hedging:

On or prior to the pricing date, we expect to hedge our anticipated exposure in connection with the securities by entering into hedging transactions with our affiliates and/or third-party dealers. We expect our hedging counterparties to take positions in the EEM Shares, in stocks constituting the share underlying index or the SPX Index, in futures and/or options contracts on the EEM Shares, the share underlying index, the SPX Index or their component stocks listed on major securities markets, or positions in any other available securities or instruments that they may wish to use in connection with such hedging. Such purchase activity could potentially increase the initial level of an underlying, and, as a result, increase (i) the level at or above which such underlying must close on any redemption determination date so that the securities are redeemed prior to maturity for the early redemption payment (depending also on the performance of the other underlying), (ii) the coupon barrier level for such underlying, which is the level at or above which such underlying must close on each observation date in order for you to earn a contingent quarterly coupon (depending also on the performance of the other underlying), and (iii) the downside threshold level for such underlying, which is the level at or above which such underlying must close on each trading day or index business day, as applicable, during the term of the securities so that you are not exposed to the negative performance of the worst performing underlying at maturity (depending also on the

Principal at Risk Securities

performance of the other underlying). These entities may be unwinding or adjusting hedge positions during the term of the securities, and the hedging strategy may involve greater and more frequent dynamic adjustments to the hedge as the final observation date approaches. Additionally, our hedging activities, as well as our other trading activities, during the term of the securities could potentially affect the value of an underlying throughout the term of the securities, and, accordingly, whether we redeem the securities prior to maturity, whether we pay a contingent quarterly coupon on the securities and the amount of cash you receive at maturity, if any (depending also on the performance of the other underlying).

Benefit plan investor considerations:

Each fiduciary of a pension, profit-sharing or other employee benefit plan subject to Title I of the Employee Retirement Income Security Act of 1974, as amended (“ERISA”) (a “Plan”), should consider the fiduciary standards of ERISA in the context of the Plan’s particular circumstances before authorizing an investment in the securities. Accordingly, among other factors, the fiduciary should consider whether the investment would satisfy the prudence and diversification requirements of ERISA and would be consistent with the documents and instruments governing the Plan.

In addition, we and certain of our affiliates, including MS & Co., may each be considered a “party in interest” within the meaning of ERISA, or a “disqualified person” within the meaning of the Internal Revenue Code of 1986, as amended (the “Code”), with respect to many Plans, as well as many individual retirement accounts and Keogh plans (such accounts and plans, together with other plans, accounts and arrangements subject to Section 4975 of the Code, also “Plans”). ERISA Section 406 and Code Section 4975 generally prohibit transactions between Plans and parties in interest or disqualified persons. Prohibited transactions within the meaning of ERISA or the Code would likely arise, for example, if the securities are acquired by or with the assets of a Plan with respect to which MS & Co. or any of its affiliates is a service provider or other party in interest, unless the securities are acquired pursuant to an exemption from the “prohibited transaction” rules. A violation of these “prohibited transaction” rules could result in an excise tax or other liabilities under ERISA and/or Section 4975 of the Code for those persons, unless exemptive relief is available under an applicable statutory or administrative exemption.

The U.S. Department of Labor has issued five prohibited transaction class exemptions (“PTCEs”) that may provide exemptive relief for direct or indirect prohibited transactions resulting from the purchase or holding of the securities. Those class exemptions are PTCE 96-23 (for certain transactions determined by in-house asset managers), PTCE 95-60 (for certain transactions involving insurance company general accounts), PTCE 91-38 (for certain transactions involving bank collective investment funds), PTCE 90-1 (for certain transactions involving insurance company separate accounts) and PTCE 84-14 (for certain transactions determined by independent

qualified professional asset managers). In addition, ERISA Section 408(b)(17) and Code Section 4975(d)(20) provide an exemption for the purchase and sale of securities and the related lending transactions, *provided* that neither the issuer of the securities nor any of its affiliates has or exercises any discretionary authority or control or renders any investment advice with respect to the assets of the Plan involved in the transaction and *provided further* that the Plan pays no more, and receives no less, than “adequate consideration” in connection with the transaction (the so-called “service provider” exemption). There can be no assurance that any of these class or statutory exemptions will be available with respect to transactions involving the securities.

