How secure is my information online? To ensure security, we encrypt all information between your PC and GE Interest Plus. Using secured browsers and 128-bit encryption technology, you can be assured security is our number one priority. In fact, 128-bit encryption is one of the highest levels of encryption currently available. 128-bit encryption is the process of scrambling information (typically for data transmission) so that only someone who has the correct encryption key can reassemble it in its original clear text format. When used between you and GE Interest Plus, this encryption technology allows you to encode (or encrypt) your personal information as you send it to us. Only GE Interest Plus can decrypt it. Likewise, when we send personal or account information to you, this technology allows us to encode it, and only you can decode it. In the box below, you will be able to see whether the browser you are currently using has 128-bit encryption. If it is noted that your browser does not have 128-bit encryption, please go to the section labeled Download a browser with 128-bit encryption. It is essential that you upgrade your browser before you enter Online Access.