Because we may be considered a party in interest with respect to many Plans, the securities may not be purchased, held or disposed of by any Plan, any entity whose underlying assets include “plan assets” by reason of any Plan’s investment in the entity (a “Plan Asset Entity”) or any person investing “plan assets” of any Plan, unless such purchase, holding or disposition is eligible for exemptive relief, including relief available under PTCEs 96-23, 95-60, 91-38, 90-1, 84-14 or the service provider exemption or such purchase, holding or disposition is otherwise not prohibited. Any purchaser, including any fiduciary purchasing on behalf of a Plan, transferee or holder of the securities will be deemed to have represented, in its corporate and its fiduciary capacity, by its purchase and holding of the securities that either (a) it is not a Plan or a Plan Asset Entity and is not purchasing such securities on behalf of or with “plan assets” of any Plan or with any assets of a governmental, non-U.S. or church plan that is subject to any federal, state, local or non-U.S. law that is substantially similar to the provisions of Section 406 of ERISA or Section 4975 of the Code (“Similar Law”) or (b) its purchase, holding and disposition of these securities will not constitute or result in a non-exempt prohibited transaction under Section 406 of ERISA or Section 4975 of the Code or

Principal at Risk Securities

violate any Similar Law.

Due to the complexity of these rules and the penalties that may be imposed upon persons involved in non-exempt prohibited transactions, it is particularly important that fiduciaries or other persons considering purchasing the securities on behalf of or with “plan assets” of any Plan consult with their counsel regarding the availability of exemptive relief.

The securities are contractual financial instruments. The financial exposure provided by the securities is not a substitute or proxy for, and is not intended as a substitute or proxy for, individualized investment management or advice for the benefit of any purchaser or holder of the securities. The securities have not been designed and will not be administered in a manner intended to reflect the individualized needs and objectives of any purchaser or holder of the securities.

Each purchaser or holder of any securities acknowledges and agrees that:

(i) the purchaser or holder or its fiduciary has made and shall make all investment decisions for the purchaser or holder and the purchaser or holder has not relied and shall not rely in any way upon us or our affiliates to act as a fiduciary or adviser of the purchaser or holder with respect to (A) the design and terms of the securities, (B) the purchaser or holder’s investment in the securities, or (C) the exercise of or failure to exercise any rights we have under or with respect to the securities;

(ii) we and our affiliates have acted and will act solely for our own account in connection with (A) all transactions relating to the securities and (B) all hedging transactions in connection with our obligations under the securities;

(iii) any and all assets and positions relating to hedging transactions by us or our affiliates are assets and positions of those entities and are not assets and positions held for the benefit of the purchaser or holder;

(iv) our interests are adverse to the interests of the purchaser or holder; and

(v) neither we nor any of our affiliates is a fiduciary or adviser of the purchaser or holder in connection with any such assets, positions or transactions, and any information that we or any of our affiliates may provide is not intended to be impartial investment advice.

Each purchaser and holder of the securities has exclusive responsibility for ensuring that its purchase, holding and disposition of the securities do not violate the prohibited transaction rules of ERISA or the Code or any Similar Law. The sale of any securities to any Plan or plan subject to Similar Law is in no respect a representation by us or any of our affiliates or representatives that such an investment meets all relevant legal requirements with respect to investments by plans generally or any particular plan, or that such an investment is appropriate for plans generally or any particular plan. In this regard, neither this discussion nor anything provided in this document is or is intended to be investment advice directed at any potential Plan purchaser or at Plan purchasers generally and such purchasers of these securities should consult and rely on their own counsel and advisers as to whether an investment in these securities is suitable.

However, individual retirement accounts, individual retirement annuities and Keogh plans, as well as employee benefit plans that permit participants to direct the investment of their accounts, will not be permitted to purchase or hold the securities if the account, plan or annuity is for the benefit of an employee of Morgan Stanley, Morgan Stanley Wealth Management or a family member and the employee receives any compensation (such as, for example, an addition to bonus) based on the purchase of the securities by the account, plan or annuity.

Additional considerations:

Client accounts over which Morgan Stanley, Morgan Stanley Wealth Management or any of their respective subsidiaries have investment discretion are **not** permitted to purchase the securities, either directly or indirectly.

Selected dealers, which may include our affiliates, and their financial advisors will collectively receive from the agent a fixed sales commission of \$ for each security they sell; provided that dealers selling to investors purchasing the securities in fee-based advisory accounts will receive a sales commission of \$ per security.

Supplemental information regarding plan of distribution;

conflicts of interest: MS & Co. is an affiliate of MSFL and a wholly owned subsidiary of Morgan Stanley, and it and other affiliates of ours expect to make a profit by selling, structuring and, when applicable,
